It focuses on delivering satisfying experiences by quickly and effectively addressing user needs and service issues.</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>Service Design and Development: This section of the exam measures the skills of Service Designers and covers how to design and develop services that align with both customer needs and business objectives. It includes identifying and defining service requirements, designing service components, and ensuring service quality throughout the development lifecycle.</li> </ul>

## ITIL 4 Specialist: Create, Deliver and Support Exam Sample Questions (Q11-Q16):

### NEW QUESTION # 11

An organization is writing its test strategy in order to define the test levels and test types that are in scope for testing. In the past, the organization has experienced service disruptions after some releases of a particular application. These disruptions were happening because the application caused other applications to generate errors.

Which test level should the organization focus on to address this weakness?

- A. Integration
- B. System
- C. Unit
- D. Acceptance

**Answer: A**

Explanation:

Integration testing focuses on verifying how different applications and components work together, helping to identify and prevent errors that occur when the new application affects other systems.

### NEW QUESTION # 12

A service desk team acts as a single point of contact for its users. Service desk team members are the first-line support; however, if they are unable to resolve the incidents, they are escalated to second-line support. This tiered support structure has resulted in large queues of unresolved tickets. Which concept or approach would help the organization resolve this situation?

- A. Results-based measurement
- B. Advanced analytics
- C. Outsourcing

- D. **Swarming**

**Answer: D**

Explanation:

The concept of swarming would help resolve this situation (D). The ITIL 4 Specialist: Create, Deliver and Support documentation (Section 4.3.5) defines swarming as: "A collaborative approach where multiple team members, including first- and second-line support, work together on an incident simultaneously to resolve it quickly, reducing queue buildup." This contrasts with the tiered structure's escalation delays. Option A focuses on metrics; option B aids analysis; and option C shifts work externally, none addressing queue reduction directly. The guide notes: "Swarming enhances resolution times by leveraging collective expertise." Reference: ITIL 4 Specialist: Create, Deliver and Support, Section 4.3.5 - Swarming in Incident Management.

**NEW QUESTION # 13**

A small food retail chain was created twenty years ago. At that time, stock management and point of sale (POS) software was developed and maintained by an internal IT team. Today the chain is using commercial software available off-the-shelf for stock management and POS. What is this situation an example of?

- A. Service components lacking mass-market adoption
- **B. Commoditization of service components**
- C. Customer demand for personalized products
- D. Organization-specific requirements for service functionality

**Answer: B**

Explanation:

This situation is an example of commoditization of service components (A). The ITIL 4 Specialist: Create, Deliver and Support study guide (Section 3.2.1) states: "Commoditization occurs when services or components, once custom-built, become standardized and available off-the-shelf, reducing the need for internal development." The shift from custom to commercial software reflects this trend, aligning with value stream efficiency. Option B applies to custom needs; option C relates to customer preferences; and option D contradicts the scenario. The guide adds: "Commoditization supports cost reduction and scalability." Reference: ITIL 4 Specialist: Create, Deliver and Support, Section 3.2.1 - Commoditization of Services.

**NEW QUESTION # 14**

A service provider is aiming to optimize service management activities to ensure high quality of services and eliminate waste. Each practice and team have been working on continual improvement and implemented a large number of improvements. However, improvement in overall efficiency and in service quality has been lower than expected. What is the BEST approach for the service provider to take to resolve this?

- **A. Use value stream mapping to analyze and optimize end-to-end workflows**
- B. Implement Agile methods to improve software development
- C. Implement the continual improvement model for all teams to follow
- D. Use automation to optimize service value streams

**Answer: A**

Explanation:

The best approach is to use value stream mapping to analyze and optimize end-to-end workflows (B). The ITIL 4 Specialist: Create, Deliver and Support study guide (Section 2.3.2) states: "Value stream mapping provides a holistic view of workflows, identifying waste and inefficiencies across practices, even when individual improvements are in place, to enhance overall service quality and efficiency." This addresses the disconnect between team-level efforts and system-wide results, unlike option A (already in use), option C (a tool, not a strategy), or option D (software-specific). The guide adds: "Mapping ensures alignment of improvements with value stream goals." Reference: ITIL 4 Specialist: Create, Deliver and Support, Section 2.3.2 - Value Stream Mapping for Optimization.

**NEW QUESTION # 15**

Which is often included in an Agile approach to software development?

- A. Integrated service management toolsets

- B. Information models
- C. Advanced analytics
- D. CI/CD

**Answer: D**

Explanation:

CI/CD (Continuous Integration/Continuous Delivery) is often included in an Agile approach to accelerate and automate software development, testing, and deployment.

## NEW QUESTION # 16

.....

If you're still learning from the traditional old ways and silently waiting for the test to come, you should be awake and ready to take the exam in a different way.
