An organization uses tape libraries in their current backup infrastructure. They have purchased a PowerProtect DD system and plan to use VTL to move from tape.

What is a consideration when configuring the tape size?

- A. Target multiple drives to write single stream
- B. Target single drives to write multiple streams
- C. Set retention periods for as long as possible
- D. Use smaller tapes for smaller datasets

NEW QUESTION # 47

If ES40 SAS shelves are on the same chain as a DS60, what is the maximum number of possible shelves on that chain?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

Explanation: When configuring a chain with ES40 SAS shelves and DS60 shelves in a PowerProtect DD environment, the maximum allowable number of shelves on that chain is three. This limitation is due to compatibility and bandwidth requirements for maintaining optimal performance and reliability across the SAS chain. Mixing different shelf models (ES40 and DS60) in a single chain affects the maximum supported configuration, and following this limitation ensures that the data transfer speeds and stability are not compromised.

NEW QUESTION # 48

Which is the correct implementation order for a VTL environment?

□

Answer:

Explanation:

□

Explanation:

The correct order for implementing a Virtual Tape Library (VTL) environment on a PowerProtect DD appliance is as follows:

- * Add an HBA card in the PowerProtect DD appliance.
- * License and enable the VTL service on the PowerProtect DD appliance.
- * Create a VTL with its components and virtual tapes on the PowerProtect DD appliance.
- * Create the configuration for the tape library, slots, and tapes.
- * Configure Fibre Channel zoning for use with the PowerProtect DD appliance.

- * Discover the VTL on the PowerProtect DD appliance.
 - * Add an HBA Card: The Host Bus Adapter (HBA) card is required to connect the PowerProtect DD appliance to the Fibre Channel network, which is essential for the VTL configuration.
 - * License and Enable VTL Service: The VTL functionality needs to be licensed and enabled on the PowerProtect DD appliance to allow the configuration of virtual tape drives and libraries.
 - * Create the VTL: This involves setting up the virtual tape library components and creating virtual tapes on the appliance, establishing a simulated tape environment.
 - * Configure Tape Library Settings: Set up the logical structure of the tape library, including the number of slots, tape drives, and tapes, as this information is critical for the backup application.
 - * Configure Fibre Channel Zoning: Proper zoning must be configured in the Fibre Channel environment to ensure the backup servers can access the virtual tape drives and libraries on the PowerProtect DD appliance.
 - * Discover the VTL: After setting up the environment, discover the VTL on the PowerProtect DD appliance to make it available for backup operations.
- This ordered process ensures a structured and functional VTL setup within the PowerProtect DD environment, enabling optimized data protection workflows.
