## ISQI ISTQB Certified Tester Advanced Level, Test Automation Engineering Sample Questions (Q58-Q63):

### NEW QUESTION # 58

You identified a suitable project to pilot an automation tool and planned and conducted a pilot. The pilot has been successful and tool is being deployed within your organization, with a plan to increase tool use by the one project at a time. During this rollout some test processes will be changed slightly to gain additional benefits from using the tool.

In the pilot project, a small set of manual tests were automated for the first time. You are currently monitoring the test automation efficiency and this reveals that the automation regime for the tests is not yet mature.

Which of the following statements is TRUE?

- A. The target defined for the project was inappropriate, because the automation regime for the automated tests at the end of the pilot is not yet mature.
- B. The approach used for deployed this tool is aligned to the standard success factor for deployment
- **C. The test process should be radically changed to gain additional benefits from using the tool.**
- D. The pilot project should have been critical so that maximum benefits were delivered

**Answer: C**

### NEW QUESTION # 59

Which of the following information in API documentation is LEAST relevant for implementing automated tests on that API?

- A. Details about the parameters accepted by each API endpoint
- **B. Release notes/change logs on past changes to the API**
- C. Authentication mechanisms required to access the API
- D. Details about the format of the API responses

**Answer: B**

Explanation:

To implement automated API tests, TAE emphasizes that testers need precise, actionable interface specifications: what endpoints exist, what inputs they accept, how to authenticate/authorize requests, and what outputs are returned (status codes, headers, response body schemas/formats). Options B, C, and D directly support test design and implementation: parameter details enable valid/invalid request construction and boundary coverage; authentication mechanisms are required to execute any protected calls and to test auth- related behaviors; response formats enable robust assertions (including schema validation). Release notes and change logs are valuable for understanding evolution, migration, and backward compatibility considerations, but they are not typically required to implement the tests for the current API behavior when the current specification is available. They may help explain why something changed or guide test updates over time, yet they are less directly relevant to writing the core automated checks compared with endpoint inputs, auth, and response structure. Therefore, among the options, past release notes/change logs are the least relevant for implementing automated tests on the API.

### NEW QUESTION # 60

As a TAE you are evaluating a functional test automation tool that will be for several projects within your organization. The projects require that tool to work effectively and efficiently with SUT's in distributed environments. The test automated tool also needs to interface with other existing test tools (test management tool and defect tracking tool.) The existing test tools subject to planned updates and their interface to the test automated tool may not work properly after these updates.

Which of the following are the two LEAST important concerns related to the evaluation of the test automation in this scenario?

- \* Is the test automation tool able to launch processors and execute test cases on multiple machines in
- \* different environments?
- \* Does the test automation tool support a licensing scheme that allows accessing different sets?
- \* Does the test automation tool have a large feature set, but only part of the features will be sets?

\* Do the release notes for the planned updates on existing specify the impacts on their interfaces to other tools?  
Does the test automation tool need to install specific libraries that could impact the SUT?

- A. A and C
- B. C and D
- **C. B and E**
- D. A and E

**Answer: C**

#### NEW QUESTION # 61

You identified a suitable project to pilot an automation tool and planned and conducted a pilot.
