SAP C-S4CPB-2602 Reliable Test Prep & Sample C-S4CPB-2602 Exam

The users of our C-S4CPB-2602 exam questions log on to their account on the platform, at the same time to choose what they want to attend the exam simulation questions, the C-S4CPB-2602 exam questions are automatically for the user presents the same as the actual test environment simulation C-S4CPB-2602 test system, the software built-in timer function can help users better control over time, so as to achieve the systematic, keep up, as well as to improve the user's speed to solve the problem from the side with our C-S4CPB-2602 test guide.

SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602) Sample Questions (Q12-Q17):

NEW QUESTION # 12

SIMULATION

Migrate Bank Data

Business Scenario

You are responsible for migrating bank data into the SAP S/4HANA Cloud Public Edition system. You have determined the best method is Migrate Data Using Staging Tables, as you only have a couple banks to migrate.

Prerequisites:

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Use the correct app to verify your data has been migrated successfully (see the documentation for the Bank migration object).

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to use the correct SAP app to verify that the bank master data migrated in the previous task was created successfully in the target system.

The correct verification app is:

Manage Banks - Master Data

SAP's documentation for bank maintenance assigns this app to the bank master data role and uses it for maintaining and checking bank records, which matches the verification step after migration.

Business Scenario Explanation

In the previous migration tasks, you:

created the migration project,

selected the Bank migration object,

prepared and uploaded the bank data,

validated and transferred it to staging tables,
completed mapping tasks,
migrated the two bank records.

However, a migration is not considered complete until the data is verified in the target application used for ongoing business maintenance.

For the Bank migration object, that target verification app is:

Manage Banks - Master Data

This app allows you to search for the migrated banks and confirm that the data now exists in SAP S/4HANA Cloud Public Edition.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact bank values that were migrated.

Verification must be done in the correct app, not only in the migration cockpit.

The expected bank records are the two banks from the previous task.

Correct Verification App

Purpose

App

Verify migrated bank master data

Manage Banks - Master Data

SAP documents that bank master maintenance is handled through the bank master data application and the associated bank maintenance role/catalog, which is why this is the correct end-user verification app after bank migration.

Data to Verify

You should verify the two migrated banks:

Bank 1

Bank Country/Region = US

Bank Key = A#####

Bank Name = Bank of A#####

Bank 2

Bank Country/Region = US

Bank Key = Z#####

Bank Name = Bank of Z#####

Example

If your suffix is 000013, verify:

US / A000013 / Bank of A000013

US / Z000013 / Bank of Z000013

Detailed Step-by-Step Procedure

Step 1: Return to the SAP Fiori launchpad

After finishing the migration:

Go back to the SAP S/4HANA Cloud homepage.

Explanation:

The verification must be performed in the target business app, not only from the migration results screen.

Step 2: Open the app "Manage Banks - Master Data"

From the launchpad search:

Search for:

Manage Banks - Master Data

Open the app.

Explanation:

This is the correct app for checking whether the migrated bank master records now exist in the target system.

Step 3: Search for the first migrated bank

In Manage Banks - Master Data:

In Bank Country/Region, enter:

US

In Bank Key, enter:

A#####

Click Go

Example

If your suffix is 000013, search for:

Bank Country/Region = US

Bank Key = A000013

Explanation:

This checks whether the first migrated bank was created successfully.

Step 4: Verify the first bank details

Confirm that the search result shows the correct bank record:

Bank Country/Region = US

Bank Key = A#####

Bank Name = Bank of A#####

You can also verify address data if visible, such as:

Street = West Chester Pike

City = Newtown Square

Explanation:

This confirms that the first bank master record exists in the target system after migration.

Step 5: Search for the second migrated bank

Clear or update the search criteria and enter:

Bank Country/Region = US

Bank Key = Z#####

Click Go

Example

If your suffix is 000013, search for:

Bank Country/Region = US

Bank Key = Z000013

Explanation:

This checks whether the second migrated bank was created successfully.

Step 6: Verify the second bank details

Confirm that the second search result shows:

Bank Country/Region = US

Bank Key = Z#####

Bank Name = Bank of Z#####

You can also verify address data if visible, such as:

Street = Lenox Road

City = Atlanta

Explanation:

This confirms that the second bank master record exists in the target system after migration.

Step 7: Confirm successful verification

If both banks are visible in Manage Banks - Master Data, the migration verification is successful.

Explanation:

This is the final proof that the migration did not only complete technically in the cockpit, but also posted the expected business data into the target application.

Expected Result

After this task is completed successfully:

the app Manage Banks - Master Data is used for verification,

Bank 1 is visible:

US / A##### / Bank of A#####

Bank 2 is visible:

US / Z##### / Bank of Z#####

the migrated bank data is confirmed as successfully created in the target system.

NEW QUESTION # 13

SIMULATION

Set up an Integration Scenario

Business Scenario

You are responsible for setting up the Bank Integration with File Interface (1EG). During an actual implementation, you would first download the Set-up Instructions for the business process from SAP Signavio Process Navigator. In this practical exam, all the information will be provided to you, so you do not need to download the Set-up Instructions.

Prerequisites

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Your Task

Create a Communication System with the information listed below and save.

Parameter	Value
System ID	1EG_SYSTEM_#####
System Name	Bank Integration with File Interface
Host Name	DUMMY
Users for Inbound Communication	Select previously created user (1EG_COMM_USER_#####)

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a Communication System for the integration scenario Bank Integration with File Interface (1EG).

This communication system will later be used in the communication arrangement and will reference the communication user created in the previous task.

Business Scenario Explanation

In this scenario, you are setting up:

Bank Integration with File Interface (1EG)

In SAP S/4HANA Cloud, the technical setup typically requires:

a Communication User

a Communication System

a Communication Arrangement

In Task 13, you created the communication user.

In Task 14, you now create the communication system and link that previously created communication user for inbound communication.

The communication system represents the external or technical integration partner definition used in the scenario.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values shown in the task.

Do not change capitalization, underscores, or spacing.

The communication user assigned in this task must be the one created in the previous step:

1EG_COMM_USER_#####

Required Values

Use the following values exactly as shown in the task image.

Parameter	Value
System ID	1EG_SYSTEM_#####
System Name	Bank Integration with File Interface
Host Name	DUMMY
Users for Inbound Communication	Select previously created user (1EG_COMM_USER_#####)

Example

If your suffix is 000013, then the values become:

System ID = 1EG_SYSTEM_000013

System Name = Bank Integration with File Interface

Host Name = DUMMY

Inbound Communication User = 1EG_COMM_USER_000013

Step 1: Open the app "Communication Systems"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the search bar or app finder.

Search for:

Communication Systems

Open the app.

Explanation:

This app is used to create and maintain technical communication systems for integration scenarios.

Because the task explicitly asks to create a Communication System, this is the correct app.

Step 2: Start creating a new Communication System

Inside the Communication Systems app:

Click:

New

Explanation:

This starts the creation of a new communication system record.

Step 3: Enter the System ID

In the communication system creation screen, enter:

System ID = 1EG_SYSTEM_#####

Example

If your suffix is 000013, enter:

1EG_SYSTEM_000013

Explanation:

This is the technical ID of the communication system.

It must exactly match the task requirement.

Step 4: Enter the System Name

In the System Name field, enter exactly:

Bank Integration with File Interface

Explanation:

This is the descriptive name of the communication system and must be entered exactly as provided.

Step 5: Enter the Host Name

In the Host Name field, enter exactly:

DUMMY

Explanation:

For this simulation, the host is not a real productive endpoint.

The task explicitly requires the placeholder value DUMMY.

Step 6: Maintain the inbound communication user

Locate the section for:

Users for Inbound Communication

Then:

Click Add or select the entry field/value help

Choose the communication user created in the previous task:

1EG_COMM_USER_#####

Example

If your suffix is 000013, select:

1EG_COMM_USER_000013

Explanation:

This is a critical link between the communication user and the communication system.

Without assigning the previously created communication user, the communication system setup is incomplete.

Step 7: Verify the inbound user assignment

After adding the inbound communication user, confirm that the selected user is:

1EG_COMM_USER_#####

Explanation:

This confirms that the system will use the correct technical user for inbound communication in the later communication arrangement.

Step 8: Review all entered values

Before saving, check the following:

System ID = 1EG_SYSTEM_#####

System Name = Bank Integration with File Interface

Host Name = DUMMY

Users for Inbound Communication = 1EG_COMM_USER_#####

Explanation:

This review helps avoid validation issues caused by incorrect naming, missing underscores, or selecting the wrong communication user.

Step 9: Save the Communication System

Click:

Save

Explanation:

This finalizes the creation of the communication system.

Without saving, the communication system will not exist for the next task.

Step 10: Verify the saved Communication System

After saving, confirm that the communication system exists and displays the correct values:

1EG_SYSTEM_#####

Bank Integration with File Interface

Host = DUMMY

inbound user = 1EG_COMM_USER_#####

Explanation:

This confirms the system is successfully created and ready for the communication arrangement setup in the next step.

Expected Result

After this task is completed successfully:

the communication system exists,

the system ID matches the required naming pattern,

the system name is correct,

the host name is DUMMY,

the previously created communication user is assigned for inbound communication, the system is saved successfully.

NEW QUESTION # 14

SIMULATION

Create a Custom Business Role with Restrictions

Business Scenario:

You are building a custom business role with restrictions to ensure the end users assigned the role have only the minimum level of access necessary to complete their core job tasks. The end users are project managers based in the United States. They should only be able to create projects, edit projects, and access projects that are occurring in the United States. They should not be able to staff any resources outside of the United States. Write, Read, and Value Help access should be restricted to only the United States for all relevant fields.

Prerequisites:

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note: Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Restrict the fields listed below for the US / 1710. All other fields should be marked as Not Maintained. Save the role when finished.

Restriction Name	Restriction Type	Restriction Value
Bank Country/Region Key	Read, Value Help	US
Bank Country/Region Key	Value Help	US
Company Code	Write, Read, Value Help	1710
Company Code	Read, Value Help	1710
Purchasing Organization	Write, Read, Value Help	1710
Purchasing Organization	Read, Value Help	1710
Purchasing Organization	Value Help	1710
Valuation Area	Read, Value Help	1710
Valuation Area	Value Help	1710

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Task 7: Restrict the Custom Business Role for US / 1710 and Mark All Other Fields as Not Maintained Objective The purpose of this task is to maintain the restriction values of the custom business role created in the previous task so that project managers only have the minimum access required for their work in the United States.

This task is performed on the custom business role created from the template:

Template Role: SAP_BR_PROJECT_MANAGER_PROF

Custom Role Example Pattern: BR_PROJECT_MANAGER_PROF_US_#####

The task requires you to:

maintain only the listed restriction fields,
enter the exact required values for US and 1710,
set all other restriction fields to Not Maintained,
and save the role.

Business Scenario Explanation

This restriction setup is what makes the new custom role safe and fit for purpose.

The business requirement says that end users:

are project managers based in the United States,
should only access relevant US project data,
should not be able to staff or work outside the intended scope,
should only see and maintain data for the allowed organizational scope.

This is achieved by limiting the role to:

US for country-related fields

1710 for company / organizational fields

Everything else must be Not Maintained so that unnecessary access is not left open.

Important Notes

Replace ##### with the last 6 digits of your group number.

Use the values exactly as shown.

Maintain only the fields listed in the table.

Set all other restriction fields to Not Maintained.

Do not leave unrelated fields blank while still restricted.

Restricted + blank is usually wrong.

Not Maintained is the correct setting for all unrelated fields.

Required Restriction Values

Use the following values exactly as shown in your task screenshot.

Restriction Name	Restriction Type	Restriction Value
Bank Country/Region Key	Read, Value Help	US
Bank Country/Region Key	Value Help	US
Company Code	Write, Read, Value Help	1710
Company Code	Read, Value Help	1710
Purchasing Organization	Write, Read, Value Help	1710
Purchasing Organization	Read, Value Help	1710
Purchasing Organization	Value Help	1710
Valuation Area	Read, Value Help	1710
Valuation Area	Value Help	1710

That means:

Country restriction = US

Org/company restrictions = 1710

Detailed Step-by-Step Procedure

Step 1: Open the app "Maintain Business Roles"

From the SAP S/4HANA Cloud launchpad:

Log in to the system.

Search for:

Maintain Business Roles

Open the app.

Explanation:

This app is where the custom role was created in the previous task and where its restrictions are maintained.

Step 2: Open your custom Project Manager US role

In Maintain Business Roles:

Search for your custom role.

Open the role with ID pattern:

BR_PROJECT_MANAGER_PROF_US_#####

Example

If the suffix is 000457, then the role is:

BR_PROJECT_MANAGER_PROF_US_000457

Explanation:

You must open the custom role, not the standard SAP template role.

The restrictions belong to the derived custom role only.

Step 3: Confirm the correct custom role is open

Check the role details and confirm:

the business role ID matches your custom role,

the description matches the US-specific project manager role,

the role is based on template SAP_BR_PROJECT_MANAGER_PROF.

Explanation:

This avoids accidentally changing the wrong role.

Step 4: Click "Maintain Restrictions"

On the custom role page:

Click:

Maintain Restrictions

Explanation:

This opens the detailed restriction maintenance area where access categories and field-level values are controlled.

Step 5: Set the access categories for restriction maintenance

On the restriction page, ensure the access categories are maintained as required for the role.

During your run, these categories were maintained as restricted so values could be entered for the listed fields.

Explanation:

Restriction values can only be maintained correctly when the role is in the right restriction mode.

This step prepares the role so the listed fields can be populated with US / 1710 values.

Step 6: Understand the rule before entering values

This task uses a strict rule:

Keep maintained

Only the fields explicitly listed in the table should be maintained with values.

Set to Not Maintained

Every other restriction field not listed in the table must be marked:

Not Maintained

Explanation:

This is the most important logic in the whole task.

If a field is unrelated and still left as restricted or blank, it can cause validation problems or give more access than intended.

Part A: Maintain the required restriction fields

Step 7: Maintain Bank Country/Region Key

Search for:

Bank Country/Region Key

Then maintain:

Read, Value Help = US

Value Help = US

Explanation:

This ensures the user can only read and search bank-related values for the United States.

General

Values Business Catalogs IAM Apps

General Company Code X Q All Restrictions Undefined Restriction Unrestricted Access Leading Not Maintained

☐ Restrictions and Values

Company Code

☐ Read, Value Help ☐ Leading Restriction

☐ Value Help ☐ Leading Restriction

Step 9: Maintain Purchasing Organization

Search for:

Purchasing Organization

Then maintain:

Write, Read, Value Help = 1710

Read, Value Help = 1710

Value Help = 1710

Explanation:

This ensures all purchasing-organization-related access for the role is limited to organizational value 1710.

Step 10: Maintain Valuation Area

Search for:

Valuation Area

Then maintain:

Read, Value Help = 1710

Value Help = 1710

Explanation:

This limits valuation-related access to the intended organizational scope.

Part B: Set all other fields to Not Maintained

Step 11: Search through the other restriction fields

After entering the required fields, review the remaining restriction objects.

Examples from your run included fields such as:

Accounting Principle

Authorization Group for Business Partners

Billing Type

and many other unrelated restriction fields

Explanation:

These fields were not listed in the task table, so they must not stay restricted.

Step 12: Mark unrelated fields as Not Maintained

For each field not listed in the required table:

Open the field setting / restriction dialog.

Choose:

Not Maintained

Important examples

From your run:

Accounting Principle → Not Maintained

Authorization Group for Business Partners → Not Maintained

Billing Type → Not Maintained

Explanation:

These fields are outside the required US / 1710 restriction list.

If you leave them restricted without a required value, the setup is incorrect.

Step 13: Do not mark the listed fields as Not Maintained

The following must stay maintained with values because they are in the required table:

Bank Country/Region Key

Company Code

Purchasing Organization

Valuation Area

Explanation:

Only the unrelated fields become Not Maintained.

The listed fields must remain restricted with the required values.

Step 14: Save the role

After all required fields are maintained and all other fields are marked Not Maintained:

Click Save

Explanation:

This finalizes the role restrictions.

Without saving, the restriction changes remain incomplete.

Step 15: Verify the restriction result

After saving, verify that:

required fields contain US and 1710 exactly as defined,

unrelated fields are no longer restricted,

the role saves without error.

Explanation:

This is your final proof that the restricted custom role has been completed correctly.

Expected Result

After the task is completed successfully:

the custom role remains based on SAP_BR_PROJECT_MANAGER_PROF,

required US / 1710 restriction fields are maintained,

all unrelated restriction fields are marked Not Maintained,

the role is saved successfully,

the role now reflects minimum necessary access for US-based project managers.

NEW QUESTION # 15

SIMULATION

Create a Custom Launchpad Space and Page

Business Scenario

You are building a custom business role that will be assigned to all employees in the organization. The business role and its corresponding Launchpad Space and Page need to include the apps that have been granted through the business catalogs assigned to the business role to ensure employees have an easy time finding the relevant applications.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Assign the business role to your user and save. Then refresh the browser and navigate home to verify the new Launchpad Space and tiles are visible.

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to assign the newly created custom all-employee business role to your own business user, save the assignment, refresh the browser, and then verify that the new Launchpad Space and its tiles are visible on the homepage.

This is the final verification step for the all-employee role and launchpad setup.

Business Scenario Explanation

In the previous tasks, you created and configured:

a new custom business role for all employees,

the required business catalogs,

a custom launchpad space,

a custom launchpad page,

and the employee self-service tiles:

Manage My Timesheet

Concur Travel Expense

However, even if all of that is configured correctly, you still will not see the new page and tiles on your homepage until the custom role is assigned to your own business user.

This task connects the configuration to your user and verifies the final end-user result.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact business role ID.

Save the user after adding the role.

Refresh the browser after saving.

Then navigate back to Home and confirm the space/page/tiles are visible.

Required Business Role

Assign the custom all-employee role created earlier:

Business Role ID: Z_EMPLOYEES_ALL_#####

Business Role Description: All Employee Role #####

Example

If your suffix is 000013, the role is:

Z_EMPLOYEES_ALL_000013

Detailed Step-by-Step Procedure

Step 1: Open the app "Maintain Business Users"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Search for:

Maintain Business Users

Open the app.

Explanation:

This app is used to assign business roles to users.

The launchpad space and tiles will only become visible after the custom role is assigned to your own user.

Step 2: Search for your own business user

In Maintain Business Users:

Enter your own user name or business user ID in the search field.

Click Go.

Explanation:

You must assign the role to your own user because you are the one who will verify the launchpad result on the homepage.

Step 3: Open your user record

From the search results:

Click your user entry.

Open the user details page.

Explanation:

This opens the maintenance page where assigned business roles can be reviewed and changed.

Step 4: Switch to Edit mode

On the business user page:

Click Edit

Explanation:

Without edit mode, the role assignment list is display-only.

Step 5: Open the "Assigned Business Roles" tab

Inside the user record:

Click:

Assigned Business Roles

Explanation:

This tab contains the list of all business roles currently assigned to your user and is the correct place to add the all-employee role.

Step 6: Click Add

In the Assigned Business Roles section:

Click Add

This opens the popup:

Add Business Roles

Explanation:

This popup allows you to search for and assign the custom all-employee role.

Step 7: Search for the custom all-employee role

In the Add Business Roles popup:

In the business role search field, enter:

Z_EMPLOYEES_ALL_#####

Click Go

Select the role:

Z_EMPLOYEES_ALL_#####

All Employee Role #####

Example

If your suffix is 000013, search for:

Z_EMPLOYEES_ALL_000013

Explanation:

This is the custom role created in the earlier launchpad/employee-role tasks.

It contains the launchpad space, catalogs, and page content that must now become visible to your user.

Step 8: Add the role

After selecting the role:

Click OK or Apply

Explanation:

This adds the role to your user in draft mode.

Step 9: Save the business user

Back on the business user page:

Click Save

Explanation:

This is a mandatory step.

Without saving, the role assignment is not finalized, and the new launchpad content will not appear for your user.

Step 10: Confirm the role assignment

After saving, verify that your assigned roles list includes:

Z_EMPLOYEES_ALL_#####

All Employee Role #####

Explanation:

This confirms that the role is now officially assigned to your user.

Step 11: Refresh the browser

After saving:

Refresh the browser completely

Explanation:

SAP launchpad content is often cached in the current session.

A browser refresh ensures the newly assigned role content is loaded.

Step 12: Navigate back to Home

After refreshing:

Return to Home

Explanation:

The role's launchpad space and page must be verified from the end-user homepage, not only from configuration apps.

Step 13: Open the page / launchpad tab

On the homepage, look for the custom page/tab that contains the employee content.

In your run, the visible page was:

General

Explanation:

The launchpad page created earlier was titled General, so that is the page you should open to verify the result.

Step 14: Verify the section title

On the page, confirm that you can see the section:

Self-Services

Explanation:

This was the section title created in the earlier page-content maintenance task.

Step 15: Verify the tiles

Under the Self-Services section, confirm that both tiles are visible:

Concur Travel Expense

Manage My Timesheet

Explanation:

These are the two required employee self-service tiles added to the page in the previous task.

Seeing both of them confirms that:

the catalogs were assigned correctly,

the launchpad page was maintained correctly,

the business role was assigned correctly,

and the browser refresh loaded the new content successfully.

Expected Result

After completing this task successfully:

your own user has the custom business role assigned,

the role is saved successfully,

after browser refresh the launchpad updates,

the homepage shows the new launchpad page,
the Self-Services section is visible,
and the tiles Concur Travel Expense and Manage My Timesheet are visible.

NEW QUESTION # 16

SIMULATION

Create a Custom Launchpad Space and Page

Business Scenario

You are building a custom business role that will be assigned to all employees in the organization. The business role and its corresponding Launchpad Space and Page need to include the apps that have been granted through the business catalogs assigned to the business role to ensure employees have an easy time finding the relevant applications.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Create a Launchpad Space and Page with the information below.

Parameter	Value
Space ID	Z_ALL_EMP_#####
Space Title	General
Space Description	General
Page ID	Z_ALL_EMP_#####
Parameter	Value
Page Title	General
Page Description	General

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a custom launchpad space and page for the all-employee business role so employees can easily

find the apps granted through the assigned business catalogs.

This task belongs to the all-employee role created in the previous tasks, for example:

Business Role ID: Z_EMPLOYEES_ALL_#####

The page values shown in the task are:

Page Title: General

Page Description: General

Business Scenario Explanation

In SAP S/4HANA Cloud, business catalogs grant the app authorizations, but users still need a clean launchpad structure so they can actually find those apps easily.

That is why this task requires creating:

a Launchpad Space

a Launchpad Page

for the all-employee role.

The space acts like a container in the launchpad navigation, and the page acts like the content area where app tiles will later be displayed.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact text values shown in the task.

The task image explicitly shows:

Page Title = General

Page Description = General

Save each object after creation.

Required Values

From the task image, use:

Parameter

Value

Page Title

General

Page Description

General

Additional execution values used in your run

During your actual execution, the custom launchpad space/page used this pattern:

Space ID: Z_ALL_EMP_#####

Space Description: General

Space Title: General

Page ID: Z_ALL_EMP_#####

Page Title: General

Page Description: General

Objective

The purpose of this task is to create a custom launchpad space and page for the all-employee business role so employees can easily find the apps granted through the assigned business catalogs.

This task belongs to the all-employee role created in the previous tasks, for example:

Business Role ID: Z_EMPLOYEES_ALL_#####

The page values shown in the task are:

Page Title: General

Page Description: General

Business Scenario Explanation

In SAP S/4HANA Cloud, business catalogs grant the app authorizations, but users still need a clean launchpad structure so they can actually find those apps easily.

That is why this task requires creating:

a Launchpad Space

a Launchpad Page

for the all-employee role.

The space acts like a container in the launchpad navigation, and the page acts like the content area where app tiles will later be displayed.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact text values shown in the task.

The task image explicitly shows:

Page Title = General

Page Description = General

Save each object after creation.

Required Values

From the task image, use:

Parameter

Value

Page Title

General

Page Description

General

Additional execution values used in your run

During your actual execution, the custom launchpad space/page used this pattern:

Space ID: Z_ALL_EMP_#####

Space Description: General

Space Title: General

Page ID: Z_ALL_EMP_#####

Page Title: General

Page Description: General

Add Launchpad Space

Space ID: *

Z_ALL_EMP_000457

Space Description: *

General

Space Title: *

General

☒ Create Page from Business Catalogs and Groups

☐ Enter page details manually

Create and Assign Space

Cancel

The screenshot displays the SAP S/4HANA Cloud interface for configuring a self-service page. The top navigation bar includes the SAP logo, 'S/4HANA Cloud', and 'Space Details'. The main header shows 'Z_ALL_EMP_000013' with 'General' as the selected tab. Below this, a table lists the page details:

Page ID	Merge ID	Title / Description	Visibility
Z_ALL_EMP_000013	Z_ALL_EMP_000013	General	Visible

The 'Page Content' tab is active, showing a section titled 'Self-Services'. A message indicates: 'To start, drag/add content from catalogs here.' Below this is an 'Add Section' button. On the right, a list of available services is shown under 'Derived from Roles' and 'Manually Selected':

- ☐ Concur Travel Expense (Add | v)
- ☐ Enhanced WBS Element Search (Add | v)
- ☐ Manage My Timesheet (Add | v)

The bottom section of the interface shows the 'Self-Services' area with two tiles: 'Concur Travel Expense' (with an airplane icon) and 'Manage My Timesheet' (with a clock icon and 'Hours Missing' text). The 'General' tab is selected in the top navigation bar.
