Brain Dump Mule-Dev-201 Free & Salesforce Exam Mule-Dev-201 Cost: Salesforce Certified MuleSoft Developer Pass Success

Many candidates like APP test engine of Mule-Dev-201 exam braindumps because it seem very powerful. If you are interested in this version, you can purchase it. This version provides only the questions and answers of Mule-Dev-201 exam braindumps but also some functions easy to practice and master. It can be used on any electronic products if only it can open the browser such as Mobile Phone, Ipad and others. If you always have some fear for the real test or can't control the time to finish your test, APP test engine of Salesforce Mule-Dev-201 Exam Braindumps can set timed test and simulate the real test scene for your practice.

Salesforce Certified MuleSoft Developer Sample Questions (Q91-Q96):

NEW QUESTION # 91

Following Mulesoft's recommended API-led connectivity approach, an organization has created an application network. The organization now needs to create API's to transform, orchestrate and aggregate the data provided by the other API's in the application network. This API should be flexible enough to handle the data from additional API's in future. According to Mulesoft's recommended API-led connectivity approach, what is the best layer for this new API?

- A. Data layer
- B. System layer
- C. Experience layer
- **D. Process layer**

Answer: D

Explanation:

Correct answer is process layer as all the orchestration and transformation logic should be in process layer as per Mulesoft's recommended approach for API led connectivity.

API-led connectivity is a methodical way to connect data to applications through reusable and purposeful APIs. These APIs are developed to play a specific role - unlocking data from systems, composing data into processes, or delivering an experience.

What are the APIs that enable API-led connectivity?

API-led connectivity provides an approach for connecting and exposing assets. With this approach, rather than connecting things point-to-point, every asset becomes a managed API - a modern API, which makes it discoverable through self-service without losing control.

The APIs used in an API-led approach to connectivity fall into three categories:

System APIs - these usually access the core systems of record and provide a means of insulating the user from the complexity or any changes to the underlying systems. Once built, many users, can access data without any need to learn the underlying systems and can reuse these APIs in multiple projects.

Process APIs - These APIs interact with and shape data within a single system or across systems (breaking down data silos) and are created here without a dependence on the source systems from which that data originates, as well as the target channels through which that data is delivered.

Experience APIs - Experience APIs are the means by which data can be reconfigured so that it is most easily consumed by its intended audience, all from a common data source, rather than setting up separate point-to-point integrations for each channel. An Experience API is usually created with API-first design principles where the API is designed for the specific user experience in mind.

NEW QUESTION # 92

What is the output of Dataweave Map operator?

- A. Map
- B. Object
- **C. Array**
- D. String

Answer: C

Explanation:

Returns an array that is the result of applying a transformation function (lambda) to each of the elements.

MuleSoft Doc Ref: <https://docs.mulesoft.com/mule-runtime/4.3/dataweave-cookbook-map> The map operator is a function in Dataweave which iterates over the items in an array and outputs them into a new array. It basically accepts input as a list of items in an array and manipulates the items in the array in order to form a new array as an output.

I have created below chart for your easier understanding:

Table Description automatically generated

Important Operators

Operator	Can be applied on input which is/are	Output type	Used for
map	On Arrays only	Array	Array of Object
mapObject	On Objects only	Object	Output is an Object
reduce	On Arrays	Anything	To reduce into given expression
pluck	On Objects	Array	Same as mapObject, only difference is the output is returned as array instead of Object
flatten	On arrays	Single set of Array	Turns into set of subarrays to single array

NEW QUESTION # 93

How many Mule applications can run on a CloudHub worker?

- A. Depends
- B. At least one
- C. At most one
- D. None of these

Answer: C

NEW QUESTION # 94

What path setting is required for an HTTP Listener endpoint to route all requests to an APIkit router?

- A. "/*"
- B. /()
- C. /(*)
- D. /

Answer: A

Explanation:

Option 1 is correct syntax to configure HTTP Listener endpoint

NEW QUESTION # 95

ARAML specification is defined to manage customers with a unique identifier for each customer record.

What URI does MuleSoft recommend to uniquely access the customer identified with the unique ID 1234?

- A. /customers/1234
- B. /customers/custid=1234
- C. /customers?operation=get&custid=1234
- D. /customers?custid=true&custid=1234

Answer: A

Explanation:

URI parameter (Path Param) is basically used to identify a specific resource or resources. For eg: the URL to get employee details on the basis of employeeID will be GET/employees/{employeeID} where employees is resource and {employeeID} is URI parameter. Hence option 1 is the correct answer

NEW QUESTION # 96
