IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q153-Q158):

NEW QUESTION # 153

Which of the following suggests the greatest degree of transparency?

- A. A privacy notice accommodates broadly defined future collections for new products.
- B. A privacy disclosure statement clearly articulates general purposes for collection
- C. The data subject has multiple opportunities to opt-out after collection has occurred.
- **D. After reading the privacy notice, a data subject confidently infers how her information will be used.**

Answer: D

NEW QUESTION # 154

Combining multiple pieces of information about an individual to produce a whole that is greater than the sum of its parts is called?

- A. Aggregation.
- B. Identification.
- C. Exclusion.
- D. Insecurity.

Answer: A

Explanation:

combining multiple pieces of information about an individual to produce a whole that is greater than the sum of its parts is called aggregation. Aggregation can be used to create more detailed profiles of individuals by combining data from multiple sources.

NEW QUESTION # 155

A developer is designing a new system that allows an organization's helpdesk to remotely connect into the device of the individual to provide support. Which of the following will be a privacy technologist's primary concern'?

- A. Geo-tracking
- B. Geo-tagging
- C. Geofencing
- D. Geolocation

Answer: D

Explanation:

a privacy technologist's primary concern when designing a new system that allows an organization's helpdesk to remotely connect into the device of the individual to provide support would be geolocation.

NEW QUESTION # 156

What has been identified as a significant privacy concern with chatbots?

- A. Chatbot technology providers may be able to read chatbot conversations with users.
- B. Users' conversations with chatbots are not encrypted in transit.
- C. Chatbots can easily verify the identity of the contact.
- D. Most chatbot providers do not agree to code audits

Answer: A

Explanation:

A significant privacy concern with chatbots is related to the data they handle and how it is processed:

* Option A: While code audits are important, this is not the most significant privacy concern for users.

* Option B: Chatbots typically do not have robust identity verification mechanisms, but this is not the primary privacy issue.

* Option C: Encryption in transit is crucial, but many modern chatbots do encrypt data during transmission.

* Option D: Chatbot technology providers may be able to read chatbot conversations with users.

* This is the most significant privacy concern because it involves the potential access and misuse of personal data by the service providers. The conversations can include sensitive information that users may not expect to be accessible to third parties.

NEW QUESTION # 157

A jurisdiction requiring an organization to place a link on the website that allows a consumer to opt-out of sharing is an example of what type of requirement?

- A. Functional
- B. Use case
- C. Technical
- D. Operational

Answer: D
