**問題 #178**
You build an Azure Data Factory pipeline to move data from an Azure Data Lake Storage Gen2 container to a database in an Azure Synapse Analytics dedicated SQL pool.
Data in the container is stored in the following folder structure.
/in/{YYYY}/{MM}/{DD}/{HH}/{mm}
The earliest folder is /in/2021/01/01/00/00. The latest folder is /in/2021/01/15/01/45.
You need to configure a pipeline trigger to meet the following requirements:

Existing data must be loaded.

Data must be loaded every 30 minutes.

Late-arriving data of up to two minutes must he included in the load for the time at which the data should have arrived.

How should you configure the pipeline trigger? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**答案：**

**解題說明：**

Explanation:

Box 1: Tumbling window

To be able to use the Delay parameter we select Tumbling window.

Box 2:

Recurrence: 30 minutes, not 32 minutes

Delay: 2 minutes.

The amount of time to delay the start of data processing for the window. The pipeline run is started after the expected execution time plus the amount of delay. The delay defines how long the trigger waits past the due time before triggering a new run. The delay doesn't alter the window startTime.

**問題 #179**

You have an Azure data factory.

You need to examine the pipeline failures from the last 180 flays.

What should you use?

- A. Azure Data Factory activity runs in Azure Monitor
- B. the Resource health blade for the Data Factory resource
- C. Pipeline runs in the Azure Data Factory user experience
- D. the Activity tog blade for the Data Factory resource

**答案：A**

**解題說明：**

Data Factory stores pipeline-run data for only 45 days. Use Azure Monitor if you want to keep that data for a longer time.

**問題 #180**

You plan to monitor an Azure data factory by using the Monitor & Manage app.

You need to identify the status and duration of activities that reference a table in a source database.

Which three actions should you perform in sequence? To answer, move the actions from the list of actions to the answer are and arrange them in the correct order.

**答案：**

**解題說明：**

1 - From the Data Factory authoring UI, generate a user property for Source on all activities.

2 - From the Data Factory monitoring app, add the Source user property to Activity Runs table.

3 - From the Data Factory authoring UI, publish the pipelines

**問題 #181**

You have an Azure subscription. The subscription contains an Azure SQL database named DB1 and an Azure Synapse Analytics workspace that has a PySpark notebook. The notebook contains a cell that includes the following magic.

%%sql
You need to add SQL code to the cell that connects to DB1.
Which SQL dialect should you use for the code that will run after the magic?

- A. PySQL
- B. PL/SQL
- C. T-SQL
- D. Apache Spark SQL

答案：C

問題 #182

You have an Azure Data Factory instance named ADF1 and two Azure Synapse Analytics workspaces named WS1 and WS2. ADF1 contains the following pipelines:

P1: Uses a copy activity to copy data from a nonpartitioned table in a dedicated SQL pool of WS1 to an Azure Data Lake Storage Gen2 account P2: Uses a copy activity to copy data from text-delimited files in an Azure Data Lake Storage Gen2 account to a nonpartitioned table in a dedicated SQL pool of WS2 You need to configure P1 and P2 to maximize parallelism and performance. Which dataset settings should you configure for the copy activity if each pipeline? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

答案：

解題說明：

Explanation

Box 1: Set the Copy method to PolyBase
While SQL pool supports many loading methods including non-Polybase options such as BCP and SQL BulkCopy API, the fastest and most scalable way to load data is through PolyBase. PolyBase is a technology that accesses external data stored in Azure Blob storage or Azure Data Lake Store via the T-SQL language.
Box 2: Set the Copy method to Bulk insert
Polybase not possible for text files. Have to use Bulk insert.
