Test UiPath-ADPv1 Practice | 100% Free Latest New UiPath (ADPv1) Automation Developer Professional Exam Papers
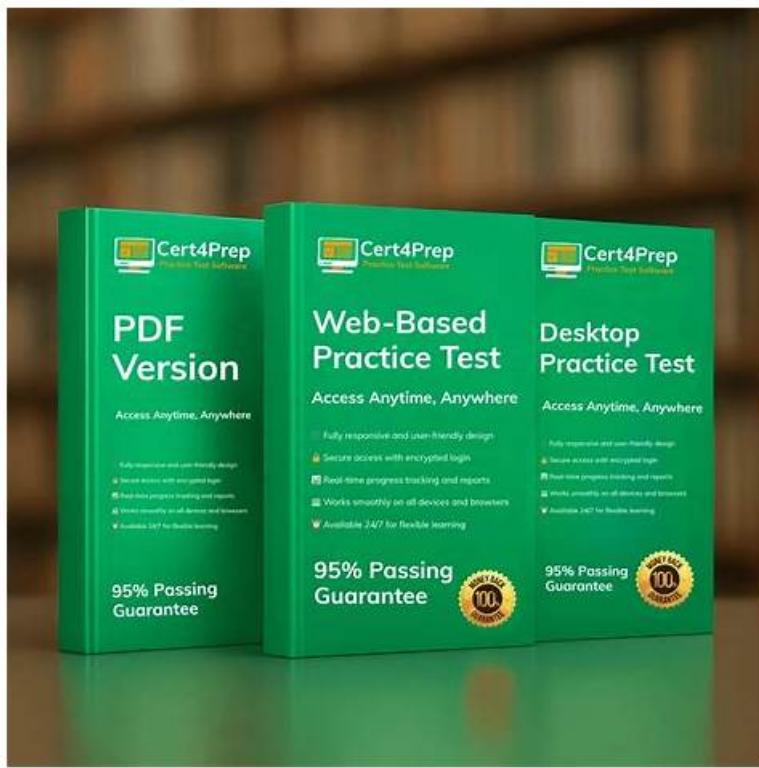

BTW, DOWNLOAD part of Lead1Pass UiPath-ADPv1 dumps from Cloud Storage: https://drive.google.com/open?id=1-bz6eqUnBHceNTLGQ9XyPT_se6dzIRPP

We put high emphasis on the protection of our customers' personal data and fight against criminal actson our UiPath-ADPv1 exam questions. Our UiPath-ADPv1 preparation exam is consisted of a team of professional experts and technical staff, which means that you can trust our security system with whole-heart. As for your concern about the network virus invasion, UiPath-ADPv1 Learning Materials guarantee that our purchasing channel is absolutely worthy of your trust.

UiPath UiPath-ADPv1 Exam Syllabus Topics:

Topic	Details
Topic 1	• Design and Development: This section covers designing workflows using sequences, flowcharts, and state machines, building reusable components with libraries, exception handling and debugging techniques, etc.
Topic 2	• UiPath Activities: In this section, the discussion is related to various UiPath activities for UI interaction, data manipulation, control flow, and more.
Topic 3	• UiPath Studio Fundamentals: In this section, the focus is given to the understanding of Robotic Process Automation (RPA) concepts; it covers UiPath Studio and its components, Working with the UiPath user interface, project creation, management, and version control.
Topic 4	• Debugging and Testing: This section is about utilizing logging and debugging tools and adopting unit testing and test automation strategies.

100% Pass Quiz 2026 UiPath UiPath-ADPv1: The Best Test UiPath (ADPv1) Automation Developer Professional Practice

Free update for 365 days for UiPath-ADPv1 study guide materials is available. That is to say, in the following year, you can get the latest information of the exam for free. Besides, our system will send the latest version of UiPath-ADPv1 exam dumps to your email automatically. And you just need to receive them and carry on your practice. With the experienced experts to compile UiPath-ADPv1 Study Guide materials, the quality can be guaranteed. And if you choose us, we will help you pass the exam successfully, and obtaining a certificate isn't a dream.

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q141-Q146):

NEW QUESTION # 141
What is the purpose of the Invoke Code activity in UiPath?

- A. Invokes Java code, optionally passing it a list of input arguments.
- B. Invokes VB MET code optionally passing it a list of input arguments
- C. Invokes VB MET or Java code optionally passing it a list of input arguments
- D. Invokes VB.NET or C# code, optionally passing il a list of input arguments.

Answer: D

Explanation:
The purpose of the Invoke Code activity in UiPath is to invoke VB.NET or C# code, optionally passing it a list of input arguments. The Invoke Code activity allows the developer to write and execute custom code in VB.NET or C# within a UiPath workflow. The Invoke Code activity has a Code property, where the developer can enter the code to be executed. The Invoke Code activity also has an Arguments property, where the developer can specify the input and output arguments for the code. The Invoke Code activity can be useful for performing complex calculations, manipulating data, or integrating with external libraries or applications that are not supported by the existing UiPath activities. References: [Invoke Code]

NEW QUESTION # 142
Data from an Excel file is read into a data table named "dtEmployee", as displayed in the following graphic:

	A	B	C	D
1	Name	Date Of Joining	Department	Salary
2	Andrew	12/11/2016	IT	30000
3	Billy	11/11/2015	IT	20000
4	Clara	6/6/2013	Marketing	15000
5	Dennis	8/12/2017	ITES	35000
6	Esther	2/11/2017	Finance	42000
7	Fatima	6/6/2013	ITES	30000
8	Gilly	8/6/2013	Finance	15000
9	Hannah	2/11/2017	Finance	28000
10				
11				
12				

Emp Data

A developer needs to filter the data table to obtain all rows representing employees from the Finance and IT departments with a Salary under 30,000. Which expression yields the desired outcomes?

- A. dtEmployee.Select("([Department]='IT' AND [Department]='Finance') AND [Salary] < 30000")
- B. dtEmployee.Select("[Department]='IT OR [Department]='Finance' OR [Salary] < 30000")
- C. dtEmployee.Select("([Department]='IT OR [Department]='Finance') AND [Salary] < 30000")
- D. dtEmployee.Select("[Department]='IT OR [Department]= 'Finance' AND [Salary] < 30000")

Answer: C

NEW QUESTION # 143

Which activity can be used to transition a Background Process to Foreground?

- **A. Use Foreground**
- B. Set Focus
- C. Maximize Window
- D. Activate

Answer: A

Explanation:
A background process is a type of automation that can run in parallel with one foreground process on the same robot, without requiring user interaction. A foreground process is a type of automation that requires user interaction and runs on the visible desktop. A background process can transition to foreground by using the Use Foreground activity, which moves the current background process into the foreground, executing all the activities it contains. After the execution is complete, the process is moved back into the background.
The other options are not activities that can be used to transition a background process to foreground. Option B, Activate, is an activity that activates a specified UI element by bringing it to the foreground. Option C, Maximize Window, is an activity that maximizes a specified window. Option D, Set Focus, is an activity that sets the keyboard focus to a specified UI element.
References: Activities - Use Foreground - UiPath Documentation Portal, Studio - Background Process - UiPath Documentation Portal, Background Process Automation - UiPath Documentation Portal

NEW QUESTION # 144

Assume we have the Verify Expression with Operator activity from the UiPath. Testing.Activities package with the properties configured as follows:
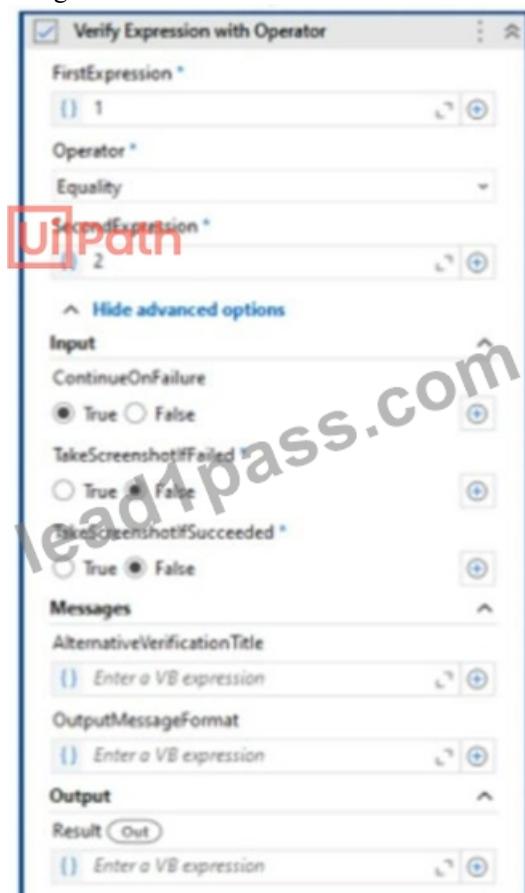

The activity is used within a Try-Catch activity. The Catch block is set to System.Exception and UiPath.
Testing.Exception.TestingActivitiesException as shown in the screenshot below:
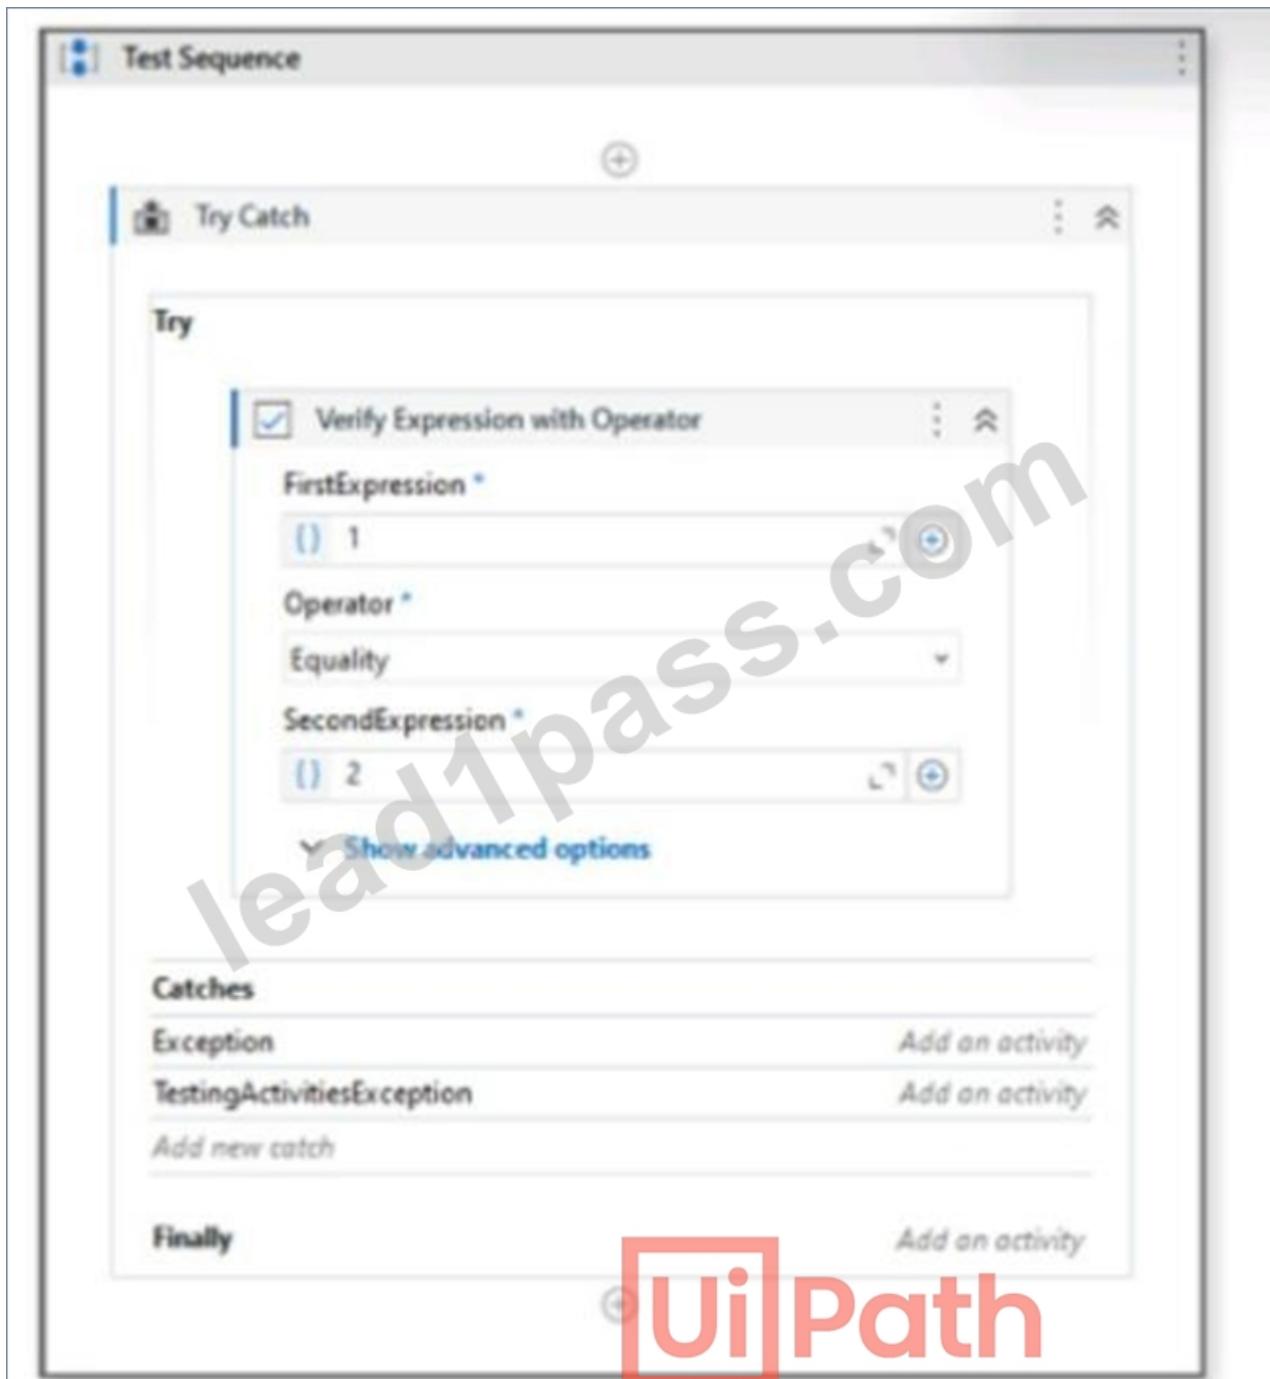

During the execution of the sequence shown above, which block from the Try-Catch activity will be entered first, after the Verify Expression with Operator activity is executed?

- A. The Exception sequence from the Catches block within the Try-Catch activity.
- B. The Finally block within the Try-Catch activity.
- C. None of the other blocks within the Try-Catch activity will be executed.
- D. The TestingActivitiesException sequence from the Catches block within the Try-Catch activity.

Answer: A

Explanation:
The Verify Expression with Operator activity is used to verify an expression by asserting it in relation to a given expression with an operator1. The expressions tested with this activity must be inserted in their respective property fields. In this case, the activity is configured to verify if the expression "1" is equal to the expression "2". The result of this verification is stored in the Result property, which reflects the state of the verification activity1. If the verification fails, the activity throws a TestingActivitiesException, which is a custom exception type defined by the UiPath.Testing.Activities package2.

The Try-Catch activity is used to catch a specified exception type in a sequence or activity, and either displays an error notification or dismisses it and continues the execution3. The activity has three main sections: Try, Catches, and Finally. The Try section holds

the activity or set of activities that could throw an exception. The Catches section indicates the exception type and holds the activity or set of activities to be performed when the specified exception is thrown. The Finally section holds the activity or set of activities to be performed after the Try and Catches blocks are executed, regardless of the result3.

In this scenario, the Verify Expression with Operator activity is placed in the Try section of the Try-Catch activity. The Catches section has two exceptions caught: System.Exception and TestingActivitiesException.

The Finally section is empty. During the execution of the sequence, the Verify Expression with Operator activity will throw a TestingActivitiesException, because the expressions 1 and 2 are not equal. The Try- Catch activity will catch this exception and enter the TestingActivitiesException sequence from the Catches section, where the appropriate actions can be performed to handle the error. Therefore, the correct answer is C: The Exception sequence from the Catches block within the Try-Catch activity will be entered first, after the Verify Expression with Operator activity is executed.

The other options are incorrect because:

* Option A is incorrect because the Try-Catch activity will execute one of the blocks within the Catches section, depending on the type of exception thrown by the Verify Expression with Operator activity. In this case, the TestingActivitiesException sequence will be executed.

* Option B is incorrect because the Finally block within the Try-Catch activity will be executed only after the Try and Catches blocks are executed, not before. The Finally block is used to perform any cleanup or final actions that are needed regardless of the outcome of the Try and Catches blocks3.

* Option D is incorrect because the TestingActivitiesException sequence from the Catches block within the Try-Catch activity will be entered second, not first, after the Verify Expression with Operator activity is executed. The first block to be entered is the Try block, where the Verify Expression with Operator activity is placed.

NEW QUESTION # 145

What is the purpose of the Capture All Elements feature in Object Repository?

- A. To capture the selected elements of an application using the Computer Vision technology.
- B. To capture all elements of an application from multiple screens simultaneously using the Computer Vision technology.
- C. To capture the selected elements of an application from multiple screens simultaneously using the Computer Vision technology.
- D. To capture all the available elements of an application using the Computer Vision technology.

Answer: D

Explanation:
The Object Repository is a feature of UiPath Studio that allows you to store and manage UI elements that are used in your automation projects. You can create and edit UI descriptors for the UI elements, and reuse them across multiple workflows and projects. The Object Repository supports both the default UI framework and the Computer Vision framework for identifying UI elements.

The Computer Vision framework is a technology that uses artificial intelligence and machine learning to analyze the UI of any application and provide reliable selectors for the UI elements. The Computer Vision framework can handle complex and dynamic UIs that are not supported by the default UI framework, such as Citrix, SAP, or PDF applications.

The Capture All Elements feature in Object Repository is a feature that allows you to capture all the available elements of an application using the Computer Vision technology. You can use this feature to quickly and easily create UI descriptors for all the UI elements on the screen, without having to indicate each element individually. You can access this feature by clicking the Capture All Elements button on the Object Repository ribbon tab, or by using the Capture All Elements activity in the workflow.

The Capture All Elements feature has the following benefits:

It saves time and effort by capturing all the UI elements in one go, instead of indicating each element separately.

It ensures consistency and accuracy by using the same Computer Vision technology and selector logic for all the UI elements.

It allows you to edit, rename, or delete the UI descriptors after capturing them, and customize them according to your needs.

It enables you to reuse the UI descriptors across multiple workflows and projects, and share them with other developers.

The correct answer is C. To capture all the available elements of an application using the Computer Vision technology. This statement accurately describes the purpose of the Capture All Elements feature in Object Repository.

The other options are not correct statements. Option A is incorrect, because the Capture All Elements feature does not capture the selected elements of an application, but all the available elements. It also does not capture the elements from multiple screens simultaneously, but only from the current screen. Option B is incorrect, because the Capture All Elements feature does not capture the selected elements of an application, but all the available elements. Option D is incorrect, because the Capture All Elements feature does not capture the elements from multiple screens simultaneously, but only from the current screen.

NEW QUESTION # 146

......

As the saying goes, knowledge has no limits. You may be old but the spirit of endless learning won't be old. If you attend the test of UiPath-ADPv1 certification you will update your stocks of knowledge and improve your actual abilities, buying our UiPath-ADPv1 Study Materials can help you pass the test smoothly. You will acquire a lot of knowledge to make you more learned and enhance your working abilities in some certain area.
