Answer: D

Explanation:

Successful exit criteria for User Acceptance Testing (UAT) is:

✓ Customer Acceptance Sign-off This means:

All test cases have passed

All critical defects are resolved

Stakeholders approve the solution

The project is cleared to move into deployment

This is documented in Salesforce Implementation Lifecycle.

Why other choices are incorrect: Option

Why Wrong

A - Change Order

Change orders happen when new scope is introduced, not an exit criterion for UAT.

C - Design Document

Completed earlier during design phase.

- A. Recommend to enable the CPQ Package Setting for "Large Quote Threshold" to an appropriate value in order to prevent future performance issues.
- B. Recommend continued use of multiple automation types where Revenue Cloud capabilities cannot address the business requirements
- **C. Recommend using a single automation type for best Performance.**
- D. Recommend the current automations are appropriate, optimize further if necessary.

Answer: C

Multiple triggers

Workflows

Flows

Possibly recursion or conflicting automations... on the Opportunity, which is foundational for CPQ.

Salesforce Revenue Cloud Best Practice: Use one automation type (preferably Flow) to avoid conflicts, recursion, performance issues, and unpredictable ordering.

Too many automation types cause issues with:

CPQ Quote Sync

Opportunity → Quote event handling

Performance and CPU limits

Unpredictable execution order

Therefore:

✓ A - Recommend using a single automation type for best performance This aligns with:

Salesforce Well-Architected Framework

Salesforce CPQ implementation guidelines

General platform automation best practices

Why other options are incorrect: Option

Why Not Correct

B

Large Quote Threshold affects calculator performance, not Opportunity automation.

C

Multiple automation types is the problem, not the solution.

D

Accepting the current messy automation is not recommended before CPQ implementation.

Thus A is correct.
