It results in 1z0-1054-25 exam failure and loss of time and money. To pass the Oracle 1z0-1054-25 exam in a short time, you must prepare with updated Oracle 1z0-1054-25 practice questions. However, the Pass4SureQuiz is one of the best and most dependable. This platform offers updated and Real 1z0-1054-25 Exam Questions that help applicants ace the 1z0-1054-25 test for the first time.

Oracle 1z0-1054-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Processing Intercompany: This domain assesses the skills of Finance Integration Specialists in configuring and managing intercompany transactions. Candidates must understand balancing rules, clearing configurations, and transaction processing, as well as how to maintain intercompany reconciliations in multi-entity structures.
Topic 2	<ul style="list-style-type: none"> Implementing Enterprise and Financial Reporting Structures: This section of the exam measures skills of Oracle ERP Implementation Consultants and covers the core components used in setting up enterprise structures and reporting configurations. It assesses knowledge in defining legal entities, jurisdictions, and geographies, as well as the design and configuration of Chart of Accounts. Candidates must also demonstrate how to set up and secure chart structures and manage reporting calendars and currencies.
Topic 3	<ul style="list-style-type: none"> Configuring Financial Reports: This portion of the exam measures the abilities of Financial Reporting Analysts and includes creating and managing a range of reports using tools like the Financial Reporting Center, Web Studio, OTBI, Smart View, and Dashboards. Candidates must know how to define account groups, set up infolets, and build custom analytics tailored to user needs.

Topic 4	<ul style="list-style-type: none"> • Implementing Ledgers: This part evaluates the competencies of Financial Systems Analysts and focuses on defining and configuring ledgers within Oracle Financials. Candidates are expected to manage ledger-level security and understand how to utilize General Ledger Balances Cubes for better financial visibility and reporting accuracy.
Topic 5	<ul style="list-style-type: none"> • Performing Period Close: Designed for Oracle Financial Application Managers, this section evaluates expertise in executing and managing the period close lifecycle. Topics include reconciliations, revaluation, translation, and consolidation. Candidates are required to configure the Period Close Monitor and associated setups like revaluation, allocations, and chart mappings for financial consolidation.

Free PDF Quiz 1z0-1054-25 - Oracle Financials Cloud: General Ledger 2025 Implementation Professional Accurate Valid Test Notes

It is human nature to pursue wealth and success. No one wants to be a common person. In order to become a successful person, you must sharpen your horizons and deepen your thoughts. Our 1z0-1054-25 practice guide can help you update yourself in the shortest time. And according to the data of our loyal customers, we can claim that if you study with our 1z0-1054-25 Exam Questions for 20 to 30 hours, then you can pass the exam with ease. And the price of our 1z0-1054-25 study materials is quite favourable.

Oracle Financials Cloud: General Ledger 2025 Implementation Professional Sample Questions (Q21-Q26):

NEW QUESTION # 21

You have redesigned your chart of accounts and need to update your existing cross-validation rules. There is a requirement for new rules; some simply need to be updated and others need to be deleted.

What is the most efficient way to achieve this?

- A. by using the Manage Cross-Validation Rules page.
- B. by creating Cross-Validation Rules desktop-integrated spreadsheet.
- **C. by using Cross-Validation Rules Import file-based data import (FBDI).**
- D. by using the Manage General Ledger Security page.

Answer: C

Explanation:

According to Oracle documentation¹, the most efficient way to update your existing cross-validation rules when you have redesigned your chart of accounts is to use Cross-Validation Rules Import file-based data import (FBDI). FBDI enables you to import cross-validation rules from a spreadsheet template into General Ledger. You can use FBDI to create new rules, update existing rules, or delete rules. Therefore, option C is correct. Option A is incorrect because using the Manage General Ledger Security page does not enable you to update cross-validation rules. Option B is incorrect because creating Cross-Validation Rules desktop-integrated spreadsheet does not enable you to update cross-validation rules. Option D is incorrect because using the Manage Cross-Validation Rules page does not enable you to update cross-validation rules efficiently.

According to Oracle documentation², you should create a Data Access Set that allows access to the UK Ledger to allow users with the General Accountant job role to access the UK Ledger. A Data Access Set is a security feature that defines the ledgers and balancing segment values that a user can access. You can assign Data Access Sets to users or roles using the Manage Data Access for Users page. Therefore, option B is correct. Option A is incorrect because assigning the security context value of UK Ledger to the user/role combination does not enable access to the ledger. Option C is incorrect because assigning the General Accounting Manager role to those users does not enable access to the ledger. Option D is incorrect because assigning the UK reference set to the user/role combination does not enable access to the ledger.

NEW QUESTION # 22

You already ran Translation, but a last-minute adjusting journal entry in your ledger currency was entered and posted after you consolidated your results.

What is Oracle's recommended practice when this occurs?

- A. Rerun Revaluation and then rerun Translation.
- B. Enter another adjusting journal entry in the target currency to true up the balances.
- **C. Rerun Translation and then reconsolidate your results.**
- D. Translate only the adjusting journal entry.

Answer: C

Explanation:

According to Oracle's documentation, if you enter and post additional journal entries in your ledger currency after you run translation, you should rerun translation for the entire ledger or ledger set to ensure that all balances are translated using the same exchange rates. Then, you should reconsolidate your results to reflect the updated translated balances. References:

Using General Ledger, page 9-7: "If you enter and post additional journal entries in your ledger currency after you run translation, you should rerun translation for the entire ledger or ledger set." Using General Ledger, page 9-8: "After you run translation, you can consolidate your results to create a consolidated balance sheet and income statement." Implement General Ledger, page 2-10: "You can translate and consolidate balances as part of the period close process."

NEW QUESTION # 23

You define intercompany balancing rules that are applied to a specific source and category, such as Payables and Invoices, or a specific intercompany transaction type, such as Intercompany Sales.

Which statement on intercompany configuration is true?

- **A. You can create a rule for all sources and categories by selecting the source "Other" and category "Other"**
- B. Intercompany balancing evaluates the rules in the following order: ledger, legal entity, chart of accounts, and primary balancing segment value.
- C. You must define intercompany balancing rules for all sources, categories, and transaction types.

Answer: A

NEW QUESTION # 24

The current implementation project covers Financials (with Fixed Assets and Expenses) with operations planned in three countries (USA, Italy, and India).

Which three labels are required when designing the chart of account structure for this project? (Choose three.)

- A. Intercompany Segment
- B. Secondary Balancing
- **C. Primary Balancing**
- **D. Natural Account**
- **E. Cost center**

Answer: C,D,E

Explanation:

The three labels that are required when designing the chart of account structure for this project are Primary Balancing, Cost center, and Natural Account. A chart of account structure is composed of segments that represent different dimensions of accounting information, such as company, department, account, or project.

Each segment has a label that indicates its function or purpose within the chart of accounts. The Primary Balancing label is required for the segment that identifies the legal entity or business unit for which financial statements are prepared and balanced. The Cost center label is required for the segment that identifies the organizational unit or function that incurs expenses or generates revenues. The Natural Account label is required for the segment that identifies the nature of an account, such as asset, liability, revenue, or expense.

The Intercompany Segment label is not required when designing the chart of account structure for this project, as this is an optional label for the segment that identifies intercompany transactions between different legal entities or business units within the same enterprise. The Secondary Balancing label is not required when designing the chart of account structure for this project, as this is an optional label for the segment that identifies an additional balancing dimension other than the primary balancing segment, such as fund or region. NEW QUESTION # 25

Which three factors should you consider while specifying Intercompany System options?

- A. Whether to enforce an enterprise-wide currency or allow intercompany transactions in local currencies
- B. Automatic or manual batch numbering and the minimum transaction amount
- C. Automatic or manual batch numbering and the maximum transaction amount
- D. Whether to allow receivers to reject intercompany transactions
- E. Approvers who will approve intercompany transactions

Answer: A,B,D

Explanation:

Intercompany System options are used to set up intercompany processing rules at the enterprise level, based on your specific business needs. They help you standardize and simplify transaction processing, minimize disputes, and reduce administrative costs.

The three factors that you should consider while specifying Intercompany System options are:

* Automatic or manual batch numbering and the minimum transaction amount: These options help you control the numbering and the size of intercompany transactions. You can choose to use system generated or manual batch numbering, and you can specify a minimum threshold amount for intercompany transactions to prevent immaterial transactions. To use the minimum transaction amount option, you must also select an Intercompany currency option.

* Whether to enforce an enterprise-wide currency or allow intercompany transactions in local currencies:

This option helps you manage the currency risk and the conversion rate fluctuations for intercompany transactions. You can choose to standardize transaction processing by selecting an Intercompany currency, which means that all intercompany transactions created in the Intercompany module are entered in this currency. Alternatively, you can choose to allow intercompany transactions in local currencies, which means that intercompany transactions can be entered in the ledger currency of the sender or the receiver.

* Whether to allow receivers to reject intercompany transactions: This option helps you handle the approval and dispute resolution process for intercompany transactions. You can choose to allow receivers to reject intercompany transactions if they disagree with the sender's information, such as the amount, the account, or the date. If you enable this option, you must also specify the rejection reason and the notification details for the sender.
