## Clearer NetSec-Pro Explanation - 2026 Palo Alto Networks Palo Alto Networks Network Security Professional Realistic Valid Test Cram Pass Guaranteed

Our NetSec-Pro practice materials are suitable for a variety of levels of users, no matter you are in a kind of cultural level, even if you only have high cultural level, you can find in our NetSec-Pro study materials suitable for their own learning methods. So, for every user of our study materials are a great opportunity, a variety of types to choose from, more and more students also choose our NetSec-Pro Study Materials, then why are you hesitating?

## Palo Alto Networks Network Security Professional Sample Questions (Q27-

## Q32):

### NEW QUESTION # 27

Which two security services are required for configuration of NGFW Security policies to protect against malicious and misconfigured domains? (Choose two.)

- A. Advanced DNS Security
- B. Advanced Threat Prevention
- C. Advanced WildFire
- D. SaaS Security

**Answer: A,B**

Explanation:

Protecting against malicious and misconfigured domains requires two critical services:

Advanced Threat Prevention

Provides signature-based and advanced analysis to identify threats, including DNS-based attacks.

"Advanced Threat Prevention enables the NGFW to detect and prevent exploits and malware-based communications, including those leveraging DNS." (Source: Advanced Threat Prevention) Advanced DNS Security Specifically designed to detect and sinkhole malicious and misconfigured DNS queries.

"DNS Security uses real-time intelligence to block DNS-based threats, protect against data exfiltration, and automatically sinkhole suspicious domain lookups." (Source: DNS Security) By combining these services in security policies, NGFWs ensure robust protection against domain-based threats and misconfigurations.

### NEW QUESTION # 28

How does Advanced WildFire integrate into third-party applications?

- A. Through customized reporting configured in NGFWs
- B. Through playbooks automatically sending WildFire data
- C. Through Strata Logging Service
- D. Through the WildFire API

**Answer: D**

Explanation:

Advanced WildFire supports direct integrations into third-party security tools through the WildFire API, enabling automated threat intelligence sharing and real-time verdict dissemination.

"WildFire exposes a RESTful API that third-party applications can leverage to integrate WildFire's analysis results and threat intelligence seamlessly into their own security workflows." (Source: WildFire API Guide) The API provides:

- \* Verdict retrieval
- \* Sample submission
- \* Report retrieval

"Use the WildFire API to submit samples, retrieve verdicts, and obtain detailed analysis reports for integration with your existing security infrastructure." (Source: WildFire API Use Cases)

### NEW QUESTION # 29

What key capability distinguishes Content-ID technology from conventional network security approaches?

- A. It performs packet header analysis short of deep packet inspection.
- B. It relies primarily on reputation-based filtering.
- C. It exclusively monitors network traffic volumes.
- D. It provides single-pass application layer inspection for real-time threat prevention.

**Answer: D**

Explanation:

Content-ID is the core of Palo Alto Networks' prevention architecture, providing single-pass application layer inspection to deliver real-time threat prevention across all traffic.

"Content-ID uses a single-pass architecture to perform application-layer (Layer 7) traffic inspection and real-time threat prevention.

Unlike traditional firewalls that rely on multiple scans, Content-ID inspects traffic once to enforce multiple security controls simultaneously." (Source: Content-ID Overview) By consolidating security functions in a single pass, it ensures both efficiency and comprehensive security.

#### NEW QUESTION # 30

Which two configurations are required when creating deployment profiles to migrate a perpetual VM-Series firewall to a flexible VM? (Choose two.)

- A. Choose "Fixed vCPU Models" for configuration type.
- B. Deploy virtual Panorama for management.
- C. Allocate the same number of vCPUs as the perpetual VM.
- D. Allow only the same security services as the perpetual VM.

**Answer: C,D**

Explanation:

When migrating from a perpetual VM-Series firewall license to a flexible VM licensing model, two critical steps are needed:

Allocate same number of vCPUs- This ensures that the VM-Series capacity remains consistent and avoids resource bottlenecks.

"When migrating perpetual VM-Series licenses to flexible VM licensing, allocate the same vCPU and memory resources to ensure equivalent performance." (Source: VM-Series Flexible Licensing Migration) Limit to same security services- Flexible licensing requires maintaining the same security services to preserve licensing compliance.

"Ensure that you allow only the same security services on the flexible VM instance as were licensed on the perpetual VM." (Source: Flexible Licensing and Service Subscriptions)

#### NEW QUESTION # 31

A network security engineer wants to forward Strata Logging Service data to tools used by the Security Operations Center (SOC) for further investigation. In which best practice step of Palo Alto Networks Zero Trust does this fit?

- A. Implementation
- B. Report and Maintenance
- C. Map and Verify Transactions
- D. Standards and Designs

**Answer: B**

Explanation:

The "Report and Maintenance" step of the Zero Trust model emphasizes ongoing monitoring, analysis, and reporting to ensure the environment remains secure over time.

"The Report and Maintenance phase includes continuous monitoring, log forwarding, and sharing of security telemetry to third-party tools to maintain and validate Zero Trust implementation." (Source: Zero Trust Best Practices) By forwarding logs to SOC tools, the engineer ensures comprehensive visibility and proactive threat hunting.
