Salesforce Certified Administrator Sample Questions (Q227-Q232):

NEW QUESTION # 227

Northern Trail Outfitters has a new flow that automatically sets the field values when a new account is created. That the flow is launched by a process, But the flow is not working properly.

What should administrator do to identify the problem?

- A. Review debug logs with the login level.
- **B. Use the native debug feature in the flow builder.**
- C. View the setup audit Trail and review for errors.
- D. Setup Email logs and review the send error log.

Answer: B

Explanation:

Explanation

Native debug feature is a tool that can be used to identify the problem with the new flow. Native debug feature allows users to test a flow by running it with different input values and inspecting the output values at each element. Users can also see error messages and warnings that indicate where the flow failed or might fail.

NEW QUESTION # 228

Which setting on a profile makes a tab hidden in the All App Launcher or viable in any app, but still allows a user to view records that would normally be found under this tab?

- A. Tab Settings
- B. Object Permissions
- C. App Permissions
- D. Org-wide Defaults

Answer: A

Explanation:

Explanation

To make a tab hidden in the All App Launcher or visible in any app, but still allow a user to view records that would normally be found under this tab, the administrator should use Tab Settings on a profile. Tab Settings control the visibility and default behavior of tabs for each app in an org. The administrator can set a tab to Hidden, which means it will not appear in any app or in the All App Launcher, but users can still access records via other means such as search or reports. Object Permissions, App Permissions, and Org-Wide Defaults are not related to tab visibility. References:

https://help.salesforce.com/s/articleView?id=sf.customize_tabs.htm&type=5

NEW QUESTION # 229

The administrator for Cloud Kicks needs to give access to a new custom object with custom fields to more than one user.

Which two options should an administrator use to meet this requirement?

Choose 2 answers

- A. Add to manual sharing list
- B. Assign permission set group to Users
- C. Edit organization-wide defaults
- D. Create a Permission Set

Answer: B,D

Explanation:

Explanation

A permission set group is a collection of permission sets that can be assigned to users as one unit; it simplifies permission management by reducing the number of permission assignments needed for users who require multiple permission sets. A permission set is a collection of settings and permissions that give users access to various tools and functions in Salesforce; it can be used to extend users' access beyond their profile without changing their profile. Creating permission sets and assigning permission set groups can help Cloud Kicks give access to new custom object with custom fields to more than one user by creating permission sets that include access to new custom object with custom fields and assigning permission set groups that contain those permission sets to users who need them. Adding users to manual sharing list or editing organization-wide defaults are not options for giving access to new custom object with custom fields to more than one user; they either do not apply to custom objects or do not grant object-level access. NEW QUESTION # 230

Cloud Kicks wants to allow customers to create their own cases while visiting its public homepage.

What should the administrator recommend?

- A. Web-to-Case
- B. Omni-Channel
- C. Email-to-Case

- D. SMS Response

Answer: A

NEW QUESTION # 231

AW Computing would like to improve its Case Lightning record page by including:

* A filtered component to display a message in bold font when a case is saved as a critical record type.

* A quick way to update the account status from the case layout.

Which two components should an administrator use to satisfy these requests?

Choose 2 Answers

- A. Rich text
- B. Record details
- C. Related List
- D. Related Record

Answer: A,D

Explanation:

Explanation

A related record component is a type of component that allows users to view and edit fields from a parent record on a child record page without leaving the page. For example, a related record component can allow users to update the account status from the case layout by selecting an account record from a drop-down list. A rich text component is a type of component that allows users to display formatted text on a record page using rich text editor tools such as bold font, bullet points, images, and links. For example, a rich text component can display a message in bold font when a case is saved as a critical record type by using conditional visibility rules.
