NEW QUESTION # 35

A customer needs to implement an automated Continuous Integration and Continuous Development (CI/CD) workflow where developers will work on their own Developer orgs to configure different OmniScripts. The developers then need to migrate the changes they have done to a sandbox that will be used for testing before promoting changes to Production.

Which tool should developers use to automate the migration of OmniStudio DataPacks and Salesforce metadata within the Media Cloud orgs?

- A. Data Loader
- B. IDX Workbench
- C. Backup and Restore Automation
- D. IDX Build Tool

Answer: D

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
IDX Build Tool is the recommended tool for automating migration and deployment of OmniStudio DataPacks and metadata between Salesforce orgs, supporting CI/CD workflows. IDX Workbench is more manual, and Backup and Restore Automation and Data Loader do not support OmniStudio DataPacks.

A Sales Executive creates a quote. When the quote status is changed to Client Approved, it should automatically be submitted for approval. The approver needs to be a queue instead of an individual Salesforce user.

How can this be achieved in the system?

- A. Invoke Approval Process created on Opportunity linked to the Quote and keep Queue as Approver.
- B. Invoke Approval Process on Quote and keep Queue as Approver.
- C. Invoke Approval Process created on individual QuoteLineItem and keep Queue as Approver.
- D. Invoke Approval Process created on a custom object having lookup to Quote and keep Queue as Approver.

Answer: B
