## Salesforce Certified MuleSoft Developer Sample Questions (Q129-Q134):

### NEW QUESTION # 129

According to Semantic Versioning, which version would you change for incompatible API changes?

- A. No change
- B. PATCH
- C. MAJOR
- D. MINOR

**Answer: C**

Explanation:

Correct answer is MAJOR

MAJOR version when you make incompatible API changes, MINOR version when you add functionality in a backwards compatible manner, and PATCH version when you make backwards compatible bug fixes.

For details refer to this documentation : <https://semver.org/>

### NEW QUESTION # 130

Refer to the exhibit.

What DataWeave expression transforms the conductorIds array to the XML output?

- A. ☐
- B. ☐
- C. ☐
- D. ☐

**Answer: A**

### NEW QUESTION # 131

Refer to the exhibit.

The default scope in choice router recursively calls the color flow.

A web client sends a PUT request to the HTTP listener with payload Blue.

What response is returned to the web client?

- A. ["Blue", "Red", "Blk"]
- B. "Green"
- C. A timeout error
- D. "Blk"

**Answer: C**

Explanation:

Sequence can be described as follows.

\* When web client sends the request, it sends payload as Blue (mentioned in question)

\* In first iteration this will go to default choice, which sets payload to Red

\* Via default route, flow will call itself with payload as Red

\* In second iteration, as payload is Red, it will go to first route in choice router which will set payload to Blk and second iteration will end returning back payload as Blk to first iteration.

\* This Blk will be again set to payload and first iteration will end returning back response as Blk

### NEW QUESTION # 132

A Database On Table Row listener retrieves data from a CUSTOMER table that contains a primary key user\_id column and an increasing kxj\_date\_time column. Neither column allows duplicate values.

How should the listener be configured so it retrieves each row at most one time?

- A. Set the target value to the last retrieved login\_date\_time value
- B. Set the watermark column to the kxj\_date\_time column
- C. Set the target value to the last retrieved user\_id value
- D. Set the watermark column to the user\_id column

**Answer: B**

Explanation:

\* Watermark allows the poll scope to poll for new resources instead of getting the same resource over and over again.

\* The database table must be ordered so that the "watermark functionality" can move effectively in the ordered list. Watermark stores the current/last picked up "record id."

\* If the Mule application is shut down, it will store the last picked up "record id" in the Java Object Store and the data will continue to exist in the file. This watermark functionality is valuable and enables developers to have increased transparency.

\* Developers do not need to create code to handle caching; it is all configurable!

\* There are two columns and both are unique but user\_id can't guarantee sequence whereas date\_time will always be in increasing order and table content can easily be ordered on the basis of last processed date\_time.

So correct answer is: Set the watermark column to the date\_time column

### NEW QUESTION # 133

How we can scale deployed Mule application vertically on cloudhub?

- A. Mule applications can be scaled only horizontally
- **B. Changing worker size**
- C. Adding multiple workers
- D. Option 1 and 2 both can be used

**Answer: B**

Explanation:

Mule applications can be scaled vertically by changing worker size. Mule applications can be scaled horizontally by adding more workers.
