Free PDF 2026 350-401: Trustable Best Implementing Cisco Enterprise Network Core Technologies (350-401 ENCOR) Study Material

You want to get the most practical and useful certificate which can reflect your ability in some area. If you choose to attend the test 350-401 certification buying our 350-401 study materials can help you pass the test and get the valuable certificate. Our company has invested a lot of personnel, technology and capitals on our products and is always committed to provide the top-ranking 350-

401 Study Materials to the clients and serve for the client wholeheartedly.

The Cisco 350-401 Exam is suitable for those IT professionals who want to develop knowledge on how to implement key enterprise network technologies, including network assurance, virtualization, and dual-stack (IPv4 & IPv6) architecture.

Cisco Implementing Cisco Enterprise Network Core Technologies (350-401 ENCOR) Sample Questions (Q31-Q36):

NEW QUESTION # 31

Drag and drop the threat defense solutions from the left onto their descriptions on the right.

□

Answer:

Explanation:

□

Explanation:

□

NEW QUESTION # 32

Refer to the exhibit. An engineer constructs an EEM applet to prevent anyone from entering configuration mode on a switch. Which snippet is required to complete the EEM applet?

□

- A. **sync no skip no**
- B. sync no skip yes
- C. sync yes skip yes
- D. sync yes skip no

Answer: A

Explanation:

The sync no option ensures that the EEM applet runs asynchronously with respect to the CLI, meaning it does not wait for the CLI command that triggered the event to complete before running. The skip no option means that the CLI command that triggered the event will not be skipped and will be executed normally after the applet runs. This combination is required to prevent entering configuration mode because it allows the applet to run and take action without interrupting or skipping the triggering command.

NEW QUESTION # 33

Wireless users report frequent disconnections from the wireless network. While troubleshooting a network engineer finds that after the user a disconnect, the connection re-establishes automatically without any input required. The engineer also notices these message logs .

□

Which action reduces the user impact?

- A. increase the AP heartbeat timeout
- B. **increase the dynamic channel assignment interval**
- C. enable coverage hole detection
- D. increase BandSelect

Answer: B

Explanation:

These message logs inform that the radio channel has been reset (and the AP must be down briefly). With dynamic channel assignment (DCA), the radios can frequently switch from one channel to another but it also makes disruption. The default DCA interval is 10 minutes, which is matched with the time of the message logs. By increasing the DCA interval, we can reduce the number of times our users are disconnected for changing radio channels.

One of the best practices to secure REST APIs is using password hash. Passwords must always be hashed to protect the system (or minimize the damage) even if it is compromised in some hacking attempts. There are many such hashing algorithms which can prove

really effective for password security e.g. PBKDF2, bcrypt and scrypt algorithms.

Other ways to secure REST APIs are: Always use HTTPS, Never expose information on URLs (Usernames, passwords, session tokens, and API keys should not appear in the URL), Adding Timestamp in Request, Using OAuth, Input Parameter Validation.

NEW QUESTION # 34

What is one difference between saltstack and ansible?

- A. SaltStack uses the Ansible agent on the box, whereas Ansible uses a Telnet server on the box
- B. SaltStack uses SSH to interact with Cisco devices, whereas Ansible uses an event bus
- C. SaltStack is constructed with minion, whereas Ansible is constructed with YAML
- D. SaltStack uses an API proxy agent to program Cisco boxes on agent mode, whereas Ansible uses a Telnet connection

Answer: C

NEW QUESTION # 35

Refer to the exhibit. What is the effect of introducing the sampler feature into the Flexible NetFlow configuration on the router?

- A. NetFlow updates to the collector are sent 50% less frequently.
- B. Every second IPv4 packet is forwarded to the collector for inspection.
- C. CPU and memory utilization are reduced when compared with what is required for full NetFlow.
- D. The resolution of sampling data increases, but it requires more performance from the router.

Answer: C

Explanation:

Flow sampling reduces the CPU overhead of analyzing traffic with Flexible NetFlow by reducing the number of packets that are analyzed.
