

Pass Guaranteed Quiz Nutanix - NCP-DB-6.10—Reliable Certification Book Torrent

P.S. Free & New NCP-DB-6.10 dumps are available on Google Drive shared by BraindumpsPrep: https://drive.google.com/open?id=1fySDCh-l1-BV_cs8ICPsFTyFJR_Cw8N

Getting a Nutanix NCP-DB-6.10 trusted certification is a way to prove your expertise and show you that you are ready all the time to take the additional responsibilities. The BraindumpsPrep NCP-DB-6.10 certification exam assists you to climb the corporate ladder easily and helps you to achieve your professional career objectives. With the BraindumpsPrep NCP-DB-6.10 Certification Exam you can get industry prestige and a significant competitive advantage.

For every candidates, practicing for the pass of the exam is an evitable process, since we can improve our ability. Our NCP-DB-6.10 Exam Torrent will provide you the practice. The pass rate is 98.88%, and if you fail to pass the test, money back guarantee. Besides, we also have online chat service stuff, if you have any questions, you can have a chat with them, or you can send emails to us, we will give you the reply as quickly as we can.

NCP-DB-6.10 Valid Test Review - NCP-DB-6.10 Latest Braindumps Book

As long as you get to know our NCP-DB-6.10 exam questions, you will figure out that we have set an easier operation system for our candidates. Once you have a try, you can feel that the natural and seamless user interfaces of our NCP-DB-6.10 study materials have grown to be more fluent and we have revised and updated NCP-DB-6.10 learning guide according to the latest development situation. In the guidance of teaching syllabus as well as theory and practice, our NCP-DB-6.10 training engine has achieved high-quality exam materials according to the tendency in the industry.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q42-Q47):

NEW QUESTION # 42

When doing an Era software upgrade for a Multi-Cluster enabled installation, which component is upgraded first?

- A. Era Date Warehouse
- B. Era Sewer
- C. Database Server Agent
- **D. Era Cluster Agent**

Answer: D

Explanation:

According to the Nutanix Database Automation (NCP-DB) learning documents, when doing an Era software upgrade for a Multi-Cluster enabled installation, the Era Cluster Agent is upgraded first. This is the first component in a Nutanix Environment Upgrade cycle. The Era Cluster Agent is crucial for managing and monitoring the health of the Nutanix clusters. Please refer to the official Nutanix documentation and training materials for more detailed information.

NEW QUESTION # 43

An administrator is interested in using profiles to simplify the database provisioning process. The profile needs to include information related to the SQL service startup account, and the NDB worker service account. Which profile would help the administrator accomplish this task?

- A. Network
- B. Software
- **C. Windows Domain**
- D. Database Parameter

Answer: C

Explanation:

The correct answer is A because the Windows Domain profile is the profile that includes information related to the SQL service startup account and the NDB worker service account. A Windows Domain profile is a collection of settings that define how NDB manages Windows-based database servers and databases. It contains the following information:

The domain name and credentials to join the database server VMs to the domain
 The SQL service startup account and password to run the SQL Server service on the database server VMs
 The NDB worker service account and password to run the NDB Database Agent service on the database server VMs
 The SQL Server authentication mode to use for the databases
 By using a Windows Domain profile, the administrator can simplify the database provisioning process by applying the same settings to multiple database server VMs and databases, without having to manually enter them each time. The other options are not correct because they describe different types of profiles that do not include information related to the SQL service startup account and the NDB worker service account.

NEW QUESTION # 44

An administrator would like to use Era for Copy Data Management operations on an Availability Group (AG) database. The AG database is hosted on replicas with different named instances, as shown below:

- SQLAGN1\EMR
- SQLAGN2\EMR
- SQLAGN3\DW

SQLAGN3\DW is running the Analytics service that needs real-time data. How should the administrator register the database in Era?

- **A. Register the database as an Availability database.**
- B. Register the SQLAGN3 from AG cluster and register the database as Availability database,
- C. Register the database as a Standalone database,

Answer: A

Explanation:

According to the Nutanix Database Automation (NCP-DB) learning documents, when dealing with an Availability Group (AG) database, the database should be registered as an Availability database. This is because the AG database is hosted on replicas with different named instances, and registering it as an Availability database allows for Copy Data Management operations to be performed across all instances. This is particularly important when services such as the Analytics service running on SQLAGN3\DW require real-time data.

NEW QUESTION # 45

An administrator needs to create a custom PostgreSQL HA software profile. Which software component manages the state of the cluster and handles failover?

- A. etcd
- **B. Patroni**
- C. keepalived
- D. HAProxy

Answer: B

Explanation:

NDB supports PostgreSQL HA software profiles for provisioning PostgreSQL databases with high availability. PostgreSQL HA software profiles consist of three components: etcd, HAProxy, and Patroni.

etcd is a distributed key-value store that provides a reliable way to store configuration data across a cluster of machines. etcd is used by Patroni to store and synchronize the cluster state and configuration.

HAProxy is a load balancer that distributes incoming requests to the PostgreSQL nodes.

HAProxy is used to expose a single endpoint for database connections even as the roles of the individual nodes change.

Patroni is a template for PostgreSQL high availability. Patroni is responsible for managing the state of the cluster and handling failover. Patroni uses etcd as the distributed configuration store and relies on HAProxy for load balancing.

Therefore, the software component that manages the state of the cluster and handles failover is Patroni.

NEW QUESTION # 46

Which Era component collects logs and snapshots from the database?

- **A. Time Machine**
- B. Era Database Agent
- C. Profiles
- D. SLAs

Answer: A

Explanation:

The Era copy data management service includes several components, one of which is the Time Machine. The Time Machine is responsible for collecting logs and snapshots from the database.

This functionality allows for granular clone and refresh operations, making it a crucial part of the Nutanix Era's database as a service (DBaaS) solution.

NEW QUESTION # 47

.....

Please don't worry about the purchase process because it's really simple for you. The first step is to select the NCP-DB-6.10 test guide, choose your favorite version, the contents of different version are the same, but different in their ways of using. The second step: fill in with your email and make sure it is correct, because we send our Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 learn tool to you through the email. Later, if there is an update, our system will automatically send you the latest Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 version. At the same time, choose the appropriate payment method, such as SWREG, DHPay, etc. Next, enter the payment page, it is noteworthy that we only support credit card payment, do not support debit card. Generally, the system will send the NCP-DB-6.10 Certification material to your mailbox within 10 minutes. If you don't receive it please contact our after-sale service timely.
