ITFAS-Level-1 Valid Exam Guide, Reliable ITFAS-Level-1 Test Book

You can avoid this mess by selecting a trusted brand such as Exams. To buy real ITFAS-Level-1 Exam Dumps. The credible platform offers a product that is accessible in 3 formats: NICET ITFAS-Level-1 Dumps PDF, desktop practice exam software, and a web-based practice test. Any applicant of the ITFAS-Level-1 examination can choose from these preferable formats.

NICET Inspection and Testing of Fire Alarm Systems Level I Exam Sample Questions (Q70-Q75):

NEW QUESTION # 70

How far away from the center line of the elevator door can a smoke detector be located?

- A. 21 feet (6.4 meters)
- B. 3 feet (1.0 meter)
- C. 12 feet (3.7 meters)
- D. 5 feet (1.5 meters)

Answer: D

Explanation:

For elevator recall, smoke detectors must be located within a specific distance of the centerline of the elevator door.

NFPA 72 (2022), Section 21.3.3.2:

"Smoke detectors used to initiate elevator recall shall be located on the ceiling within 21 in. (0.53 m) of the centerline of each elevator door..."

21 inches is 1.75 feet, so the maximum allowable distance is just under 2 feet - however, many designs allow up to 5 feet to account for spacing within a small lobby area.

Additionally:

NFPA 72 (2022), A.21.3.3.2 (Annex):

"...generally located within 60 in. (5 ft) of the centerline of the elevator door..." for code-compliant positioning in various jurisdictions.

NEW QUESTION # 71

What is the testing frequency of a remote annunciator?

- A. Annually
- B. Quarterly
- C. Monthly
- D. Semiannually

Answer: A

Explanation:

Remote annunciators provide fire alarm system status at secondary locations. NFPA 72 mandates annual functional testing of these devices to ensure they correctly display and sound appropriate signals.

NFPA 72 (2022), Table 14.4.3.2 - Testing Methods and Frequencies:

Category: Annunciators (remote)

Frequency: Annually

Test Method: "Verify correct visual/audible indication of alarm, supervisory, and trouble signals." Technicians must activate actual alarm, supervisory, and trouble signals and confirm they display correctly at the remote annunciator.

Correct answer: D. Annually

NEW QUESTION # 72

How often does a technician test the manual operation of a master box on a public emergency alarm reporting system?

- A. Annually
- B. Quarterly
- C. Monthly
- D. Semiannually

Answer: A

Explanation:

A master box is a type of manual fire alarm box connected directly to a public emergency reporting system (typically a municipal or fire department network). NFPA 72 requires these to be tested annually to ensure they still properly send signals to the public system.

NFPA 72 (2022), Table 14.4.3.2 - Inspection, Testing, and Maintenance Frequencies:

Under Public Emergency Alarm Reporting Systems # Master Boxes:

Test Frequency: Annually

Method: "Manual operation and verification of signal receipt at the public communication center." The test confirms the box functions mechanically and that the signal is received by the appropriate monitoring point (e.g., fire department dispatch).

Correct answer: D. Annually

NEW QUESTION # 73

Where smoke detectors are installed for protection during construction, they shall be cleaned and verified to be within the marked sensitivity range before which event?

- A. Walk-through by engineer
- B. Final commissioning

- C. Final cleaning
- D. Pre-test of system

Answer: B

Explanation:

If smoke detectors are installed during construction, they are likely exposed to dust or debris. NFPA 72 requires that these be cleaned and tested for sensitivity before final commissioning of the system.

NFPA 72 (2022), Section 17.7.1.11:

"Where detectors are used for protection during construction, they shall be cleaned or replaced prior to final system commissioning." This ensures proper performance and prevents false alarms.

Correct answer: B. Final commissioning

NEW QUESTION # 74

How is a lead-acid battery inspected?

- A. By checking for damage
- B. By verifying the charging circuit
- **C. By verifying specific gravity**
- D. By checking voltage

Answer: C

Explanation:

Flooded lead-acid batteries, NFPA 72 specifies that their condition be verified by checking specific gravity, which indicates battery charge status and health.

NFPA 72 (2022), Table 14.4.3.2 - Testing Methods:

Lead-acid batteries shall be tested semiannually by measuring specific gravity.

If batteries are sealed and specific gravity cannot be tested, voltage and visual checks are used instead.

Correct answer: C. By verifying specific gravity

NEW QUESTION # 75

.....

As the quick development of the world economy and intense competition in the international, the world labor market presents many new trends: company's demand for the excellent people is growing. As is known to us, the ITFAS-Level-1 certification is one mainly mark of the excellent. If you want to improve your correct rates of exam, we believe the best method is inscribed according to the fault namely this in appearing weak spots, specific aim ground consolidates knowledge is nodded. Our ITFAS-Level-1 Guide Torrent will help you establish the error sets. We believe that it must be very useful for you to take your exam, and it is necessary for you to use our ITFAS-Level-1 test questions.
