Tough questions and answers for AZ-500 will help you master the information for this exam.

Marks for the AZ-500 exam are designed to be high. Interactive format of exam AZ-500 is a great feature. Posture of Microsoft AZ-500 exam material is designed to be rewarding. Reach the high score and land a huge salary by scoring above 80% in the AZ-500 exam. Uncertified people are waiting to take the AZ-500 exam. Position of candidates who pass Microsoft AZ-500 exam is very high. Objects of this exam are difficult to achieve without the study material. Individuals who pass the AZ-500 exam are highly

desirable in the market. Sections of the AZ-500 exam are conveniently labeled.

## Microsoft Azure Security Technologies Sample Questions (Q450-Q455):

### NEW QUESTION # 450

#### SIMULATION

You need to ensure that connections from the Internet to VNET1\subnet0 are allowed only over TCP port 7777. The solution must use only currently deployed resources.

To complete this task, sign in to the Azure portal.

- A. You need to configure the Network Security Group that is associated with subnet0.
  - \* In the Azure portal, type Virtual Networks in the search box, select Virtual Networks from the search results then select VNET1. Alternatively, browse to Virtual Networks in the left navigation pane.
  - \* In the properties of VNET1, click on Subnets. This will display the subnets in VNET1 and the Network Security Group associated to each subnet. Note the name of the Network Security Group associated to Subnet0.
  - \* Type Network Security Groups into the search box and select the Network Security Group associated with Subnet0.
  - \* In the properties of the Network Security Group, click on Inbound Security Rules.
  - \* Click the Add button to add a new rule.
  - \* In the Source field, select Service Tag.
  - \* In the Source Service Tag field, select Internet.
  - \* Leave the Source port ranges and Destination field as the default values (\* and All).
  - \* In the Destination port ranges field, enter 7777.
  - \* Change the Protocol to TCP.
  - \* Leave the Action option as Allow.
  - \* Change the Priority to 100.
  - \* Change the Name from the default Port\_8080 to something more descriptive such as Allow\_TCP\_7777\_from\_Internet. The name cannot contain spaces.
  - \* Click the Add button to save the new rule.
- B. You need to configure the Network Security Group that is associated with subnet0.
  - \* In the Azure portal, type Virtual Networks in the search box, select Virtual Networks from the search results then select VNET1. Alternatively, browse to Virtual Networks in the left navigation pane.
  - \* In the properties of VNET1, click on Subnets. This will display the subnets in VNET1 and the Network Security Group associated to each subnet. Note the name of the Network Security Group associated to Subnet0.
  - \* Type Network Security Groups into the search box and select the Network Security Group associated with Subnet0.
  - \* In the properties of the Network Security Group, click on Inbound Security Rules.
  - \* In the Destination port ranges field, enter 7777.
  - \* Change the Protocol to TCP.
  - \* Leave the Action option as Allow.
  - \* Change the Priority to 100.
  - \* Change the Name from the default Port\_8080 to something more descriptive such as Allow\_TCP\_7777\_from\_Internet. The name cannot contain spaces.
  - \* Click the Add button to save the new rule.

**Answer: A**

### NEW QUESTION # 451

You have an Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com.

The User administrator role is assigned to a user named Admin1.

An external partner has a Microsoft account that uses the user1@outlook.com sign in.

Admin1 attempts to invite the external partner to sign in to the Azure AD tenant and receives the following error message: "Unable to invite user user1@outlook.com Generic authorization exception."

You need to ensure that Admin1 can invite the external partner to sign in to the Azure AD tenant.

What should you do?

- A. From the Users blade, modify the External collaboration settings.
- B. From the Organizational relationships blade, add an identity provider.
- C. From the Custom domain names blade, add a custom domain.
- D. From the Roles and administrators blade, assign the Security administrator role to Admin1.

**Answer: A**

Explanation:

You need to allow guest invitations in the External collaboration settings.

#### NEW QUESTION # 452

You need to configure SQLDB1 to meet the data and application requirements.

Which three actions should you recommend be performed in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

□

**Answer:**

Explanation:

□

1 - From the Azure portal, create an Azure AD administrator for LitwareSQLServer1

2 - connect to SQLDB1 by using SSMS

3 - In SQLDB1, create contained database users

#### NEW QUESTION # 453

You have an Azure subscription that contains an Azure key vault named ContosoKey1.

You create users and assign them roles as shown in the following table.

□

You need to identify which users can perform the following actions:

\* Delegate permissions for ContosoKey1.

\* Configure network access to ContosoKey1.

Which users should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

□

**Answer:**

Explanation:

□
