## Ace exam on your first attempt with actual Lpi 101-500 questions

Under the dominance of knowledge-based economy, we should keep pace with the changeable world and renew our knowledge in pursuit of a decent job and higher standard of life. In this circumstance, possessing a 101-500 certification in your pocket can totally increase your competitive advantage. Therefore our 101-500 Study Guide can help you with dedication to realize your dream, and our 101-500 training guide is a great opportunity for you to improve working efficiency and make the process of our work more easily and smoothly.

Lpi 101-500 exam, also known as the LPIC-1 Exam 101, Part 1 of 2, version 5.0, is a certification exam designed for professionals seeking to validate their skills in Linux system administration. 101-500 Exam is the first step towards earning the LPIC-1 certification, which is a globally recognized certification in Linux administration.

## Lpi LPIC-1 Exam 101, Part 1 of 2, version 5.0 Sample Questions (Q261-Q266):

### NEW QUESTION # 261

Which of the following commands can be used to instruct the init process to switch runlevels?  
(Choose TWO correct answers)

- A. reinit
- B. telinit
- C. runlevel
- D. initctl
- E. init

**Answer: B,E**

### NEW QUESTION # 262

User Joseph has successfully extracted and compiled a program from source code. Installing the binaries produces errors. What is the most likely reason?

- A. The source code was compiled for a different CPU
- B. The binaries require root privileges to be installed
- C. The wrong prefix was used during configuration of the source code
- D. The permissions set in the /usr/bin directory are wrong

**Answer: B**

### NEW QUESTION # 263

Which of the following GNU commands would be the most likely command you'd use to find the system load average?

- A. top
- B. nice
- C. cpustat
- D. loadavg
- E. ps

**Answer: A**

### NEW QUESTION # 264

Which of the following shell commands makes the already defined variable TEST visible to new child processes? (Choose two.)

- A. export -v TEST
- B. visible TEST
- C. declare -x TEST
- D. export TEST
- E. declare +x TEST

**Answer: A,D**

Explanation:

The export command makes a shell variable available to child processes of the current shell. It can also be used to list all the exported variables. The -v option makes the export command print the variable name and value for each exported variable. The declare command can be used to set or display the attributes and values of shell variables. The -x option makes a variable exported to subsequent commands. The +x option removes the export attribute from a variable. The visible command is not a valid shell

command. References:

### NEW QUESTION # 265

Which of the following directories on a 64-bit Linux system typically contain shared libraries? (Choose two.)

- A. `/usr/lib64/`
- B. `/opt/lib64/`
- C. `~/lib64/`
- D. `/var/lib64/`
- E. `/lib64/`

**Answer: A,E**

Explanation:

The directories on a 64 bit Linux system that typically contain shared libraries are `/usr/lib64/` and `/lib64/`.

Shared libraries are binary files that provide reusable functions, routines, classes, data structures, and so on for programs and applications. They are loaded into memory before the program starts and shared by multiple processes that use the same library. Shared libraries are usually stored in standard locations in the file system, such as `/usr/lib`, `/usr/local/lib`, `/lib`, and `/lib64` for 32 bit systems, and `/usr/lib64`, `/usr/local/lib64`, `/lib64`, and

`/lib` for 64 bit systems<sup>12</sup>. The `/usr/lib64` and `/lib64` directories contain the shared libraries for the system and user applications, respectively. The other directories are either non-existent or do not contain shared libraries.

The `~/lib64/` directory is not a standard location for shared libraries, and it is unlikely that a user would have such a directory in their home directory. The `/var/lib64/` directory is also not a standard location for shared libraries, and it is usually used for variable data files that are specific to a package or application. The `/opt`

`/lib64/` directory is not a standard location for shared libraries, and it is usually used for optional software packages that are installed in the `/opt` directory<sup>3</sup>. References:
