EAEP2201 New Questions | EAEP2201 Exam Question

As long as you have a will, you still have the chance to change. Once you are determined to learn our EAEP2201 study materials, you will become positive and take your life seriously. Through the preparation of the EAEP2201 exam, you will study much practical knowledge. Of course, passing the exam and get the EAEP2201 certificate is just a piece of cake. With the high pass rate of our EAEP2201 practice braindumps as 98% to 100%, i can say that your success is guaranteed.

Esri EAEP2201 (Enterprise Administration Professional 2201) Exam is a professional certification exam offered by Esri Inc. It is designed to test an individual's knowledge and skills in administering and managing enterprise-level GIS (Geographic Information System) solutions using Esri software technologies. EAEP2201 Exam is intended for professionals who work in GIS administration and management roles and have a good understanding of the Esri software suite.

Esri Enterprise Administration Professional 2201 Sample Questions (Q39-Q44):

NEW QUESTION # 39
An organization recently upgraded Portal for ArcGIS. The organization must reduce the number of named users to the maximum allowed by the authorization file and delete members in bulk.
Which action should the administrator perform?

- A. Delete users using the Member tab

- B. Use command line utilities
- C. Batch delete users with ArcPy

Answer: C

NEW QUESTION # 40
A GIS administrator is analyzing the usage statistics of ArcGIS Enterprise. The administrator needs to pull tabular statistics on various groups and users about the type of content that they produce and consume.
Which action should the administrator perform?

- A. Use ArcGIS Monitor to capture desired information over a period of time in a report.
- B. Run usage reports in Portal for ArcGIS to determine the effect on the organization.
- C. Open ArcGIS Server statistics to create a report for commonly used items.

Answer: B

Explanation:
Portal for ArcGIS provides built-in usage reports that allow administrators to monitor how members are using, sharing, and contributing resources. These reports offer insights into content creation, usage patterns, and group activities. Administrators can generate and export these reports in tabular formats for further analysis.
ArcGIS Server statistics focus on service-level metrics and do not provide detailed user or group content statistics. ArcGIS Monitor captures system performance metrics but is not designed for detailed content usage analysis by users or groups.
Reference Source:ArcGIS Enterprise documentation on usage reports in Portal for ArcGIS.

NEW QUESTION # 41
A GIS administrator is responsible for maintaining the stability of a large internal ArcGIS Enterprise deployment. After the Domain CA certificate is replaced with a new one andthe new PKCS#12 format PFX file is imported into all Portal for ArcGIS, ArcGIS Server, and ArcGIS Data Store deployments, the following issues are identified:
* When connecting directly to the Portal for ArcGIS administration endpoint via port 7443, the new certificate is not recognized and is considered invalid
* When connecting directly to the ArcGIS Server administration endpoint via port 6443, the new certificate is not recognized and is considered invalid
* When connecting to the ArcGIS Data Store endpoint via port 2443, the new certificate is recognized and considered valid What is causing this issue?

- A. Domain CA certificates must be imported using a DER encoded binary X.509 (CER) format file for ArcGIS Server and Portal for ArcGIS
- B. ArcGIS Server and Portal for ArcGIS require that new root and new issuing authority certificates be imported explicitly into the software
- C. Domain CA certificates are no longer supported by ArcGIS Server and Portal for ArcGIS and should be replaced by self-signed certificates
- D. ArcGIS Server and Portal for ArcGIS are not compatible with PKCS#12 certificates

Answer: B

Explanation:
When replacing SSL certificates in ArcGIS Enterprise components,ArcGIS Server and Portal for ArcGIS require the root and intermediate (issuing) certificates to be explicitly importedinto their trust stores.
Unlike the ArcGIS Data Store, which can often rely on the system-level trust store, ArcGIS Server and Portal maintain their owncertificate trust management.
From the official ArcGIS Enterprise documentation:
"When using certificates issued by an internal or external CA, it is essential to also import the corresponding root and intermediate certificates into the Portal for ArcGIS and ArcGIS Server trust stores to ensure the certificate chain is validated properly."
* OptionBis incorrect. Domain CA certificatesare supported and recommendedover self-signed certificates for internal deployments.
* OptionCrefers to an acceptable format butdoes not address the issue, which is about importing the chain of trust.
* OptionDis incorrect; PKCS#12 (.pfx) certificates are supported but must be paired with the correct chain files.
Reference:ArcGIS Enterprise -Managing CA certificates in Portal and ArcGIS Server environments

NEW QUESTION # 42

An organization must limit the users who can publish services that reference data in a user-managed database.
At the same time, all users must be able to access and edit the data in that user-managed data store.
How should the database be registered?

- A. As a relational data store in ArcGIS Data Store
- B. As a data store item in the ArcGIS Enterprise portal
- C. As an ArcGIS-managed data store in Server Manager

Answer: B

Explanation:
Registering the database as a data store item in the ArcGIS Enterprise portal allows administrators to control who can publish services referencing the data. By sharing the data store item with specific groups or individuals, administrators can restrict publishing capabilities to authorized users. At the same time, all users can be granted appropriate permissions to access and edit the data directly in the user-managed database, independent of the publishing privileges.
Registering the database as an ArcGIS-managed data store in Server Manager does not provide the same level of control over publishing permissions. Registering it as a relational data store in ArcGIS Data Store is intended for managed data storage and does not apply to user-managed databases.
Reference Source:ArcGIS Enterprise documentation on registering user-managed data stores and controlling access.

NEW QUESTION # 43

A GIS administrator needs to add a member to the ArcGIS Enterprise organization. This member will perform publishing and editing workflows.
Which user type and role should the member be assigned?

- A. The GIS Professional user type and the Data Editor role
- B. The Editor user type and the Publisher role
- C. The Creator user type and the Publisher role

Answer: C

Explanation:
In ArcGIS Enterprise, the Creator user type includes full privileges for content creation, sharing, and administration. When paired with the Publisher role, it grants the user the ability to publish hosted feature layers, map image layers, and other services, as well as perform editing tasks on existing data. This combination is specifically designed for users who require both publishing and editing capabilities.
The Editor user type is limited to editing and cannot publish content. The GIS Professional user type provides access to ArcGIS Pro but, when assigned the Data Editor role, restricts the user from publishing content. Therefore, only the Creator user type with Publisher role supports both publishing and editing workflows.
