NSE Certification Program

EXAMINATION SUMMARY REPORT

Fortinet NSE 6 - FortiMail 7.4 Administrator

Candidate Name: [redacted]
Registration Number: [redacted]
Examination Date: December 23, 2025
Grade: Pass

Congratulations on passing the Fortinet NSE 6 - FortiMail 7.4 Administrator exam!

Performance by Exam Section

Performance on each exam section is shown only for reference. The exam grade is based on the overall exam performance and not on the performance of individual exam sections. The main topics assessed on the exam are listed, with the proportion filled indicating the strength of each section. The chart is based on a 0% - 100% scale. If a bar is not displayed for an exam section, no questions were answered correctly for that topic.

Initial Deployment and Basic Configuration
Email Flow and Authentication
Email Security
Encryption
Server Mode and Transparent Mode

Your Fortinet NSE Training Institute account will be updated within 5 business days.
A digital exam badge will be issued for passing this exam. A digital certification badge and a printable certificate will be issued for achieving Certification once all certification requirements are met.

With the help of performance reports of Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7_SSE_AD-25) Desktop practice exam software, you can gauge and improve your growth. You can also alter the duration and Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7_SSE_AD-25) questions numbers in your practice tests. Questions of this Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7_SSE_AD-25) mock test closely resemble the format of the actual test. As a result, it gives you a feeling of taking the actual test.

You don't need to enroll yourself in expensive NSE7_SSE_AD-25 exam training classes. With the Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7_SSE_AD-25) valid dumps, you can easily prepare well for the actual Fortinet NSE7_SSE_AD-25 Exam at home. Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7_SSE_AD-25) practice test software is compatible with windows and the web-based software will work on many operating systems.

Exam NSE7_SSE_AD-25 Bible & NSE7_SSE_AD-25 Original Questions

TestkingPDF provides Fortinet NSE7_SSE_AD-25 desktop-based practice software for you to test your knowledge and abilities. The NSE7_SSE_AD-25 desktop-based practice software has an easy-to-use interface. You will become accustomed to and familiar with the free demo for Fortinet NSE7_SSE_AD-25 Exam Questions. Exam self-evaluation techniques in our NSE7_SSE_AD-25 desktop-based software include randomized questions and timed tests. These tools assist you in assessing your ability and identifying areas for improvement to pass the Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator exam.

Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator Sample Questions (Q19-Q24):

NEW QUESTION # 19

A company must provide access to a web server through FortiSASE secure private access for contractors.
What is the recommended method to provide access? (Choose one answer)

- A. Update the PAC file with the web server URL and share it with contractors.
- B. Publish the web server URL on a bookmark portal and share it with contractors.
- C. Configure a TCP access proxy forwarding rule and push it to the contractor FortiClient endpoint.
- D. Update the DNS records on the endpoint to access private applications.

Answer: B

Explanation:
When providing Secure Private Access (SPA) to external contractors who may not be using managed corporate devices, FortiSASE offers specific methods to ensure security while maintaining ease of use.
* Bookmark Portal (Clientless Access): For web-based resources like a web server, the recommended and most efficient method for contractors is to use the ZTNA portal (bookmark portal). This allows for clientless access, meaning the contractor does not need to install the FortiClient agent or any specific software on their personal machine.
* Workflow: The administrator publishes the web server URL as a bookmark within the FortiSASE portal. Contractors simply log into the secure SASE web portal via their browser, authenticate, and click the bookmark to access the internal server.
* Security Benefits: This method leverages the FortiSASE ZTNA access proxy to mediate the connection. It ensures that the contractor is authenticated and that the traffic is inspected without exposing the internal network directly to the contractor's device.
* Analysis of Incorrect Options:
* Option A: TCP forwarding rules require the FortiClient agent to be installed and managed on the endpoint. Contractors often use unmanaged devices where installing agents is restricted or undesirable.
* Option C: Updating a PAC (Proxy Auto-Configuration) file is part of a Secure Web Gateway (SWG) deployment for internet access, not for routing traffic to private internal web servers via an SPA hub.1
* Option D: Manually updating DNS records on a contractor's endpoint is an unscalable, insecure, and administratively heavy task that does not provide the session-level security required by ZTNA.

NEW QUESTION # 20
Which FortiSASE feature ensures least-privileged user access to all applications?

- A. thin branch SASE extension
- B. secure web gateway (SWG)
- C. SD-WAN
- D. zero trust network access (ZTNA)

Answer: D

Explanation:
Zero Trust Network Access (ZTNA) is the FortiSASE feature that ensures least-privileged user access to all applications. ZTNA operates on the principle of "never trust, always verify," providing secure access based on the identity of users and devices, regardless of their location.
* Zero Trust Network Access (ZTNA):
* ZTNA ensures that only authenticated and authorized users and devices can access applications.
* It applies the principle of least privilege by granting access only to the resources required by the user, minimizing the potential for unauthorized access.
* Implementation:
* ZTNA continuously verifies user and device trustworthiness and enforces granular access control policies.
* This approach enhances security by reducing the attack surface and limiting lateral movement within the network.
References:
FortiOS 7.6 Administration Guide: Provides detailed information on ZTNA and its role in ensuring least- privileged access.
FortiSASE 23.2 Documentation: Explains the implementation and benefits of ZTNA within the FortiSASE environment.

NEW QUESTION # 21
Which statement about FortiSASE and SAML is true? (Choose one answer)

- A. FortiSASE includes IdP functionality and uses it for SAML group matching.
- B. FortiSASE acts as the IdP and can perform SAML group matching internally.
- C. FortiSASE acts as the SP, relies on an external IdP, and can use SAML group matching.

- D. FortiSASE supports SAML login but cannot use SAML group matching.

Answer: C

Explanation:
FortiSASE utilizes Security Assertion Markup Language (SAML) to provide a seamless Single Sign-On (SSO) experience for remote users connecting to the cloud infrastructure.
* Role Identification: In a SAML exchange, FortiSASE functions as the Service Provider (SP). It relies on an external Identity Provider (IdP)-such as Microsoft Entra ID (formerly Azure AD), Okta, or FortiAuthenticator-to authenticate the user's identity and provide security assertions.2
* SAML Group Matching: One of the core features of the FortiSASE SAML implementation is the ability to perform group matching. During the authentication process, the IdP sends a SAML assertion that typically includes an "Attribute Statement" containing the user's group memberships.3 FortiSASE captures this attribute and matches it against locally defined SAML user groups.
* Policy Enforcement: This group matching capability is critical because it allows administrators to apply different Security Internet Access (SIA) or Secure Private Access (SPA) policies based on the user's role (e.g., "Marketing" vs. "Finance") rather than managing individual users manually.
* Analysis of Incorrect Options: * Options C and D are incorrect because FortiSASE does not natively act as a SAML IdP; it is designed to consume assertions from professional identity management platforms.
* Option B is incorrect because FortiSASE fully supports and relies upon group matching for enterprise-scale policy management.

NEW QUESTION # 22
Which two settings are automatically pushed from FortiSASE to FortiClient in a new FortiSASE deployment with default settings? (Choose two answers)

- A. FortiSASE certificate authority (CA) certificate
- B. Zero trust network access (ZTNA) tags1
- C. Tunnel profile
- D. Real-time protection

Answer: A,C

Explanation:
In a standard FortiSASE agent-based deployment, the FortiSASE Endpoint Management Service (EMS) acts as the central control plane for all managed FortiClient instances. When an endpoint is onboarded, the system is designed to provide "zero-touch" configuration for the core connectivity and security components.
* CA Certificate (A): For SSL deep inspection to function without triggering browser certificate warnings, the endpoint must trust the FortiSASE CA. FortiSASE supports automatically installing the FortiSASE CA certificate for managed agent-based users. Once the endpoint connects to the FortiSASE EMS, the service automatically deploys the CA certificate to the trusted certificate store of the client machine.
* Tunnel Profile (B): To enable Secure Internet Access (SIA), FortiClient requires a pre-configured VPN or tunnel profile that points to the FortiSASE cloud infrastructure. In a new deployment with default settings, FortiSASE automatically pushes the tunnel profile (including gateway information and auto-connect settings) to the FortiClient endpoint. This allows the user to establish a full-tunnel connection to the nearest Security PoP immediately after onboarding.
* Analysis of Incorrect Options:
* Real-time protection (C): While FortiSASE can manage Malware Protection and Sandbox settings, specific "Real-time protection" features often require manual activation or specific configuration within the Malware Protection profile before being pushed; they are not necessarily
"automatically" active in the absolute default state without a profile assignment.
* ZTNA tags (D): ZTNA tags are dynamic security posture attributes. While FortiSASE evaluates the endpoint to determine which tags apply, the tags themselves are not "pushed" to the client as a setting; rather, the ZTNA connection rules are pushed, and the tags are synchronized back to the security fabric for posture enforcement.

NEW QUESTION # 23
Which two additional features does FortiClient integration provide with FortiSASE, when compared to secure web gateway (SWG) deployment? (Choose two.)

- A. device posture check
- B. inline-CASB protection

- C. vulnerability management
- D. SSL inspection

Answer: A,C

Explanation:
When FortiClient is integrated with FortiSASE, it enables vulnerability management and device posture checks, allowing for advanced endpoint compliance enforcement - capabilities not available in standalone secure web gateway (SWG) deployments.

NEW QUESTION # 24
.....

Everyone has different learning habits, NSE7_SSE_AD-25 exam simulation provide you with different system versions. Based on your specific situation, you can choose the version that is most suitable for you, or use multiple versions at the same time. After all, each version of NSE7_SSE_AD-25 Preparation questions have its own advantages. If you are very busy, you can only use some of the very fragmented time to use our NSE7_SSE_AD-25 study materials.
