## Latest Fortinet FCP\_FMGI\_AD-7.4 Exam Simulator, FCP\_FMGI\_AD-7.4 Pass Guaranteed

We offer you free demo to you to have a try before buying FCP\_FMGI\_AD-7.4 study guide, therefore you can have a better understanding of what you are going to buy. Free demo can be find in our website, if you are quite satisfied with the free demo, just add the FCP\_FMGI\_AD-7.4 study guide to shopping cart, after you buy it, our system will send the downloading link and password to you within ten minutes, and you can start your learning right now. Moreover, we offer you free update for one year after you buy the FCP\_FMGI\_AD-7.4 Exam Dumps, therefore you can get the latest version timely.

## Fortinet FCP - FortiManager 7.4 Administrator Sample Questions (Q25-Q30):

**NEW QUESTION # 25**  
Exhibit.

Given the configuration shown in the exhibit, which two statements are true? (Choose two.)

- A. The FortiManager ADOM is locked by the administrator.
- B. An administrator can also lock the Local-FortiGate\_root policy package.
- C. FortiManager is in workflow mode.
- D. The FortiManager ADOM workspace mode is set to Normal

**Answer: B,C**

## NEW QUESTION # 26

Refer to the exhibit.

A junior administrator is troubleshooting a FortiManager connectivity issue that is occurring with a managed FortiGate device. Given the FortiManager device manager settings shown in the exhibit, what can you conclude from this scenario?

- A. The administrator can reclaim the FortiGate to FortiManager protocol (FGFM) tunnel to get the device online.
- B. The administrator recently restored a FortiManager configuration file.
- C. FortiManager lost internet connectivity, therefore, the device appears to be down.
- D. The administrator must refresh the device to restore connectivity.

**Answer: A**

Explanation:

\* Option C: The administrator can reclaim the FortiGate to FortiManager protocol (FGFM) tunnel to get the device online. This is the correct answer. The exhibit shows a device in "Unknown" status, which indicates that the FortiManager cannot currently communicate with the device. Reclaiming the FGFM tunnel will help to restore connectivity by re-establishing the management tunnel between the FortiManager and the FortiGate.

Explanation of Incorrect Options:

\* Option A: The administrator must refresh the device to restore connectivity is incorrect because refreshing the device is unlikely to solve the connection issue when the status is "Unknown."

\* Option B: FortiManager lost internet connectivity, therefore, the device appears to be down is incorrect because FortiManager does not require internet connectivity to manage a FortiGate; it needs a direct connection to the device.

\* Option D: The administrator recently restored a FortiManager configuration file is incorrect because the exhibit does not indicate a recent restoration of configuration.

FortiManager References:

\* Refer to "FortiManager Administration Guide" and the section on "Device Management and Connectivity" for more information about reclaiming FGFM tunnels.

## NEW QUESTION # 27

What is the purpose of ADOM revisions?

- A. To save the FortiManager configuration in the System Checkpoints
- B. To save the current state of the whole ADOM
- C. To revert individual policy packages and device-level settings for a managed FortiGate
- D. To save the current state of all policy packages and objects for an ADOM

**Answer: D**

Explanation:

\* Option B: To save the current state of all policy packages and objects for an ADOM is the correct answer. ADOM (Administrative Domain) revisions in FortiManager are used to create a snapshot of the current state of all policy packages and objects associated with an ADOM. This allows administrators to save a specific configuration state and revert to it if necessary. It helps in managing changes and recovering from configuration errors or unintended changes.

\* Explanation of Incorrect Options:

\* Option A: To save the current state of the whole ADOM is incorrect because ADOM revisions specifically save only the policy packages and object configurations, not the entire state of the ADOM, which may include logs, reports, and other non-policy data.

\* Option C: To revert individual policy packages and device-level settings for a managed FortiGate is incorrect as ADOM revisions are not meant for reverting individual policy packages or device settings; they are designed to handle the entire set of policy packages and objects within an ADOM.

\* Option D: To save the FortiManager configuration in the System Checkpoints is incorrect because ADOM revisions do not function as system checkpoints for FortiManager itself; they are specific to ADOM policy packages and objects.

FortiManager References:

\* Refer to the FortiManager 7.4 Administration Guide, "ADOM Management" section, which describes the purpose and usage of ADOM revisions for configuration management and restoration.

## NEW QUESTION # 28

Refer to the exhibit. How will FortiManager try to get updates for antivirus and IPS?

| FortiManager # diagnose fmupdate view-serverlist fds |                   |      |          |          |         |  |
|--|-------------------|------|----------|----------|---------|--|
| Fortiguard Server Comm : Enabled                     |                   |      |          |          |         |  |
| Server Override Mode : Strict                        |                   |      |          |          |         |  |
| FDS server list :                                    |                   |      |          |          |         |  |
| Index  | Address           | Port | TimeZone | Distance | Source  |  |
| *0   | 10.0.1.50         | 8890 | -5       | 0        | CLI     |  |
| 1  | 96.45.33.89       | 443  | -5       | 0        | FDNI    |  |
| 2  | 96.45.32.81       | 443  | -5       | 0        | FDNI    |  |
| ...  |                   |      |          |          |         |  |
| 9  | fds1.fortinet.com | 443  | -5       | 0        | DEFAULT |  |

- A. From the list of configured override servers or public FDN servers
- B. From the default server fds1.fortinet.com
- C. From public FDNI server IP address with the fourth highest octet only
- D. From the configured override server IP address 10.0.1.50 only

**Answer: D**

Explanation:

As the server override mode is strict, there is no fallback. FMG will communicate only with server configured in override server list.

## NEW QUESTION # 29

Refer to the exhibit.

A junior administrator is troubleshooting a FortiManager connectivity issue that is occurring with a managed FortiGate device. Given the FortiManager device manager settings shown in the exhibit, what can you conclude from this scenario?

- A. The administrator can reclaim the FortiGate to FortiManager protocol (FGFM) tunnel to get the device online.
- B. The administrator recently restored a FortiManager configuration file.
- C. FortiManager lost internet connectivity, therefore, the device appears to be down.**
- D. The administrator must refresh the device to restore connectivity.

**Answer: C**

#### NEW QUESTION # 30

.....

Are you still satisfied with your present job? Do you still have the ability to deal with your job well? Do you think whether you have the competitive advantage when you are compared with people working in the same field? If your answer is no, you are a right place now. Because our FCP\_FMNG\_AD-7.4 Exam Torrent will be your good partner and you will have the chance to change your work which you are not satisfied with, and can enhance your ability by our FCP\_FMNG\_AD-7.4 guide questions, you will pass the exam and achieve your target.
