Highlight a person's learning effect is not enough, because it is difficult to grasp the difficulty of testing, a person cannot be effective information feedback, in order to solve this problem, our NGFW-Engineer study materials provide a powerful platform for users, allow users to exchange of experience. Here, the all users of our NGFW-Engineer Study Materials can through own id to login to the platform, realize the exchange and sharing with other users, even on the platform and more users to become good friends, encourage each other, to deal with the difficulties encountered in the process of preparation each other.

## Palo Alto Networks NGFW-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Integration and Automation: This section measures the skills of Automation Engineers in deploying and managing Palo Alto Networks NGFWs across various environments. It includes the installation of PA-Series, VM-Series, CN-Series, and Cloud NGFWs. The use of APIs for automation, integration with third-party services like Kubernetes and Terraform, centralized management with Panorama templates and device groups, as well as building custom dashboards and reports in Application Command Center (ACC) are key topics.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>• <b>PAN-OS Device Setting Configuration:</b> This section evaluates the expertise of System Administrators in configuring device settings on PAN-OS. It includes implementing authentication roles and profiles, and configuring virtual systems with interfaces, zones, routers, and inter-VSYS security. Logging mechanisms such as Strata Logging Service and log forwarding are covered alongside software updates and certificate management for PKI integration and decryption. The section also focuses on configuring Cloud Identity Engine User-ID features and web proxy settings.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>PAN-OS Networking Configuration:</b> This section of the exam measures the skills of Network Engineers in configuring networking components within PAN-OS. It covers interface setup across Layer 2, Layer 3, virtual wire, tunnel interfaces, and aggregate Ethernet configurations. Additionally, it includes zone creation, high availability configurations (active</li> <li>• active and active</li> <li>• passive), routing protocols, and GlobalProtect setup for portals, gateways, authentication, and tunneling. The section also addresses IPSec, quantum-resistant cryptography, and GRE tunnels.</li> </ul>

## Three Formats of Real4test Palo Alto Networks NGFW-Engineer Practice Questions

In order to make sure your whole experience of buying our NGFW-Engineer study materials more comfortable, our company will provide all people with 24 hours online service. The experts and professors from our company designed the online service system for all customers. If you decide to buy the NGFW-Engineer Study Materials from our company, we can make sure that you will have the opportunity to enjoy the best online service provided by our excellent online workers.

## Palo Alto Networks Next-Generation Firewall Engineer Sample Questions (Q25-Q30):

### NEW QUESTION # 25

In an authentication sequence, what happens if the "Continue on client cert failure" option is enabled?

- A. The firewall will prompt the user to provide a valid client certificate.
- **B. The firewall will skip client certificate authentication and proceed to the next authentication profile in the sequence.**
- C. The firewall will log the failure and terminate the session.
- D. The firewall will deny access if the client certificate is invalid.

**Answer: B**

### NEW QUESTION # 26

What must be configured before a firewall administrator can define policy rules based on users and groups?

- A. User Mapping profile
- B. Authentication profile
- C. LDAP Server profile
- **D. Group mapping settings**

**Answer: D**

Explanation:

Before a firewall administrator can define policy rules based on users and groups, the Group Mapping settings must be configured. These settings enable the firewall to map users to their respective Active Directory (AD) groups. This mapping allows the firewall to use user and group information to create policy rules based on group membership.

### NEW QUESTION # 27

Which two statements apply to configuring required security rules when setting up an IPSec tunnel between a Palo Alto Networks firewall and a third- party gateway? (Choose two.)

- A. For incoming and outgoing traffic through the tunnel, creating separate rules for each direction is optional.
- **B. For incoming and outgoing traffic through the tunnel, separate rules must be created for each direction.**
- C. The IKE negotiation and IPSec/ESP packets are allowed by default via the intrazone default allow policy.
- **D. The IKE negotiation and IPSec/ESP packets are denied by default via the interzone default deny policy.**

**Answer: B,D**

Explanation:

Separate rules must be created for each direction: Palo Alto Networks firewalls enforce security policies based on traffic direction. To allow bidirectional communication through the IPSec tunnel, two separate rules are required - one for incoming and one for outgoing traffic.

IKE negotiation and IPSec/ESP packets are denied by default: Palo Alto Networks firewalls use an interzone default deny policy, meaning that unless an explicit policy allows IKE (UDP 500/4500) and ESP (protocol 50) traffic, the firewall will block these packets, preventing tunnel establishment. Therefore, administrators must create explicit rules permitting IKE and IPSec/ESP traffic to the firewall's external interface.

#### NEW QUESTION # 28

How does a Palo Alto firewall handle traffic between two different security zones?

- A. Traffic is allowed automatically between zones
- B. Traffic between zones is forwarded without inspection
- C. Traffic is automatically encrypted between zones
- **D. Traffic is denied by default unless a security policy explicitly allows it**

**Answer: D**

#### NEW QUESTION # 29

Which forwarding methods can be used on the Objects tab when configuring the Log Forwarding profile?

- **A. Panorama, syslog, email**
- B. SNMP, HTTP, RADIUS
- C. Panorama, ADEM, syslog
- D. Syslog, HTTP, NetFlow

**Answer: A**

Explanation:

When configuring the Log Forwarding profile on a Palo Alto Networks firewall, the forwarding methods available include:

Panorama: For forwarding logs to a Panorama management system

Syslog: For forwarding logs to a syslog server.

Email: For sending logs via email.

#### NEW QUESTION # 30

.....

As old saying goes, knowledge is wealth. So our NGFW-Engineer exam questions will truly teach you a lot of useful knowledge, which can compensate for your shortcomings. Actions speak louder than words. You are supposed to learn to make a rational plan of life. Our NGFW-Engineer Real Exam will accompany you to grow stronger. And the more you know, the more easily you can cope with the difficulties in your work. And the most important is that you can get the NGFW-Engineer certification.
