building custom applications on the Salesforce platform. Salesforce Certified Platform App Builder certification demonstrates an individual's ability to design, build, and implement custom applications using the Salesforce platform.

Salesforce Certified Platform App Builder Sample Questions (Q37-Q42):

NEW QUESTION # 37

The app builder at Cloud Kicks has created a custom object named Delivery__c to track the details of products shipped to customers.

Which two actions should the app builder take to prevent users in the shipping department from deleting delivery records?

Choose 2 answers

- A. Remove the delete button from the Delivery page layout.
- B. Change the organization-wide default of deliveries to Private.
- C. Use a permission set to remove the Delete permission.
- D. Remove the Delete permission from the Shipper profile.

Answer: C,D

Explanation:

Removing the Delete permission from the Shipper profile and using a permission set to remove the Delete permission are both valid ways to prevent users from deleting delivery records. Removing the delete button from the Delivery page layout will not prevent users from deleting records using other methods, such as list views or reports. Changing the organization-wide default of deliveries to Private will not affect the delete permission, but only the sharing settings.

NEW QUESTION # 38

The organization wide defaults for a custom object is set to private. The Supervisor profile grants view access to the same object. A user with the Supervisor profile is also listed as the Manager on the user detail records for access. However, the supervisor still cannot view records owned by the subordinate. What is preventing the Supervisor from viewing records owned by the subordinate?

Choose 2 answers

- A. Organization wide settings for the custom object grant access to other users with the same role
- B. Organization wide settings for the custom object do not grant access using hierarchy
- C. The Supervisor requires a permission set in order to view the subordinate's record
- D. The Supervisor's role is not above the subordinate's role in hierarchy

Answer: B,D

NEW QUESTION # 39

When a sales rep submits an account for approval, Universal Containers wants the user to answer additional questions via a popup window to populate additional record fields.

What should an app builder use to achieve the desired result?

- A. Custom button and Flow
- B. Process Builder and Flow
- C. Lightning component and Process Builder
- D. Custom picklist field and Process Builder

Answer: A

Explanation:

The app builder should use a custom button and Flow to achieve the desired result. A custom button is a button that can invoke custom logic or actions when clicked by a user. A Flow is a type of automation tool that can guide users through a series of screens and perform actions based on user input. In this case, the app builder can create a custom button on the Account object that launches a Flow when clicked by a user. The Flow can display a popup window with questions for the user to answer and populate additional fields on the Account record based on the user input. Option A, B, and C are not tools that can achieve this result.

NEW QUESTION # 40

Cloud Kicks works on an annual subscription model. When a sales rep marks an opportunity as closed won, a new opportunity should automatically be created for the renewal. The contracts team works outside of Salesforce but also needs to be notified about closed deals in order to initiate the contract process with the customer.

Which automation solution would meet these requirements?

- **A. Process Builder**
- B. Validation Rule
- C. Approval Process
- D. Workflow Rule

Answer: A

Explanation:

The automation solution that would meet these requirements is Process Builder. Process Builder is a tool that can create and update records, send email alerts, submit records for approval, invoke flows, call Apex classes, and post to Chatter based on certain criteria and actions. The app builder can use Process Builder to create a process that starts when an opportunity is marked as closed won, creates a new opportunity record for the renewal with pre-populated fields, and sends an email alert to the contracts team. Option A is incorrect because an approval process is not suitable for this requirement, as approval processes are used to define the steps and criteria for approving records. Option B is incorrect because a validation rule is not suitable for this requirement, as validation rules are used to enforce data quality and prevent users from saving invalid records. Option D is incorrect because a workflow rule is not suitable for this requirement, as workflow rules are considered legacy tools and have limitations compared to Process Builder.

NEW QUESTION # 41

At Universal Containers, the Account object has a Master-Detail relationship with an Invoice custom object. The App Builder would like to change to a lookup field, but is not able to do so. What could be causing this?

- **A. The Account record includes Invoice roll-up summary fields.**
- B. The Account is included in the workflow on the Invoice object.
- C. The invoice must have at least one Master-Detail field for reporting.
- D. The Invoice records have existing values in the Account.

Answer: A

Explanation:

The Account record includes Invoice roll-up summary fields. This is correct because roll-up summary fields are only available on the master object in a master-detail relationship, and changing the field type to lookup would delete the roll-up summary fields

NEW QUESTION # 42
