Free PDF Fantastic Juniper - Frequent JN0-336 Updates

DOWNLOAD the newest Itbraindumps JN0-336 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1dLYJs9bg7DL5I8uOoBWwA3wlS6KT5iZg

If you want to choose passing Juniper certification JN0-336 exam to make yourself have a more stable position in today's competitive IT area and the professional ability become more powerful, you must have a strong expertise. And passing Juniper certification JN0-336 exam is not very simple. Perhaps passing Juniper Certification JN0-336 Exam is a stepping stone to promote yourself in the IT area, but it doesn't need to spend a lot of time and effort to review the relevant knowledge, you can choose to use our Itbraindumps product, a training tool prepared for the IT certification exams.

Perhaps you have had such an unpleasant experience about what you brought in the internet was not suitable for you in actual use, to avoid this, our company has prepared JN0-336 free demo in this website for our customers, with which you can have your first-hand experience before making your final decision. The content of the free demo is part of the content in our real JN0-336 Study Guide. As long as you click on it, then you can download it. We believe you can have a good experience with our demos of the JN0-336 learning guide.

Juniper JN0-336 Practice Test - Quick Tips To Pass (2026)

For the challenging Security, Specialist (JNCIS-SEC) (JN0-336) exam, they make an effort to locate reputable and recent Treasury with Security, Specialist (JNCIS-SEC) (JN0-336) practice questions. The high anxiety and demanding workload the candidate must face being qualified for the Treasury with Security, Specialist (JNCIS-SEC) (JN0-336) certification are more difficult than only passing the Security, Specialist (JNCIS-SEC) (JN0-336) exam.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q71-Q76):

NEW QUESTION # 71
Your company is using the Juniper ATP Cloud free model. The current inspection profile is set at 10 MB You are asked to configure ATP Cloud so that executable files up to 30 MB can be scanned while at the same time minimizing the change in scan time for other file types.
Which configuration should you use in this scenario?

- A. Use the CLI to change the default profile to increase the scan limit for all files to 30 MB.
- B. Use the ATP Cloud Ul to change the default profile to increase the scan limit for all files to 30 MB.
- C. Use the ATP Cloud Ul to update a custom profile and increase the scan limit for executable files to 30 MB.
- D. Use the CLI to create a custom profile and increase the scan limit.

Answer: C

Explanation:
In this scenario, you should use the ATP Cloud Ul to create a custom profile and update the scan limit for executable files to 30 MB. This will ensure that executable files up to 30 MB can be scanned, while at the same time minimizing the change in scan time for other file types. To do this, log in to the ATP Cloud Ul and go to the Profiles tab. Click the Create button to create a new profile, and then adjust the scan limits for executable files to 30 MB. Once you have saved the custom profile, you can apply it to the desired systems and the new scan limit will be in effect.

NEW QUESTION # 72
You want to be alerted if the wrong password is used more than three times on a single device within five minutes.
Which Juniper Networks solution will accomplish this task?

- A. Juniper Identity Management Service
- B. Intrusion Prevention System
- C. Juniper Secure Analytics
- D. Adaptive Threat Profiling

Answer: C

Explanation:
The Juniper Networks solution that will accomplish the task of alerting if the wrong password is used more than three times on a single device within five minutes is Juniper Secure Analytics (JSA). JSA is a security intelligence platform that collects, analyzes, and correlates network data from various sources, such as firewalls, routers, switches, servers, and applications. JSA can detect and respond to threats, anomalies, and vulnerabilities in real time using rules, offenses, reports, and dashboards. JSA can also integrate with JIMS (Juniper Identity Management Service) to obtain user identity information from Active Directory domains or syslog sources. JSA can use this information to create custom rules that trigger offenses or alerts based on user behavior or activity, such as failed login attempts or password changes.
Reference: = Juniper Secure Analytics Troubleshooting Guide, Juniper Identity Management Service User Guide

NEW QUESTION # 73
You are troubleshooting unexpected issues on your JIMS server due to out of order event log timestamps.
Which action should you take to solve this issue?

- A. Enable time synchronization on the SRX Series devices.
- B. Enable time synchronization on the client devices.
- C. Enable time synchronization on the domain controllers.
- D. Enable time synchronization on the JIMS server.

Answer: C

Explanation:
To solve the issue of out of order event log timestamps on your JIMS server, you should enable time synchronization on the domain controllers. JIMS (Juniper Identity Management Service) is a Windows service that collects user, device, and group information from Active Directory domains or syslog sources and provides it to SRX Series devices and CSO for identity-based security policies. JIMS relies on the timestamps of the event logs generated by the domain controllers to track user logins, logouts, and IP address changes. If the domain controllers have different or inaccurate clocks, the event logs may have out of order or incorrect timestamps, which can cause JIMS to miss or misinterpret some events and affect its accuracy and performance. Therefore, you should ensure that all the domain controllers in your network are synchronized with a reliable time source, such as an NTP server or a Windows Time service. Reference: = Juniper Identity Management Service User Guide, Juniper Identity Management Service Feature Guide, Configure JIMS Collector to Get Microsoft Event Logs, Considerations for timestamps in centralized logging platforms

NEW QUESTION # 74
Exhibit

```
user@srx> show security policies
Default policy: deny-all
Default policy log Profile ID: 0
Pre ID default policy: permit-all
From zone: Trust, To zone: Untrust
  Policy: BlockUbuntu, State: enabled, Index: 4, Scope Policy: 0, Sequence
number: 1, Log Profile ID: 0
    Source vrf group: any
    Destination vrf group: any
    Source addresses: any
    Destination addresses: any
    Applications: junos-defaults
    Dynamic Applications: junos:UBUNTU
    Source identity feeds: any
    Destination identity feeds: any
    Action: deny
  Policy: AllowWeb, State: enabled, Index: 9, Scope Policy: 0, Sequence
number: 2, Log Profile ID: 0
    Source vrf group: any
    Destination vrf group: any
    Source addresses: any
    Destination addresses: any
    Applications: junos-http, junos-https, junos-dns-udp
    Source identity feeds: any
    Destination identity feeds: any
    Action: permit
user@srx>
```

You are asked to ensure that servers running the Ubuntu OS will not be able to update automatically by blocking their access at the SRX firewall. You have configured a unified security policy named Blockuburrtu, but it is not blocking the updates to the OS.
Referring to the exhibit which statement will block the Ubuntu OS updates?

- A. Move the Blockubuntu policy after the Allowweb policy.
- B. Configure the Blockubuntu policy with the junos-https application parameter.
- C. Configure the Allowweb policy to have a dynamic application of any.
- D. Change the default policy to permit-all.

Answer: B

NEW QUESTION # 75
Which two features are configurable on Juniper Secure Analytics (JSA) to ensure that alerts are triggered when matching certain criteria? (Choose two.)

- A. assets
- B. building blocks
- C. tests
- D. events

Answer: B,C

Explanation:
Building blocks in JSA are reusable components that define specific attributes or behaviors in the network traffic. They can be used to create complex criteria for alerts. By combining multiple building blocks, you can specify detailed conditions under which alerts should be triggered, such as combinations of events or specific sequences of actions within the network.
Tests in JSA are conditions or rules that analyze log or flow data to detect unusual or malicious activity.
You can configure tests to evaluate the data against predefined criteria, which, when met, will trigger alerts. These tests are essential for identifying potential security incidents and ensuring that relevant alerts are issued in a timely manner.
