## Medical Technology AMCA Phlebotomy Technician Certification Exam Sample Questions (Q273-Q278):

### NEW QUESTION # 273

When decanting a 24-hour urine specimen, which may splash, into a sink to a sanitary sewer, the phlebotomist should:

- A. Run water while decanting.
- **B. Wear facial protection and a fluid-proof apron.**
- C. Pour from a height of at least 6 inches.
- D. Stand as far away from the sink as possible.

**Answer: B**

Explanation:

When decanting a 24-hour urine specimen, which may splash, into a sink to a sanitary sewer, the phlebotomist should wear facial protection and a fluid-proof apron in addition to the standard PPE (gloves, lab coat). The phlebotomist should stand close to the sink and pour close to the drain opening. Water should not be running while decanting because this increases the risk of splashing but copious amounts of water should be run after the decanting is completed.

### NEW QUESTION # 274

Which class of fire can be put out with water?

- **A. Class A**
- B. Class D
- C. Class K
- D. Class C

**Answer: A**

Explanation:

Class A fires involve wood, paper clothing or other combustibles. This is the only class of fire that can be put out with water, other fires may become more dangerous if water is added. Class D fires involve combustible or reactive metals such as sodium, potassium, magnesium, or lithium. Class C fires involve electrical equipment. Class B fires involve flammable liquids or gases such as paint or propane. Fire extinguishers are available for all classes of fires, but should only be used by trained individuals who are sure that the extinguisher type is correct for the type of fire. Large fires and fires involving multiple classes of fire must be handled by trained firefighting personnel.

### NEW QUESTION # 275

Which of the following tests requires a timed specimen?

- **A. Cortisol**
- B. Blood culture
- C. CBC
- D. Uric acid

**Answer: A**

Explanation:

The cortisol test requires a timed specimen. Because cortisol levels vary during the day, the blood for the test is usually drawn first thing in the morning. In some cases, patients are administered 1 mg of dexamethasone the night before the test. Patients are typically asked to avoid strenuous exercise for 24 hours before the test and some medications that can affect the test results, including anticonvulsants, estrogens, synthetic steroids, and androgens, may be held.

### NEW QUESTION # 276

Transfer of an infectious agent via droplets larger than 5 µm in diameter is known as:

- A. Airborne transmission
- B. Vehicle transmission
- **C. Droplet transmission**
- D. Vector transmission

**Answer: C**

Explanation:

Droplet transmission involves transfer of an infectious agent via droplets larger than 5 µm in diameter, whereas airborne transmission involves dispersal of infectious evaporated droplet nuclei less than 5 µm in diameter. In vector transmission, infectious agents are carried by insects, arthropods, or animals. In vehicle transmission, infectious agents are transmitted through contaminated food, water, or drugs.

#### **NEW QUESTION # 277**

When collecting a capillary blood specimen for bilirubin from a newborn receiving phototherapy for jaundice, it is especially important to:

- **A. Turn off the phototherapy light during collection.**
- B. Work as quickly as possible.
- C. Avoid blocking the phototherapy lights.
- D. Collect the specimen in a clear container.

**Answer: A**

Explanation:

When collecting a capillary blood specimen for bilirubin from a newborn receiving phototherapy for jaundice, it is especially important to turn off the phototherapy light during collection because exposure of the blood sample to the light may break down the bilirubin. The specimen must be obtained carefully to prevent hemolysis and placed in an amber microcollection container, or the container should be covered with aluminum foil to protect the contents from light. The blood specimen should be collected as soon after the request as possible because accurate timing can help to determine the rate of bilirubin increase.

#### **NEW QUESTION # 278**
