EAEP2201 valid exam practice material & Esri EAEP2201 valid dumps

It is quite clear that most candidates are at their first try, therefore, in order to let you have a general idea about our EAEP2201 test engine, we have prepared the free demo in our website. The contents in our free demo are part of the real materials in our EAEP2201 study engine. Just like the old saying goes "True blue will never strain" You are really welcomed to download the free demo in our website to have the firsthand experience, and then you will find out the unique charm of our EAEP2201 Actual Exam by yourself.

Esri Enterprise Administration Professional 2201 Sample Questions (Q17-

Q22):

NEW QUESTION # 17

A GIS administrator team must perform system maintenance over the weekend. The team must ensure that members do not add, publish, or edit any items in ArcGIS Enterprise. Members still need the ability to access and view items as necessary.
Which action should the team perform?

- A. Disable ArcGIS Web Adaptor
- B. Clone the organization's content to a standby deployment
- C. Place ArcGIS Enterprise in read-only mode
- D. Change members' user role to Viewer

Answer: C

Explanation:
The correct solution is to place ArcGIS Enterprise in read-only mode. This is an administrative function designed specifically to prevent changes to content or configuration while still allowing users to view and access existing items.
From the official ArcGIS Enterprise documentation:
"Read-only mode allows an administrator to restrict changes to the portal. When enabled, no users (including administrators) can create, update, or delete items, groups, or users. However, users can still search for and view items, access content, and use apps and services." This feature is typically used during maintenance windows or before performing disaster recovery tasks to preserve system state.
* Option B is incorrect because changing user roles to Viewer would not prevent content changes by administrators or other roles with publishing privileges.
* Option C refers to cloning, which is not a preventive or temporary access control measure, but rather a method for standby deployments or replication.
* Option D (disabling the Web Adaptor) would disrupt access entirely, which does not match the requirement to allow viewing.

NEW QUESTION # 18

A GIS administrator needs to change the ownership of a shared update group to a different user. The administrator receives an error message: "Unable to reassign the group at this time." What is causing this error?

- A. The user does not have the correct privileges
- B. The sharing settings on the group are configured incorrectly
- C. It is not possible to reassign ownership of shared update groups

Answer: A

Explanation:
The error message "Unable to reassign the group at this time" typically occurs when attempting to transfer ownership of a shared update group to a user who lacks the necessary privileges. Specifically, the new owner must have the privilege to create and own groups. If the user's role does not include this privilege, the ownership transfer will fail. To resolve this, ensure that the user has a role (either default or custom) that includes the privilege to create groups.

NEW QUESTION # 19

A GIS administrator must restore an ArcGIS Enterprise deployment from a backup file previously created by the webgisdr utility.
Which utility should the administrator run first?

- A. webgisdr
- B. restore
- C. restoredatastore

Answer: A

Explanation:
The webgisdr utility is the official tool used to both back up and restore ArcGIS Enterprise deployments.
When restoring a backup, this tool ensures all components-Portal for ArcGIS, ArcGIS Server (federated), ArcGIS Data Store, and associated configurations-are restored in the correct sequence and with integrity.

The utility reads from a configuration file that defines the backup location, type, and parameters.webgisdr orchestrates the entire restoration process automatically. Runningrestoredatastore(Option B) individually is not required and may only restore part of the deployment, such as the relational store.Restore(Option C) is not a valid utility for ArcGIS Enterprise.
Reference Source:ArcGIS Enterprise documentation - Web GIS Disaster Recovery tool (webgisdr)

NEW QUESTION # 20
An ArcGIS Enterprise deployment is completely internal and does not have access to the internet. How should the organization find patches and updates for the deployment components?

- A. Open the Check For Updates option on the machine where ArcGIS Server is installed
- B. Refer to the Patches and Service Pack page on the Esri Support website
- C. Run the patch notification bat utility from the command line

Answer: C

Explanation:
For environments without internet access, the organization can use thepatchnotification.batutility to check for available patches and updates. This utility can be run from the command line and provides information about the current patch status of the ArcGIS Enterprise components. Administrators can then manually download the necessary patches from another machine with internet access and transfer them to the internal environment for installation.

NEW QUESTION # 21
Portal for ArcGIS is running in aWindows environment.
Which type of account is recommended to run the Portal for ArcGIS service?

- A. Group-managed service account
- B. Local machine administrator account
- C. Built-in system account
- D. Windows Active Directory domain account

Answer: A

Explanation:
Esri recommends using aGroup Managed Service Account (gMSA)to run Portal for ArcGIS services in Windows environments. gMSAsautomatically manage passwords, align withActive Directory policies, and areideal for enterprise-scale deployments.
From Esri documentation:
"Using a group managed service account (gMSA) to run Portal for ArcGIS services improves security by allowing Windows to manage the password, reducing administrative overhead while meeting enterprise security requirements."
* OptionB(regular AD account) is acceptable butrequires manual password updates.
* OptionCandDare not secure or scalable for enterprise environments.
