New DS0-001 Dumps Files, Valid DS0-001 Exam Questions

DOWNLOAD the newest RealValidExam DS0-001 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=145IWsxyq1B3s9GNG7fGvyfbbXqmiD4Xb

You can customize the time and CompTIA DS0-001 questions of our CompTIA DataSys+ Certification Exam (DS0-001) practice exams according to your needs. Real CompTIA DS0-001 exam environment which our web-based and desktop DS0-001 Practice Exams create is beneficial to get accustomed to the real DS0-001 exam pattern.

CompTIA DS0-001 Exam Syllabus Topics:

Topic	Details
Topic 1	• Database Deployment: In this topic, you'll find discussions on database planning and design aspects. It also focuses on the implementation, testing, and deployment phases of databases.
Topic 2	• Database Management and Maintenance: Here, you'll learn about monitoring and reporting for database management and performance, common database maintenance processes, documentation production, and relevant tools usage. Lastly, the topic focuses on implementing data management tasks.
Topic 3	• Data and Database Security: This topic focuses on data security concepts, governance and regulatory compliance purposes, implementing authentication and authorization policies and best practices. Additionally, the topic discusses database infrastructure security, and understanding types of attacks and their effects on data systems.

Topic 4	• Business Continuity: Finally, this topic covers the importance of disaster recovery techniques. Moreover, the topic explains backup and restore best practices and processes.
Topic 5	• Database Fundamentals: This topic covers database structure types, SQL code development and modification based on scenarios, comparison of scripting methods and environments, and the impact of programming on database operations.

Valid DS0-001 Exam Questions - DS0-001 Valid Exam Pdf

Thousands of CompTIA DataSys+ Certification Exam (DS0-001) exam applicants are satisfied with our DS0-001 practice test material because it is according to the latest CompTIA DataSys+ Certification Exam (DS0-001) exam syllabus and we also offer up to 1 year of free CompTIA Dumps updates. Visitors of RealValidExam can check the DS0-001 product by trying a free demo. Buy the DS0-001 test preparation material now and start your journey towards success in the DS0-001 examination.

CompTIA DataSys+ Certification Exam Sample Questions (Q18-Q23):

NEW QUESTION # 18
Which of the following constraints is used to enforce referential integrity?

- A. Foreign key
- B. Unique key
- C. Primary key
- D. Surrogate key

Answer: A

Explanation:
The constraint that is used to enforce referential integrity is foreign key. A foreign key is a column or a set of columns in a table that references the primary key of another table. A primary key is a column or a set of columns in a table that uniquely identifies each row in the table. Referential integrity is a rule that ensures that the values in the foreign key column match the values in the primary key column of the referenced table.
Referential integrity helps maintain the consistency and accuracy of the data across related tables. The other options are either different types of constraints or not related to referential integrity at all. For example, a surrogate key is a column that is artificially generated to serve as a primary key, such as an auto-increment number or a GUID (Globally Unique Identifier); a unique key is a column or a set of columns in a table that uniquely identifies each row in the table, but it can have null values unlike a primary key; there is no such constraint as TID. References: CompTIA DataSys+ Course Outline, Domain 1.0 Database Fundamentals, Objective 1.2 Given a scenario, execute database tasks using scripting and programming languages.

NEW QUESTION # 19
Which of the following is an advantage of creating indexes?

- A. To reduce memory
- B. To update the query plan
- C. To help with space allocation
- D. To provide quick and efficient access to data

Answer: D

Explanation:
The advantage of creating indexes is to provide quick and efficient access to data. An index is a data structure that stores the values of one or more columns of a table in a sorted order, along with pointers to the corresponding rows in the table. An index helps to speed up queries that search, filter, sort, or join data based on the indexed columns, as it reduces the number of disk accesses or scans required to locate the desired data. An index also helps to enforce uniqueness or referential integrity constraints on the indexed columns. The other options are either not true or not relevant for this purpose. For example, an index does not help with space

allocation, as it consumes additional space in the database; an index does not reduce memory, as it may use memory for caching or buffering purposes; an index does not update the query plan, as it is an input or a factor for the query optimizer to generate the query plan.

NEW QUESTION # 20

A database administrator has been asked to assign a user the ability to view a data set. Which of the following practices best describes this request?

- A. Password policy implementation
- B. Database audit
- C. Access control
- D. Security audit

Answer: C

Explanation:

The practice that best describes this request is access control. Access control is a process that regulates who can access what data in a system based on predefined rules or policies. Access control helps protect data from unauthorized or inappropriate access or modification by granting or denying permissions or privileges to users or groups based on their roles or identities. By applying access control, the database administrator can assign a user the ability to view a data set without allowing them to change or delete it. The other options are either different practices or not related to this request. For example, security audit is a process that evaluates the security level of a system by identifying vulnerabilities or risks; database audit is a process that monitors and records the activities or events that occur on a database; password policy implementation is a process that defines and enforces rules or standards for creating and managing passwords.

NEW QUESTION # 21

A database administrator needs to aggregate data from multiple tables in a way that does not impact the original tables, and then provide this information to a department. Which of the following is the best way for the administrator to accomplish this task?

- A. Create a materialized view.
- B. Create a function.
- C. Create indexes on those tables
- D. Create a new database.

Answer: A

Explanation:

The best way for the administrator to accomplish this task is to create a materialized view. A materialized view is a type of view that stores the result of a query on one or more tables as a separate table in the database. A materialized view can aggregate data from multiple tables in a way that does not impact the original tables, and then provide this information to a department as a single source of truth. A materialized view also improves query performance and efficiency by reducing the need to recompute complex queries every time they are executed. The other options are either not suitable or not optimal for this task. For example, creating indexes on those tables may improve query performance on individual tables, but not on aggregated data; creating a new database may require additional resources and maintenance, and may introduce inconsistency or redundancy; creating a function may require additional coding and execution, and may not store the result as a separate table. Reference: CompTIA DataSys+ Course Outline, Domain 2.0 Database Deployment, Objective 2.2 Given a scenario, create database objects using scripting and programming languages.

NEW QUESTION # 22

A database administrator executed multiple transactions and needs to finish the operations.
Which of the following functions should the administrator use?

- A. Commit
- B. Return
- C. Save
- D. Rollback

Answer: A

Explanation:
The Commit function finalizes all changes made during the transactions, making them permanent in the database.

NEW QUESTION # 23
......

Once you have decided to purchase our DS0-001 study materials, you can add it to your cart. Then just click to buy and pay for the certain money. When the interface displays that you have successfully paid for our DS0-001 study materials, our specific online sales workers will soon deal with your orders. You will receive the DS0-001 study materials no later than ten minutes. You need to ensure that you have written down the correct email address. Please check it carefully. If you need the invoice, please contact our online workers. They will send you an electronic invoice, which is convenient. You can download the electronic invoice of the DS0-001 Study Materials and reserve it.
