Our effort in building the content of our Platform-App-Builder Study Materials lead to the development of learning guide and strengthen their perfection. You may find that there are always the latest information in our Platform-App-Builder practice engine and the content is very accurate.

## Salesforce Certified Platform App Builder Sample Questions (Q241-Q246):

### NEW QUESTION # 241

An Alexa Skill Builder published a skill that streams sounds to help users relax. The skill is becoming very popular and is available in many different locales around the world. More than 20,000 users are using the skill every week, and more than 500 users are added daily. The sound files are stored in Amazon S3.

What can the Builder do to ensure low latency and the best possible streaming performance?

- A. Use Amazon CloudFront to deliver content and cache the audio files across different geographical regions.
- B. Migrate the sound files from Amazon S3 into Amazon Redshift to speed up the read operations.
- C. Enable cross-region replication on the Amazon S3 bucket policy to improve the skill's performance.
- D. Use Elastic Load Balancing to handle the traffic generated by the increasing number of users.

**Answer: C**

**Explanation:**

#### NEW QUESTION # 242

Universal Containers has a private sharing model for Accounts and Opportunities and uses Territory Management to grant access to records.

- \* Sales rep A manually shares an opportunity record with sales rep B.
- \* Sales rep B has access to the Account even though the Account Is NOT In sales rep B's territory.
- \* Sales rep C CANNOT see either record.

Based on the information given, why can sales rep B see the Account related to the Opportunity?

- A. Account was also manually shared.
- **B. Sales rep B has implicit access to the Account.**
- C. Sales rep B was added to the Account team.
- D. Sharing set is granting access to the Account.

**Answer: B**

Explanation:

Sales rep B has implicit access to the Account because of the manual sharing of the Opportunity. Implicit sharing grants access to parent records when a user has access to a child record. Sales rep B was not added to the Account team, sharing set is not applicable for private sharing model, and Account was not manually shared.

#### NEW QUESTION # 243

Cloud Kicks (CK) captures all shipping information in a custom object called Shipments\_\_c. CK's app builder is tasked with creating an approval process to ensure department members can approve all overnight shipments.

Where should the app builder route the approval request?

- A. Hierarchy field
- B. Role
- C. Queue
- **D. Public group**

**Answer: D**

Explanation:

Explanation

Public group is the best option to route the approval request for overnight shipments. Public groups can include users, roles, or other groups. Queues are used to assign ownership of records to a group of users, not for approval processes. Hierarchy field and role are not flexible enough to include only the department members.

#### NEW QUESTION # 244

What option is available to an App Builder when defining an object-specific Create Record custom action?

Choose 2 answers

- **A. Pre-Defining field values on the target object.**
- B. Allowing the end user to choose the record type
- C. Redirecting the end user to the detail page of the target object
- **D. Specifying the fields and layout of the action.**

**Answer: A,D**

Explanation:

The app builder has two options available when defining an object-specific Create Record custom action:

- \* Pre-Defining field values on the target object. This means that the app builder can specify default values for certain fields on the target object when creating a new record using the custom action.
- \* Specifying the fields and layout of the action. This means that the app builder can choose which fields to include in the action and how they are arranged on the screen. Option B and D are not options available when defining an object-specific Create Record custom action.

### NEW QUESTION # 245

DreamMouse Realty has a mentorship program that pairs experienced Realtors with new Realtors. Each experienced Realtor can mentor one or several new Realtors, and each new Realtor is required to work with a single experienced Realtor they report to for a probationary period.

What type of relationship would an app builder set up to meet this specification?

- A. Indirect lookup
- B. Many-to-many
- **C. Lookup**
- D. Master-detail

**Answer: C**

Explanation:

Lookup is the type of relationship that would be set up to meet the specification of pairing experienced Realtors with new Realtors. According to the Salesforce documentation, "A lookup relationship creates a loose association between objects. The lookup field allows users to select a record from another object." Indirect lookup is used for junction objects on different platforms. Many-to-many is not a type of relationship, but a result of using junction objects. Master-detail is used for creating parent-child relationships.

### NEW QUESTION # 246

.....

In this website, you can find three different versions of our Platform-App-Builder guide torrent which are prepared in order to cater to the different tastes of different people from different countries in the world since we are selling our Platform-App-Builder test torrent in the international market. Most notably, the simulation test is available in our software version.
