And not only you can enjoy the service before you pay for our Plat-Admn-202 learning guide, you can also have the right to have free updates for one year after your purchase.

Salesforce Plat-Admn-202 Exam Syllabus Topics:

Topic	Details
Topic 1	• Business Logic and Process Automation: This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.
Topic 2	• Salesforce Fundamentals: This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.

Topic 3	• Data Modeling and Management: This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.
Topic 4	• App Deployment: This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.
Topic 5	• User Interface: This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.

Help You Learn Steps Necessary To Pass The Plat-Admn-202 Exam Reliable Test Sims

Under the dominance of knowledge-based economy, we should keep pace with the changeable world and renew our knowledge in pursuit of a decent job and higher standard of life. In this circumstance, possessing a Plat-Admn-202 certification in your pocket can totally increase your competitive advantage in the labor market and make yourself distinguished from other job-seekers. Therefore our Plat-Admn-202 Study Guide can help you with dedication to realize your dream. And only after studying with our Plat-Admn-202 exam questions for 20 to 30 hours, you will be able to pass the Plat-Admn-202 exam.

Salesforce Certified Platform App Builder Sample Questions (Q34-Q39):

NEW QUESTION # 34
The app builder at AW Computing has been asked to track the number of times a case has been reopened.
Which solution should the app builder utilize to help with this request?

- A. Screw flow
- B. Scheduled Triggered flow
- C. Process Builder
- D. Apex Trigger

Answer: B

Explanation:
Reference:
Salesforce Help - Scheduled Flows

NEW QUESTION # 35
An app builder installs an unmanaged package in a full copy sandbox that is an exact match for production, and now they are ready to install it m production. When the app builder attempts to install the package in production, it fails.
Why did the package fail to install?

- A. Apex unit test failures

- B. Incorrect license types
- C. Object limits exceeded
- D. Package features not compatible

Answer: A

Explanation:
Apex unit test failures can cause a package installation to fail. According to the Salesforce documentation, "If your package contains Apex code, all tests must complete successfully for your package to install." Incorrect license types, package features not compatible, and object limits exceeded are not valid reasons for a package installation failure.

NEW QUESTION # 36
The app builder at Ursa Major Solar has just created a master-detail relationship between a parent object Galaxy__c and child object Star__c.
What would be the effect of creating this type of relationship if users want to report on Galaxy__c with Star__c?

- A. A new custom report type will need to be created for Galaxy__c with Star__c.
- B. A Star__c report type with Galaxy__c as a field will be automatically created.
- C. A Galaxy__c with Star__c report type will be automatically created.
- D. A new custom report type will need to be created for Star__c with lookup fields from Galaxy__c.

Answer: C

Explanation:
A master-detail relationship between two objects automatically creates a report type that includes both objects. The app builder does not need to create a custom report type for this scenario. The report type will have the format of Parent object with Child object

NEW QUESTION # 37
Cloud Kicks (CK) wants to set up a custom child object to track gift cards issued to a customer. A key requirement is to track the total number of gift cards opened and gift cards issued on an Account. CK wants to permanently ensure the gift cards are unable to be moved across any other Account once it is created.
On the gift card object, what type of field should be created to support this requirement?

- A. Lookup relationship
- B. Master-detail relationship
- C. Roll-up summary
- D. Formula

Answer: B

Explanation:
The app builder should create a master-detail relationship field on the gift card object to support the requirement. A master-detail relationship field creates a parent-child relationship between two objects, where the master record controls certain behaviors of the detail record. In this case, the Account object would be the master and the gift card object would be the detail. By creating a master-detail relationship field, the app builder can meet these requirements:
Track the total number of gift cards opened and gift cards issued on an Account: This can be done by creating roll-up summary fields on the Account object that count or sum up the values from the gift card records related to each account.
Permanently ensure the gift cards are unable to be moved across any other Account once it is created: This can be done by making the master-detail relationship field required on the gift card object, which means that every gift card record must be associated with an account record and cannot be changed once set. Option B, C, and D are not types of fields that can support this requirement.

NEW QUESTION # 38
A business user at Universal Containers wants to update an Account directly from an Opportunity record.
What should the app builder create to allow the business user to make these edits?

- A. Opportunity fields updated by a process.
- B. Formula fields displaying the Account fields.

- C. An update record action with a details component
- D. An update record action with a related record component.

Answer: D

Explanation:
