## Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q255-Q260):

### NEW QUESTION # 255

Which of the following is a hardware or software-based network security device that monitors incoming and outgoing network traffic and decides whether to allow or block specific traffic based on predefined security rules?

- A. VPN
- **B. Firewall**
- C. NAC
- D. ACL

**Answer: B**

Explanation:

A firewall is a hardware or software-based network security device that acts as a barrier between internal and external networks. It monitors network traffic and applies predefined rules to determine whether to allow or block specific traffic. Firewalls are commonly used to protect network infrastructure and prevent unauthorized access by filtering out potentially harmful or suspicious traffic.

### NEW QUESTION # 256

Which of the following control types is focused on identifying vulnerabilities and weaknesses in systems and addressing them?

- **A. Corrective controls**
- B. Compensating controls
- C. Preventive controls
- D. Detective controls

**Answer: A**

Explanation:

Corrective controls are designed to identify and rectify vulnerabilities and weaknesses in systems. They aim to correct issues identified through assessments, audits, or incident response, and ensure that the necessary steps are taken to minimize the associated risks. Examples of corrective controls include patch management, vulnerability scanning, and system hardening procedures.

### NEW QUESTION # 257

Which of the following best describes the purpose of the MITRE ATT&CK; Matrix?

- A. To map vulnerabilities and exposures in computer systems
- B. To track the global distribution of cyber threat actors
- C. To analyze the impact of cyber threats on critical infrastructure
- **D. To provide a standardized way to categorize cyber threat tactics and techniques**

**Answer: D**

Explanation:

The MITRE ATT&CK; Matrix provides a comprehensive framework that categorizes various tactics, techniques, and procedures (TTPs) used by cyber threat actors. It enables organizations to understand how different attackers operate and helps in developing effective cybersecurity defenses and detection mechanisms.

### NEW QUESTION # 258

Which of the following is a characteristic of weak encryption algorithms?

- A. They provide encryption keys with longer bit lengths.

- B. They are resistant to brute force attacks.
- **C. They are susceptible to cryptanalysis attacks.**
- D. They support secure communication protocols.

**Answer: C**

Explanation:

Weak encryption algorithms are those that can be easily broken or exploited using various encryption analysis techniques. These algorithms have vulnerabilities that can be used to decrypt the encrypted data without the need for the encryption key.

### NEW QUESTION # 259

What is a common outcome of the policy development phase in cybersecurity planning?

- A. Identification of security vulnerabilities
- B. Creation of incident response plans
- C. Implementation of technical controls
- **D. Development of security awareness training programs**

**Answer: D**

Explanation:

The policy development phase in cybersecurity planning involves creating and documenting the policies and procedures that guide the organization's cybersecurity practices. It often includes the development of security awareness training programs to educate employees about their roles and responsibilities in maintaining cybersecurity and to promote good security practices throughout the organization.
