In today's competitive industry, only the brightest and most qualified candidates are hired for high-paying positions. Obtaining CIS-Discovery is a wonderful approach to be successful because it can draw in prospects and convince companies that you are the finest in your field. Pass the CIS-Discovery Exam to establish your expertise in your field and receive certification. However, passing the Certified Implementation Specialist - Discovery CIS-Discovery exam is challenging.

ServiceNow is a software company that provides cloud-based solutions to help businesses manage their IT operations. One of their most popular offerings is the ServiceNow platform, which includes a range of tools for IT service management, IT operations management, and IT business management. To help customers get the most out of the platform, ServiceNow offers a range of certifications for IT professionals, including the Certified Implementation Specialist (CIS) certification.

ServiceNow CIS-Discovery : Certified Implementation Specialist - Discovery exam comprises 60 multiple-choice questions, which must be completed within 90 minutes. The passing score is 70%, and the exam is proctored. CIS-Discovery exam is divided into three distinct sections: Discovery Capabilities, ServiceNow Platform Management, and Discovery Implementation.

Pass Guaranteed 2026 ServiceNow CIS-Discovery –High Pass-Rate Exam Tutorials

If you buy our CIS-Discovery study materials, then you can enjoy free updates for one year. After you start learning, I hope you can set a fixed time to check emails. If the content of the CIS-Discovery practice guide or system is updated, we will send updated information to your e-mail address. Of course, you can also consult our e-mail on the status of the product updates. I hope we can work together to make you better use our CIS-Discovery simulating exam.

To prepare for the CIS-Discovery exam, it is recommended that you have experience working with ServiceNow Discovery and have completed the Discovery Fundamentals course. You can also access additional resources, such as study guides and practice exams, to help you prepare. Once you pass the exam, you will receive the CIS-Discovery Certification, which is valid for two years. Overall, the CIS-Discovery exam is a valuable credential for IT professionals who work with ServiceNow Discovery and want to demonstrate their expertise in this area.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q36-Q41):

NEW QUESTION # 36
What network protocol is needed to discover network devices like routers, switches etc?
Response:

- A. 1)SSH Protocol with username/password, or private key
  2) Root or Sudo privileges must be granted
- B. 1) WMI Protocol with username/password
  2) Domain Administrator permission
- C. 1) SNMP Protocol with community string

Answer: C

NEW QUESTION # 37
Based on this image, which of the following statements are true? (Choose three.)

- A. If a value is unmatched, it is still merged into the Target Table.
- B. Attributes from two tables populate a table with the same name as a ServiceNow CMDB table.
- C. This operation is more than likely a part of a step on a pattern set to Application Pattern Type.
- D. For this operation to run, there must be some data in the process.executablePath variable.
- E. This is a horizontal pattern of type "infrastructure."

Answer: C,D,E

NEW QUESTION # 38
Which of the following choices explain differences between Service Mapping and Discovery? (Choose two.)

- A. Discovery requires agent installation to find hardware devices, Service Mapping requires agents for software.
- B. Discovery addresses inventory-related use-cases, while Service Mapping allows for the creation of accurate maps of application service topologies.
- C. Discovery utilizes IP address ranges for initial discovery, Service Mapping uses entry points.
- D. Discovery finds applications and devices on your network, Service Mapping monitors those devices.

Answer: B,C

Explanation:
Discovery and Service Mapping are both products that help to identify and map the IT infrastructure and services in an organization. However, they have different approaches and objectives. Discovery uses IP address ranges as the starting point for finding devices and applications on the network, and then runs probes and sensors to collect information and classify them. Discovery focuses on inventory-related use-cases, such as asset management, configuration management, and compliance. Service Mapping uses entry points, such as URLs or host names, as the starting point for mapping business services and their dependencies. Service Mapping runs patterns, which are sequences of operations that follow the traffic connections between devices and applications, and then creates a service map that shows the logical and semantic relationships. Service Mapping focuses on service-related use-cases, such as service availability, impact analysis, and root cause analysis12.

NEW QUESTION # 39
Which of the following related lists can assist with troubleshooting discovery from a discovery status?
Choose 3 answers

- A. ECC Queue
- B. Discovery Log
- C. Devices
- D. Running Processes

Answer: A,B,C

Explanation:
To troubleshoot discovery issues from a discovery status in ServiceNow, the following related lists can be particularly useful:
* Discovery Log - Provides detailed logs of the discovery process, helping to identify errors or issues encountered during discovery.
* ECC Queue - Shows the messages and data passed between the ServiceNow instance and the MID Server, offering insights into the communication and data exchange during discovery.
* Devices - Lists the devices discovered in the process, allowing for a direct view of the results and any potential issues with specific devices.
The "Running Processes" list is not typically used for troubleshooting discovery processes as it relates more to the operational aspects of the server or device rather than the discovery process itself. References = ServiceNow Discovery documentation, specifically the sections on Discovery troubleshooting and analysis, and the use of related lists for monitoring and troubleshooting purposes.

NEW QUESTION # 40
What role is needed by the MID Server's user account to interact with a ServiceNow instance?

- A. mid_server
- B. sm_mid
- C. mid_discovery
- D. discovery_admin

Answer: A

Explanation:
The MID Server's user account must have the mid_server role to interact with a ServiceNow instance. This role allows the MID Server to access protected tables and perform discovery and orchestration tasks on behalf of the instance. The other roles are not related to the MID Server functionality. The discovery_admin role is for configuring and managing discovery, the sm_mid role is for using the Service Mapping MID Server, and the mid_discovery role is for running discovery probes and sensors.
:
Setting up MID Server user and role
Configure Windows MID Server service credentials
Correcting MID Server Windows service account user and permissions
