Avail Useful New MuleSoft-Integration-Architect-I Test Fee to Pass MuleSoft-Integration-Architect-I on the First Attempt

The countless candidates have already passed their MuleSoft-Integration-Architect-I certification exam and they all used the real, valid, and updated VCETorrent MuleSoft-Integration-Architect-I exam questions. So, why not, take a decision right now and ace your MuleSoft-Integration-Architect-I Exam Preparation with top-notch MuleSoft-Integration-Architect-I exam questions?

Salesforce Certified MuleSoft Integration Architect I Sample Questions (Q64-Q69):

NEW QUESTION # 64
An organization will deploy Mule applications to Cloudhub, Business requirements mandate that all application logs be stored ONLY in an external splunk consolidated logging service and NOT in Cloudhub.
In order to most easily store Mule application logs ONLY in Splunk, how must Mule application logging be configured in Runtime Manager, and where should the log4j2 splunk appender be defined?

- A. Keep the default logging configuration in Runtime ManagerDefine the Splunk appender in EACH Mule application log4j2.xml file
- B. Keep the default logging configuration in RuntimeManagerDefine the splunk appender in ONE global log4j.xml file that is uploaded once to Runtime Manager to support at Mule application deployments.
- C. Disable Cloudhub logging in Runtime ManagerDefine the splunk appender in EACH Mule application' s log4j2.xml file
- D. Disable Cloudhub logging in Runtime ManagerDefine the splunk appender in ONE global log4j.xml file that is uploaded once to Runtime Manger to support at Mule application deployments.

Answer: C

Explanation:
By default, CloudHub replaces a Mule application's log4j2.xml file with a CloudHub log4j2.xml file. In CloudHub, you can disable the CloudHub provided Mule application log4j2 file. This allows integrating Mule application logs with custom or third-party log management systems

NEW QUESTION # 65
A Mule application is built to support a local transaction for a series of operations on a single database. The Mule application has a Scatter-Gather that participates in the local transaction.
What is the behavior of the Scatter-Gather when running within this local transaction?

- A. Execution of each route within the Scatter-Gather occurs in parallel Any error that occurs inside the Scatter-Gather will NOT result in a rollback of any of the database operations
- B. Execution of each route within the Scatter-Gather occurs sequentially Any error that occurs inside the Scatter-Gather will NOT result in a rollback of any of the database operations
- C. Execution of each route within the Scatter-Gather occurs sequentially Any error that occurs inside the Scatter-Gather will result in a rollback of all the database operations
- D. Execution of all routes within the Scatter-Gather occurs in parallel Any error that occurs inside the Scatter-Gather will result in a rollback of all the database operations

Answer: C

NEW QUESTION # 66
A corporation has deployed multiple mule applications implementing various public and private API's to different cloudhub workers. These API's arc Critical applications that must be highly available and in line with the reliability SLA as defined by stakeholders.
How can API availability (liveliness or readiness) be monitored so that Ops team receives outage notifications?

- A. Enable monitoring of individual applications from Anypoint monitoring
- B. Configure alerts failure conditions in API manager
- C. Use any point functional monitoring test API's functional behavior
- D. Configure alerts with failure conditions in runtime manager

Answer: A

Explanation:
To ensure the high availability and reliability of critical APIs, it is essential to monitor their liveliness and readiness. Anypoint Monitoring provides comprehensive monitoring capabilities for Mule applications. Here' s how it can be implemented:
* Application Monitoring: Enable monitoring for each individual Mule application. This allows for real- time visibility into the performance and health of each API.
* Custom Dashboards: Create custom dashboards in Anypoint Monitoring to track key metrics such as response time, error rates, and throughput.
* Alerts and Notifications: Configure alerts based on specific failure conditions or performance thresholds. These alerts can notify the Ops team immediately when an outage or performance degradation is detected.
* Proactive Management: With detailed insights and proactive alerts, the Ops team can quickly respond to issues, ensuring that the APIs remain available and meet the defined SLAs.
References:
* Anypoint Monitoring
* Configuring Alerts

NEW QUESTION # 67

According to MuleSoft's recommended REST conventions, which HTTP method should an API use to specify how AP\ clients can request data from a specified resource?

- A. PUT
- B. POST
- C. GET
- D. PATCH

Answer: C

Explanation:

According to MuleSoft's recommended REST conventions, the HTTP method GET should be used to specify how API clients can request data from a specified resource. The GET method is designed to retrieve data from a server at the specified resource. It is one of the most common HTTP methods used in RESTful APIs, ensuring that data retrieval is performed without any side effects on the server or resource.

* HTTP Methods in RESTful Services

NEW QUESTION # 68

Refer to the exhibit.

Anypoint Platform supports role-based access control (RBAC) to features of the platform. An organization has configured an external Identity Provider for identity management with Anypoint Platform.

What aspects of RBAC must ALWAYS be controlled from the Anypoint Platform control plane and CANNOT be controlled via the external Identity Provider?

- A. Assigning Anypoint Platform role(s) to a user
- B. Removing a user's access to Anypoint Platform when they no longer work for the organization
- C. Controlling the business group within Anypoint Platform to which the user belongs
- D. Assigning Anypoint Platform permissions to a role

Answer: D

Explanation:

* By default, Anypoint Platform performs its own user management

- For user management, one external IdP can be integrated with the Anypoint Platform organization (note: not at business group level)

- Permissions and access control are still enforced inside Anypoint Platform and CANNOT be controlled via the external Identity Provider * As the Anypoint Platform organization administrator, you can configure identity management in Anypoint Platform to set up users for single sign-on (SSO). * You can map users in a federated organization's group to a role which also gives the flexibility of controlling the business group within Anypoint Platform to which the user belongs to. Also user can nbe removed from external identity management system when they no longer work for the organization. So they wont be able to authenticate using SSO to login to Anypoint Platform. * Using external identity we can no change permissions of a particular role in Mulesoft Anypoint platform.

* So Correct answer is Assigning Anypoint Platform permissions to a role

NEW QUESTION # 69

......

I think these smart tips will help you to study well for the exam and get a brilliant score without any confusion. To get the Salesforce Certified MuleSoft Integration Architect I MuleSoft-Integration-Architect-I practice test, find a reliable source that provides the MuleSoft-Integration-Architect-I Exam Dumps to their clients. Salesforce Certified MuleSoft Integration Architect I MuleSoft-Integration-Architect-I certification exams are not easy but quite tricky to know whether the applicant has complete knowledge regarding the subject or not.

Exam Dumps MuleSoft-Integration-Architect-I Collection: https://www.vcetorrent.com/MuleSoft-Integration-Architect-I-valid-vce-torrent.html
