

# Free PDF Quiz CDFOM - High Pass-Rate Valid Certified Data Center Facilities Operations Manager Test Pattern

P.S. Free 2026 EXIN CDFOM dumps are available on Google Drive shared by ValidExam: [https://drive.google.com/open?id=1CKtrmdxLQnlPHoqxipX4sMtFVOW\\_sYkY](https://drive.google.com/open?id=1CKtrmdxLQnlPHoqxipX4sMtFVOW_sYkY)

Our company concentrates on relieving your pressure of preparing the CDFOM exam. Getting the certificate equals to embrace a promising future and good career development. Perhaps you have heard about our CDFOM exam question from your friends or news. Why not has a brave attempt? You will certainly benefit from your wise choice. Now our CDFOM practice materials have won customers' strong support. Our sales volume is increasing every year. The great achievements benefit from our enormous input. First of all, we have done good job on researching the new version of the CDFOM exam question.

## EXIN CDFOM Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Environmental Sustainability: Focuses on minimizing environmental impact through power efficiency, waste management, and renewable energy integration.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Managing Safety &amp; Statutory Requirements: Focuses on workplace safety compliance, including safety policies, training, Permit to Work systems, PPE, emergency preparedness, and safety audits.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Managing Physical Security: Deals with facility protection through security policies, staff management, incident handling, and security audits.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Monitoring</li> <li>Reporting</li> <li>Control: Addresses performance oversight through monitoring, escalation procedures, reporting, and trend analysis.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Project Management: Covers project execution including management principles, organizational structures, and project phases.</li> </ul>

## CDFOM Exam Questions And Answers - CDFOM Valid Guide Files

Everything needs a right way. The good method can bring the result with half the effort, the same different exam also needs the good test method. Our CDFOM study materials in every year are summarized based on the test purpose, every answer is a template, there are subjective and objective exams of two parts, we have in the corresponding modules for different topic of deliberate practice. To this end, our CDFOM Study Materials in the qualification exam summarize some problem- solving skills, and induce

some generic templates.

## EXIN Certified Data Center Facilities Operations Manager Sample Questions (Q58-Q63):

### NEW QUESTION # 58

According to the World Economic Forum, which of the below is the largest global risk of the next decade?

- A. Air quality in large cities
- B. Earthquakes
- C. Global climate change
- D. Water scarcity

**Answer: C**

Explanation:

While not strictly internal to EPI's core domain (which deals with data centre operations), this question refers to the external risk landscape, as identified by the World Economic Forum (WEF). The WEF's Global Risks Report 2025 shows that environmental risks dominate the 10-year horizon, with extreme weather, ecosystem collapse, and climate-related disruption ranking highest. Specifically, global climate change (or extreme weather/climate-related events) is rated as the most severe risk over the next decade. While water scarcity and air quality are significant, the WEF ranks climate change / extreme weather as the top long-term threat. Therefore, option A is the most correct.

EPI DCFOM-Aligned Reference Concepts (Paraphrased)

- \* Environmental sustainability forms a major component of data centre operations risk and resilience planning.
- \* External macro-risks such as climate change must be integrated into facility resilience, power planning, cooling design, and business continuity strategies.

### NEW QUESTION # 59

During lock-out/tag-out, which of the below is the most recommended procedure?

- A. Operator locking out the equipment and another operator removing the lock-out
- B. Operator locking out the equipment and the facilities manager removing the lock-out
- C. Operator locking out the equipment and the same operator removing the lock-out
- D. Operator locking out the equipment and the safety manager removing the lock-out

**Answer: C**

Explanation:

In the EPI Facilities Operations Manager body of knowledge, the Lock-Out/Tag-Out (LOTO) procedure is a mandatory safety control to ensure that electrical or mechanical equipment cannot be energized while work is being performed. A core principle emphasized in EPI safety training is:

"The person who applies the lock must be the same person who removes it." This aligns with international best practices for occupational health and safety, where LOTO ensures that the individual performing maintenance or repair has full control of the energy isolation device.

Why this is required:

\* Personal Safety Responsibility The lock identifies the technician directly working on the equipment.

Only they can confirm whether work is complete and the area is safe for re-energizing.

\* Risk Prevention If someone else removes the lock (another operator, safety manager, or facilities manager), they may incorrectly assume that the equipment is ready to be restored, which can lead to severe injury or fatality.

\* Compliance With EPI Safety Guidelines EPI emphasizes the principle of "single-person control" over hazardous energy. No supervisor or colleague may remove another technician's lock unless a formal, documented emergency override procedure is followed - which is not considered standard practice.

\* Clear Accountability Chain LOTO prevents ambiguity or miscommunication. The technician who placed the lock is the only one with full knowledge of the work status and hazards involved.

Why other options are incorrect:

\* A, B, and C violate the fundamental LOTO rule because they involve someone other than the applying operator removing the lock.

\* Oversight personnel (safety manager, facilities manager) monitor and audit the process, but they should not remove another person's lock except under rare, emergency, escalation-approved situations.

EPI DCFOM-Aligned Reference Concepts

\* LOTO must ensure the isolation device is locked and tagged by the person performing the work.

- \* Only the same individual may remove their own lock.
- \* Removal by another party is only permitted under controlled, documented emergency protocols.
- \* The process prevents accidental energization and protects worker safety.

### NEW QUESTION # 60

During what project phase do you need to start involving the stakeholders?

- A. Executing the project
- B. Monitoring and control the project
- C. Planning the project
- **D. Initiating the project**

**Answer: D**

Explanation:

Stakeholder involvement must begin at the very start of the project lifecycle, during the Initiation Phase, because:

- \* Stakeholders influence project scope, objectives, and constraints.
- \* Their expectations and requirements must be captured early.
- \* Stakeholder identification is a mandatory output of the initiation process.
- \* Failing to involve them early leads to misalignment, rework, and scope conflicts.

EPI aligns with general project management principles that state:

"Stakeholder identification and engagement begins at project initiation and continues throughout the entire project." Why other options are incorrect:

- \* B: Planning depends on stakeholder input already gathered.
- \* C: Too late-execution requires validated stakeholder requirements.
- \* D: Monitoring occurs after execution has begun.

Thus, A is correct.

EPI DCFOM-Aligned Reference Concepts (Paraphrased)

- \* Stakeholders must be identified and engaged in the initiation phase.
- \* Their input forms the foundation for scope definition and planning.

### NEW QUESTION # 61

What is the formula to calculate the PUE of a Data Center?

- A.  $PUE = VA * PF$
- B.  $PUE = \text{Total generator capacity} / \text{total battery capacity}$
- **C.  $PUE = \text{Total facility power} / \text{Total IT equipment power}$**
- D.  $PUE = \text{UPS input power} / \text{UPS output power}$

**Answer: C**

Explanation:

Power Usage Effectiveness (PUE) is the most widely recognized efficiency metric in the data center industry and is strongly emphasized within EPI's environmental sustainability and energy management teachings. PUE is designed to show how efficiently a data center uses energy, focusing specifically on how much of the total facility energy actually reaches the IT equipment. The correct formula is:

$$PUE = \text{Total Facility Power} \div \text{Total IT Equipment Power}$$

"Total Facility Power" includes all supporting infrastructure: cooling systems, UPS losses, power distribution losses, lighting, security, fire systems, and all auxiliary loads required to operate the data center. "Total IT Equipment Power" refers only to the active IT load such as servers, storage, and network devices.

A PUE value close to 1.0 indicates optimum energy efficiency, meaning nearly all facility energy is being consumed directly by IT operations. Higher PUE values indicate less efficient facilities where substantial energy is being consumed by overhead systems. This metric is essential for sustainability strategies, capacity planning, and continuous improvement. It allows benchmarking across facilities and helps operators set improvement targets by analyzing where energy losses occur. Because of its simplicity and clarity, PUE remains an industry-standard metric recognized globally.

### NEW QUESTION # 62

What is the main reason for (senior) management to be scheduled into the 'on-duty' roster?

- A. It provides management better insights with the number of incidents occurring
- B. It provides management hands-on experience solving incidents.
- C. It assists management in optimally reviewing monitoring thresholds
- **D. It involves management when incidents are escalating**

**Answer: D**

Explanation:

Senior management is included in the duty roster to support escalation procedures.

In EPI's operational model:

- \* Managers are not part of routine monitoring or incident handling
- \* Their role is to intervene only when an incident escalates beyond operational authority, such as major outages, SLA-impacting events, or high-risk situations.
- \* Management provides decision-making, authorization, and resource allocation during escalations.

Why other options are incorrect:

- \* A: Managers should not gain "hands-on" experience during incidents.
- \* B: Incident reporting already provides insights; no roster needed.
- \* D: Monitoring thresholds are reviewed separately, not via duty rosters.

Thus, C is correct.

EPI DCFOM-Aligned Reference Concepts (Paraphrased)

- \* Management is involved in the escalation layer, not daily operations.
- \* Duty rosters ensure proper escalation handling and governance.

## NEW QUESTION # 63

.....

It may be a contradiction of the problem, we hope to be able to spend less time and energy to take into account the test CDFOM certification, but the qualification examination of the learning process is very wasted energy, so how to achieve the balance? The CDFOM Exam Prep can help you make it. With the high-effective CDFOM exam questions, we can claim that you can attend the exam and pass it after you focus on them for 20 to 30 hours.
