AZ-120 Exam Questions in PDF Format

Microsoft certification AZ-120 exam is a test of IT professional knowledge. Exam4Free is a website which can help you quickly pass Microsoft certification AZ-120 exams. In order to pass Microsoft certification AZ-120 exam, many people who attend Microsoft certification AZ-120 exam have spent a lot of time and effort, or spend a lot of money to participate in the cram school. Exam4Free is able to let you need to spend less time, money and effort to prepare for Microsoft Certification AZ-120 Exam, which will offer you a targeted training. You only need about 20 hours training to pass the exam successfully.

Microsoft AZ-120 is a certification exam that focuses on the skills and knowledge required for planning and administering Microsoft Azure for SAP workloads. AZ-120 exam is designed for professionals who are responsible for managing and deploying SAP solutions on Azure. AZ-120 Exam is one of the most valued exams for professionals seeking to enhance their skills in cloud computing and SAP workload management.

Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q218-Q223):

NEW QUESTION # 218

You are deploying an SAP environment across Azure Availability Zones. The environment has the following components:

- ASCS/ERS instances that use a failover cluster

- SAP application servers across the Azure Availability Zones

- Database high availability by using a native database solution

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
Network latency is a limiting factor when deploying DBMS instances that use synchronous replication across the Azure Availability Zones.	☐	☐
The performance of SAP systems can be validated by using ABAPMeter.	☐	☐
To help identify the best Azure Availability Zones for deploying the SAP components, you can use NIPING to verify network latency between the zones.	☐	☐

Answer:

Explanation:

Statements	Yes	No
Network latency is a limiting factor when deploying DBMS instances that use synchronous replication across the Azure Availability Zones.	☒	☐
The performance of SAP systems can be validated by using ABAPMeter.	☒	☐
To help identify the best Azure Availability Zones for deploying the SAP components, you can use NIPING to verify network latency between the zones.	☒	☐

Explanation:

Box 1: Yes

Box 2: Yes

AAP application server to database server latency can be tested with ABAPMeter report /SSA/CAT.

Box 3: Yes

To analyze network issue or measure network metrics you can test the connection using SAP's NIPING program. You can use NIPING to analyze the network connection between any two machines running SAP software.

NEW QUESTION # 219

You are planning an SAP NetWeaver deployment on Azure. The database her will consist of Two Azure virtual machines that have Microsoft SQL Server 2017 installed. Each virtual machine will be deployed to a separate availability zone.

You need to perform the following:

* Minimize network latency between the virtual machines.

* Measure network latency between the virtual machines.

What should you do? To answer, select the appropriate options in the answer area.

Answer selected as in image below.

Answer Area

To minimize latency:

To measure latency, use:

Answer:

Explanation:

Answer Area

NEW QUESTION # 220

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
Enabling Accelerated Networking on an SAP application server will decrease CPU usage.	☐	☐
Enabling Accelerated Networking on an SAP application server will increase jitter.	☐	☐
You can enable Accelerated Networking on any Azure virtual machine.	☐	☐

Answer:

NEW QUESTION # 221

You have an Azure AD tenant named contoso.com that syncs to an Active Directory domain hosted on an Azure virtual machine. You plan to deploy an SAP NetWeaver landscape on Azure that will use SUSE Linux Enterprise Server (SLES).

You need to recommend an authentication solution for the following scenarios. The solution must support Azure Multi-Factor Authentication (MFA);

- * Administrators sign in to SLES Azure virtual machines.
- * A user signs in to an SAP NetWeaver application.

What should you recommend for each scenario? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 222

You have an SAP Cloud Platform subscription and an Azure Active Directory (Azure AD) tenant.

You need to ensure that Azure AD users can access SAP Cloud App by using their Azure AD credentials.

What should you configure?

- A. Active Directory Domain Services (AD DS)
- B. SAP Cloud Platform Identity Authentication
- C. A conditional access policy
- D. SAP Cloud Connector

Answer: A

Explanation:

When you integrate SAP Cloud Platform Identity Authentication with Azure AD, you can:

Control in Azure AD who has access to SAP Cloud Platform Identity Authentication.

Enable your users to be automatically signed-in to SAP Cloud Platform Identity Authentication with their Azure AD accounts.

Manage your accounts in one central location - the Azure portal.
