Reliable 220-1202 Exam Preparation & 220-1202 Valid Test Syllabus

Our company is a professional certificate exam materials provider, and we have occupied in this field for years. 220-1202 exam dumps are high-quality, and we have received many good feedbacks from our customers. In addition, we offer you free demo for you to have a try before buying 220-1202 Exam Braindumps, and you will have a better understanding of what you are going to buy. We have online and offline chat service stuffs, who are quite familiar with the 220-1202 exam dumps, if you have any questions, just contact us.

CompTIA A+ Certification Exam: Core 2 Sample Questions (Q72-Q77):

NEW QUESTION # 72

An employee is trying to connect their company laptop to an airport's Wi-Fi during a business trip. Once the network is connected, a pop-up window appears with the airport logo, which the employee quickly closes.

The internet connection is not working properly. Which of the following should a help desk technician suggest?

- A. Contact the airport IT department
- B. Reconnect to the network and read the pop-up carefully
- C. Tell the employee that company policy prohibits connection to public Wi-Fi
- D. Look for a wall socket with RJ45 and try to connect the laptop to it

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Most public Wi-Fi networks require interaction with a captive portal (e.g., terms of use or login). Dismissing it prevents the user from gaining internet access. Reconnecting and completing the portal page is essential.

From All-in-One Exam Guide:

"Many public hotspots require user acknowledgment or login via a captive portal. Skipping this step results in no internet access."

NEW QUESTION # 73

A help desk technician needs to remove RAM from retired workstations and upgrade other workstations that have applications that use more memory with this RAM. Which of the following actions would the technician most likely take?

- A. Plug in the power supply to ground each workstation.
- B. Install memory in identical pairs.
- C. Demagnetize memory for security.
- D. Use antistatic bags for storage and transport.

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

RAM is an electrostatic-sensitive component. When removing or transporting RAM modules, they should be stored in antistatic bags to protect against electrostatic discharge (ESD), which can damage the memory. This is a standard best practice in hardware handling.

A: Demagnetization is not applicable to RAM.

C: Plugging in power to ground is not safe or recommended for static protection.

D: Installing identical memory pairs is applicable for dual-channel configuration, but not directly related to transporting or handling RAM.

Reference:

CompTIA A+ 220-1102 Objective 4.3: Explain environmental impacts and procedures.

Study Guide Section: ESD safety practices and component handling procedures

NEW QUESTION # 74

Technicians are failing to document user contact information, device asset tags, and a clear description of each issue in the ticketing system. What should the help desk management implement?

- A. Service-level agreements
- B. Call categories
- C. Knowledge base articles
- D. Standard operating procedures

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Standard Operating Procedures (SOPs) guide technicians through consistent and complete processes, including documentation.

From Travis Everett - All-in-One Exam Guide:

"SOPs ensure that all required steps—such as data collection and issue description—are followed in every support interaction."

NEW QUESTION # 75

An organization sees unauthorized apps installed and licensing prompts. What should the security team do?

- A. Enable stricter UAC settings on Windows.
- B. Implement stronger controls to block suspicious websites.
- C. Remove users from the local admin group.
- D. Deploy an internal PKI to filter encrypted web traffic.

Answer: C

Explanation:

Removing users from the local admin group prevents them from installing unauthorized software.

From Quentin Docter - Complete Study Guide:

"Local admin privileges allow users to install unauthorized apps. Removing them from this group restricts installations and helps prevent malware.".

NEW QUESTION # 76

You are configuring a home network for a customer. The customer has requested the ability to access a Windows PC remotely, and needs all chat and optional functions to work in their game console.

INSTRUCTIONS

Use the drop-down menus to complete the network configuration for the customer. Each option may only be used once, and not all options will be used.

Then, click the + sign to place each device in its appropriate location.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

Wireless AP LAN

Firewall Screened Subnet

Answer:

Explanation:

See explanation below.

Explanation:

The completed configuration:

1. Wireless AP (LAN side)
1. LAN IP: 192.168.10.1
2. Encryption: WPA2 PSK
2. Router (port-forward rule)
1. Allow TCP Any 3389

This forwards inbound RDP traffic (TCP/3389) from the Internet to the Windows PC, enabling Remote Desktop access.

3. Firewall (screened subnet side)
1. LAN IP: 10.100.0.1
4. Device placement

1. PC: place behind the router (where the port-forward rule points).
2. Game console: place on the Wireless AP (so it can use chat and extra services over WPA2 PSK).
3. Firewall: place in front of the screened subnet (with its 10.100.0.1 IP facing that subnet).

The Windows PC is placed in the screened subnet (behind the firewall) for enhanced security. Remote access to this PC requires port forwarding of TCP port 3389 (RDP), which is correctly configured through the router.

The Game Console is placed on the Wireless AP LAN, using WPA2 PSK for a secure wireless connection.

Game consoles typically use peer-to-peer chat and online services that require open access without firewall restrictions, which is why the console is not placed behind the firewall.

CompTIA A+ 220-1102 Reference Points:

Objective 3.4: Given a scenario, implement best practices associated with data and device security.

Objective 2.4: Given a scenario, use appropriate tools to support and configure network settings.

Study Guide Reference: CompTIA A+ Core 2 guides recommend using screened subnets (a type of DMZ) for systems needing controlled external access, such as remote desktops, while placing gaming and media devices on less restricted networks for full functionality.

NEW QUESTION # 77

.....

Our CompTIA A+ Certification Exam: Core 2 (220-1202) PDF file is portable which means customers can carry this real questions document to any place. You just need smartphones, or laptops, to access this CompTIA A+ Certification Exam: Core 2 (220-1202) PDF format. These CompTIA A+ Certification Exam: Core 2 (220-1202) questions PDFs are also printable. So candidates who prefer to study in the old way which is paper study can print CompTIA A+ Certification Exam Core 2 (220-1202) questions PDF as well.
