Prep4King provides 24/7 customer support to answer any of your queries or concerns regarding the HCIP-Access V2.5 (H35-211\_V2.5) certification exam. They have a team of highly skilled and experienced professionals who have a thorough knowledge of the HCIP-Access V2.5 (H35-211\_V2.5) exam questions and format.

Huawei H35-211\_V2.5 (HCIP-Access V2.5) Exam is a certification test designed to assess the skills and knowledge of IT professionals in the field of access network technologies. H35-211\_V2.5 exam is intended for individuals who are responsible for designing, deploying, and managing access networks in enterprise environments. HCIP-Access V2.5 certification validates the candidate's ability to configure and troubleshoot access network devices, implement network security mechanisms, and optimize network performance.

## H35-211\_V2.5 Verified Answers | H35-211\_V2.5 Test Duration

We all well know the status of Huawei certification H35-211\_V2.5 exams in the IT area is a pivotal position, but the key question is to be able to get Huawei H35-211\_V2.5 certification is not very simple. We know very clearly about the lack of high-quality and high accuracy exam materials online. Exam practice questions and answers Prep4King provide for all people to participate in the IT industry certification exam supply all the necessary information. Besides, it can all the time provide what you want. Buying all our information can guarantee you to pass your first Huawei Certification H35-211\_V2.5 Exam.

The Huawei H35-211\_V2.5 Exam covers a wide range of topics, including access network principles, access network construction, access network maintenance, access network security, and access network troubleshooting. It also includes practical exercises and scenarios that test a candidate's ability to apply their knowledge to real-world situations. H35-211\_V2.5 exam is designed to ensure that candidates have a deep understanding of access network technologies and can design, deploy, and manage access networks effectively.

Candidates must also be able to troubleshoot access network issues and implement network security measures, such as firewalls, VPNs, and access control lists. They must have a good understanding of network management principles and be able to use network management tools to monitor and optimize network performance.

## Huawei HCIP-Access V2.5 Sample Questions (Q78-Q83):

### NEW QUESTION # 78

Which of the following statements about terminal selection principles are correct?

- A. Project requirements do not need to be considered.
- B. Cost needs to be considered.
- C. Special requirements must be considered.
- D. Terminal types should be selected based on the network construction mode.

**Answer: B,C,D**

Explanation:

Terminal (ONT/ONU/CPE) selection adheres to engineering principles: align model and interfaces with the deployment mode and scenario, evaluate TCO/cost, and satisfy special requirements (such as PoE, Wi-Fi specs, voice/FXS, industrial temperature). Ignoring project requirements is contrary to standard design workflows; therefore D is not correct.

### NEW QUESTION # 79

(Radio) When configuring multicast services on MA5600T/MA5680T, the programs of multicast VLANs are statically configured. Which of the following must be configured, otherwise the multicast programs may not be able to be watched?

- A. igmp preview
- B. igmp profile
- C. igmp program
- D. igmp priority

**Answer: C**

Explanation:

On Huawei OLTs (e.g., MA5600T/MA5680T), deploying IPTV/multicast commonly uses a program list (channel list) to map program numbers to multicast group addresses-this is configured with igmp program.

When programs are statically configured under the multicast VLAN, the program definitions themselves are mandatory; without them, set-top boxes cannot select (zap to) channels by program number/address mapping and the OLT cannot correctly forward the requested multicast streams.

### NEW QUESTION # 80

If a rogue ONU exists on a PON port of the OLT and has gone online, another ONT or all ONTs connected to the same PON port may go offline or go online and offline frequently.

- A. FALSE
- B. TRUE

**Answer: B**

Explanation:

A rogue ONU that transmits out of schedule or at abnormal optical levels can disrupt upstream time-slotting on the PON, causing collision and interference. This can force other ONUs on the same PON to deregister or flap frequently. Huawei OLTs provide rogue ONU detection/isolation to protect the PON.

(Rogue ONU detection and isolation).

#### NEW QUESTION # 81

Under the H.248 protocol, if the signaling IP and media IP are both 10. 1. 1. 100/8, voice gateway is 10. 1. 1. 1. When configuring voIP service, the following command is incorrect

- A. Using the command **ip address signaling 10 in voip mode. 1. 1. 100 10. 1. 1. 1** Configure the signaling IP
- B. Use the `if-h248 attribute` command to configure interface properties under the voice interface
- C. Using the command `ip address media 10 in voip mode. 1. 1. 100 10. 1. 1. 1` Configure the media IP
- D. Use the `reset coldstart` command under Voice Interface to make the interface property configuration take effect

**Answer: A**

#### NEW QUESTION # 82

During POL planning and design, device naming rules need to be set.

- A. FALSE
- B. TRUE

**Answer: B**

#### NEW QUESTION # 83
