Do you want to ace the ECCouncil 312-85 exam in one go? If so, you have come to the right place. You can get the updated 312-85 exam questions from It-Tests, which will help you crack the 312-85 test on your first try. These days, getting the Certified Threat Intelligence Analyst (312-85) certification is in demand and necessary to get a high-paying job or promotion. Many candidates waste their time and money by studying outdated Certified Threat Intelligence Analyst (312-85) practice test material. Every candidate needs to prepare with actual 312-85 Questions to save time and money.

The CTIA certification is an excellent choice for professionals who want to demonstrate their expertise in threat intelligence analysis. It is a highly respected certification that is recognized by employers worldwide, and it can help professionals advance their careers and increase their earning potential.

The Certified Threat Intelligence Analyst (CTIA) certification is offered by the International Council of Electronic Commerce Consultants (EC-Council). It is specifically designed for individuals who wish to specialize in the field of threat intelligence. The CTIA certification is globally recognized, and it is an essential credential for professionals who work in the field of cybersecurity. Certified Threat Intelligence Analyst certification exam tests candidates on key concepts related to threat intelligence, including threat modeling, data collection, and analysis.

Pass 312-85 Exam with ECCouncil's Exam Questions and Achieve 100% Success on Your First Try

Our research materials will provide three different versions, the PDF version, the software version and the online version. Software version of the features are very practical, in order to meet the needs of some potential customers, we provide users with free experience, if you also choose the characteristics of practical, I think you can try to use our 312-85 test prep software version. I believe you have a different sensory experience for this version of the product. Because the software version of the product can simulate the real test environment, users can realize the effect of the atmosphere of the 312-85 Exam at home through the software version. Although this version can only run on the Windows operating system, our software version of the learning material is not limited to the number of computers installed and the number of users, the user can implement the software version on several computers. You will like the software version. Of course, you can also choose other learning mode of the 312-85 valid practice questions.

ECCouncil 312-85 (Certified Threat Intelligence Analyst) Certification Exam is ideal for professionals who want to enhance their career prospects in the cybersecurity industry. Certified Threat Intelligence Analyst certification is recognized globally and is highly valued by employers. Certified Threat Intelligence Analyst certification demonstrates the candidate's expertise in threat intelligence analysis and program development, making them a valuable asset to any organization that is seeking to improve their cybersecurity posture.

ECCouncil Certified Threat Intelligence Analyst Sample Questions (Q14-Q19):

NEW QUESTION # 14

John, a professional hacker, is trying to perform APT attack on the target organization network. He gains access to a single system of a target organization and tries to obtain administrative login credentials to gain further access to the systems in the network using various techniques.

What phase of the advanced persistent threat lifecycle is John currently in?

- A. Expansion
- B. Search and exfiltration
- C. Persistence
- D. Initial intrusion

Answer: A

NEW QUESTION # 15

Marie, a threat analyst at an organization named TechSavvy, was asked to perform operational threat intelligence analysis to get contextual information about security events and incidents.

Which of the following sources does Marie need to use to perform operational threat intelligence analysis?

- A. Activity-related attacks, social media sources, chat room conversations
- B. Attack group reports, attack campaign reports, incident reports, malware samples
- C. Malware indicators, network indicators, e-mail indicators
- D. OSINT, security industry white papers, human contacts

Answer: B

Explanation:

Operational Threat Intelligence focuses on providing actionable insights about ongoing attacks, campaigns, or threat actors. It bridges the gap between high-level strategic intelligence and low-level technical intelligence.

It includes detailed, contextual information about how and why an attack is happening, who is behind it, and what tools and tactics they are using. Analysts rely on reports and data that describe current or recent attack campaigns, group activities, and malware operations.

Typical Sources of Operational Threat Intelligence:

* Attack group reports: Identify specific threat actors, their motivations, targets, and past operations.

* Attack campaign reports: Provide information about organized and ongoing attack campaigns targeting certain sectors or

geographies.

* Incident reports: Offer real-world case studies and patterns of attacks that have already occurred.

* Malware samples: Help analysts understand malware functionality, distribution methods, and associated threat groups.

These sources provide contextual and actionable information that help operational analysts improve detection and response during active threat situations.

Why the Other Options Are Incorrect:

* B. Malware indicators, network indicators, e-mail indicators: These are sources of technical threat intelligence, which deals with atomic-level data such as IP addresses, URLs, and file hashes.

* C. Activity-related attacks, social media sources, chat room conversations: These are examples of sources used for social media or OSINT collection, not operational analysis.

* D. OSINT, security industry white papers, human contacts: These are sources used for strategic threat intelligence, focusing on long-term trends and organizational risk assessment.

Conclusion:

Operational threat intelligence relies on actionable, campaign-specific sources such as attack group reports, incident reports, and malware samples to provide detailed context for active threats.

Final Answer: A. Attack group reports, attack campaign reports, incident reports, malware samples Explanation Reference (Based on CTIA Study Concepts):

According to CTIA, operational threat intelligence provides in-depth analysis of ongoing or recent campaigns, utilizing reports and samples that describe adversary tools, targets, and motivations.

NEW QUESTION # 16

An attacker instructs bots to use camouflage mechanism to hide his phishing and malware delivery locations in the rapidly changing network of compromised bots. In this particular technique, a single domain name consists of multiple IP addresses.

Which of the following technique is used by the attacker?

- A. Dynamic DNS
- **B. Fast-Flux DNS**
- C. DNS zone transfer
- D. DNS interrogation

Answer: B

Explanation:

Fast-Flux DNS is a technique used by attackers to hide phishing and malware distribution sites behind an ever-changing network of compromised hosts acting as proxies. It involves rapidly changing the association of domain names with multiple IP addresses, making the detection and shutdown of malicious sites more difficult. This technique contrasts with DNS zone transfers, which involve the replication of DNS data across DNS servers, or Dynamic DNS, which typically involves the automatic updating of DNS records for dynamic IP addresses, but not necessarily for malicious purposes. DNS interrogation involves querying DNS servers to retrieve information about domain names, but it does not involve hiding malicious content. Fast-Flux DNS specifically refers to the rapid changes in DNS records to obfuscate the source of the malicious activity, aligning with the scenario described. References:

* SANS Institute InfoSec Reading Room

* ICANN (Internet Corporation for Assigned Names and Numbers) Security and Stability Advisory Committee

NEW QUESTION # 17

Which component of risk management involves evaluating and ranking risks based on their significance, allowing organizations to focus resources on addressing the most critical threats?

- A. Risk assessment
- B. Risk mitigation
- C. Risk identification
- **D. Risk prioritization**

Answer: D

Explanation:

Risk Prioritization is the process of evaluating and ranking identified risks based on their likelihood, potential impact, and urgency. It helps organizations allocate resources to the most significant threats first.

This step follows risk assessment and ensures that mitigation efforts are aligned with business priorities and risk appetite.

Why the Other Options Are Incorrect:

- * A. Risk identification: The initial process of recognizing potential threats or vulnerabilities.
- * C. Risk assessment: Involves analyzing the probability and impact of identified risks but does not rank them.
- * D. Risk mitigation: Focuses on implementing measures to reduce or eliminate risks after prioritization.

Conclusion:

The activity described-ranking risks by importance to determine response focus-is Risk Prioritization.

Final Answer: B. Risk prioritization

Explanation Reference (Based on CTIA Study Concepts):

CTIA identifies risk prioritization as the step that enables organizations to concentrate on the most severe risks after assessment, ensuring efficient allocation of defensive resources.

NEW QUESTION # 18

Jame, a professional hacker, is trying to hack the confidential information of a target organization. He identified the vulnerabilities in the target system and created a tailored deliverable malicious payload using an exploit and a backdoor to send it to the victim. Which of the following phases of cyber kill chain methodology is Jame executing?

- A. Weaponization
- B. Exploitation
- C. Installation
- D. Reconnaissance

Answer: A

NEW QUESTION # 19
