## Cisco Automating and Programming Cisco Collaboration Solutions Sample Questions (Q90-Q95):

### NEW QUESTION # 90

Refer to the exhibit. An engineer is using telemetry data to gather monitoring information from the network devices. During testing, the configuration worked with no issues. When it was applied to the live environment, the dial-out telemetry streams are not being

sent. Which step is missing to configure a Cisco IOS XR router for telemetry streams dial-out?

- A. destination-group activation
- B. subscription activation
- C. destination-group configuration
- D. subscription configuration

**Answer: C**

Explanation:

The configuration in the exhibit shows sensor-groups and subscriptions, but for telemetry dial-out to function, you must also configure a destination-group (to define where to send the telemetry data). The subscriptions reference the destination-group (e.g., destination-id test), but the actual destination-group configuration is missing. Without it, the router does not know where to send the telemetry data streams.

#### NEW QUESTION # 91

How does using the Python with statement in conjunction with ncclient manager improve an existing NETCONF automation script?

- A. The with statement tries to connect to the device using TCP port 830 first but also tries to connect via TCP port 22.
- B. It manages the running configuration of the device by comparing it to the new configuration applied using NETCONF.
- C. Use of the with statement catches any exceptions when trying to connect to a device using NETCONF.
- D. It allows the NETCONF connection to the device to be gracefully closed without having to explicitly code this action.

**Answer: C**

#### NEW QUESTION # 92

What are two benefits of using Cisco NSO? (Choose two.)

- A. It uses load balancing services for better traffic distribution.
- B. It easily integrates into northbound systems and APIs.
- C. It can replace the CI/CD pipeline tools.
- D. It automatically discovers all deployed services.
- E. It abstracts the device adapter and complex device logic from the service logic.

**Answer: B,E**

#### NEW QUESTION # 93

When configuring class-based WRED on Cisco routers, which WRED parameter is not user configurable on a Cisco IOS XR but is user configurable on a Cisco IOS and IOS XE?

- A. the maximum threshold
- B. the ingress or egress direction where the class-based WRED policy will be applied
- C. the minimum threshold
- D. the mark probability denominator

**Answer: D**

Explanation:

Comparison of Cisco IOS QoS and Cisco IOS-XR QoS

The Cisco IOS-XR software implementation of QoS is basically the same as the QoS implementation on Cisco IOS software, with the following exceptions:

\*On Cisco IOS-XR software, the bandwidth command can be configured only in egress policies.

\*The following changes have been made to the class-map command on Cisco IOS-XR software:

-Supports 4K per logical router.

-Maximum number of match criteria configurable in one class map is eight.

\*When a class is marked as high priority using the priority command on Cisco IOS-XR software, we recommend that you configure a policer to limit the priority traffic. Limiting the priority traffic will ensure that the priority traffic does not starve all of the other traffic on the line card. Use the police command to explicitly configure the policer.

\*On Cisco IO-XR software, only one conform-action, exceed-action, or violate-action command can be configured at a time. To configure traffic policing, use the police command.

\*On Cisco IOS-XR software, policy modifications cannot be made on existing policies. Use the policy-map command to remove the policy from all attached interfaces, delete the policy map, and redefine a new policy.

\*When configuring a policy map on Cisco IOS-XR software, the maximum number of classes configurable in one policy map is 16, which includes both Level 1 and Level 2 classes. To configure a policy map, use the policy-map command.

\*When WRED is configured on Cisco IOS-XR software, the mark probability in the random-detect command is not configurable-it is always set to 1.

\*When the random-detect exp command is used on Cisco IOS-XR software, the exponential weighting constant is not configurable and will be programmed automatically by Cisco IOS-XR software.

\*When access control lists (ACLs) are used in QoS class maps, the underlying deny or permit actions associated with access control entries (ACEs) are ignored. ACEs are used as a classification mechanism in order to provide appropriate QoS behavior as specified in class maps. Use ACLs that include ACEs with permit actions only.

#### NEW QUESTION # 94

Refer to the exhibit.

□ An automation engineer has created a RESTCONF POST to configure network devices. Which two tasks are accomplished when the code is executed? (Choose two.)

- A. If the specified configuration is already in the running configuration, the command updates this request.
- B. If the specified configuration is already in the running configuration, the command is not replaced by this request.
- C. If the specified configuration is already executed in the running configuration, the command is merged with this request.
- D. If the specified configuration is already in the running configuration, the command is replaced by this request.
- E. If the specified configuration is not on the device, the POST request creates it.

Answer: A,E
