2V0-11.25시험대비 최신 공부자료, 2V0-11.25합격보장 가능 덤프문제

Pass4Test에서는VMware 인증2V0-11.25시험대비덤프를 발췌하여 제공해드립니다. VMware 인증2V0-11.25시험대비덤프에는 시험문제의 모든 예상문제와 시험유형이 포함되어있어 시험준비자료로서 가장 좋은 선택입니다. Pass4Test에서 제공해드리는 전면적인VMware 인증2V0-11.25시험대비덤프로VMware 인증2V0-11.25시험준비공부를 해보세요. 통과율이 100%입니다.

VMware 2V0-11.25 시험요강:

주제	소개
주제 1	• IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.
주제 2	• Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network • storage design.

주제 3	• Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.
주제 4	• VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.
주제 5	• Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.

최신 VCP-VCF Administrator 2V0-11.25 무료샘플문제 (Q73-Q78):

질문 # 73
Which feature of VMware Data Services Manager enhances database security and compliance?

- A. Database-Level Authentication
- B. Automated workload migration
- C. Storage replication
- D. Network traffic optimization

정답：A

설명：
VMware Data Services Manager enhances database security and compliance by providing Database-Level Authentication, which ensures that access to databases is tightly controlled and that only authorized users can access sensitive database information. This is critical for maintaining security and compliance with industry standards and regulations.

질문 # 74
The administrator has been tasked with applying asynchronous software updates to the VMware Cloud Foundation (VCF) instance using the VMware Async Patch CLI Tool.
Which four steps would an administrator take to complete the task? (Choose four.)

- A. Download the bundles.
- B. Upload the bundles to SDDC Manager.
- C. Apply the patches through the SDDC Manager UI.
- D. Download the bundles from SDDC Manager.
- E. Apply the patches directly through the Async Patch CLI Tool.
- F. Enable the bundles.
- G. Upload the confirmation to SDDC Manager.

정답：A,B,C,F

설명：

To apply asynchronous software updates to a VMware Cloud Foundation (VCF) instance using the VMware Async Patch CLI Tool, an administrator must follow a specific sequence of steps. The VMware Async Patch CLI Tool is designed to facilitate the application of critical patches to VCF components-such as NSX Manager, vCenter Server, or ESXi-outside the standard release cycle. These patches are then integrated into the SDDC Manager for application. Based on the provided options and standard practices, the four correct steps are outlined below.

Step 1: Download the Bundles

The process begins with obtaining the necessary patch bundles. These bundles contain the asynchronous updates that need to be applied to the VCF instance. In an offline environment, the administrator downloads the bundles on a separate computer with internet access using the Async Patch CLI Tool (e.g., with a command like --download). In an online environment, the tool can download the bundles directly to the SDDC Manager. The optionB. Download the bundlesaccurately reflects this initial step, as it is a prerequisite regardless of the environment.

Step 2: Upload the Bundles to SDDC Manager

Once downloaded, the bundles must be made available to the SDDC Manager. In an offline scenario, this involves manually transferring (or uploading) the downloaded bundles from the separate computer to the SDDC Manager appliance. In an online scenario, the Async Patch CLI Tool can automate this upload to the SDDC Manager's internal Lifecycle Management (LCM) repository when enabling the patch. The optionG.

Upload the bundles to SDDC Managerrepresents this critical step, ensuring the bundles are accessible to the system.

Step 3: Enable the Bundles

With the bundles uploaded to the SDDC Manager, the administrator uses the Async Patch CLI Tool to enable the patches. This step involves running a command such as --enableAsyncPatch, which registers the patch bundles with the SDDC Manager and prepares them for application. In an online environment, this command may also handle the download and upload automatically, but since the options separate these actions, "enable" refers specifically to making the patches available within the SDDC Manager. The optionE. Enable the bundlescorresponds to this process, aligning with the tool's role in enabling patches for subsequent application.

Step 4: Apply the Patches through the SDDC Manager UI

Finally, the administrator applies the enabled patches to the VCF instance using the SDDC Manager user interface (UI). The Async Patch CLI Tool does not apply the patches directly; instead, it prepares them, and the actual application occurs through the SDDC Manager UI as part of the lifecycle management process.

This step ensures the patches are deployed to the target components in a controlled manner. The optionF.

Apply the patches through the SDDC Manager UIaccurately describes this final action.

Why Not the Other Options?

A). Download the bundles from SDDC Manager: This is incorrect because bundles are typically downloaded from an external source (e.g., VMware's repository) to the SDDC Manager, not the other way around.

C). Upload the confirmation to SDDC Manager: There is no standard process involving "uploading a confirmation" in the async patching workflow, making this option irrelevant.

D). Apply the patches directly through the Async Patch CLI Tool: This is incorrect, as the tool only enables patches; the application is performed via the SDDC Manager UI.

Conclusion

The four steps an administrator would take to apply asynchronous software updates using the VMware Async Patch CLI Tool are:

B). Download the bundles

G). Upload the bundles to SDDC Manager

E). Enable the bundles

F). Apply the patches through the SDDC Manager UI

These steps provide a complete and logical sequence for successfully patching a VCF instance with the Async Patch CLI Tool.

질문 # 75
An organization requires granular control over vCenter permissions and they need to assign roles to specific user groups.
Which three steps must be followed to assign roles to users or groups in vCenter? (Choose three.)

- A. Choose 'Add Permission' from the context menu.
- B. Manually add each user to the role.
- C. Navigate to the vSphere Client and choose the object for which they want to assign permissions.
- D. Choose the role to assign from the predefined list of roles.
- E. Assign the role to a user or group from the identity source.

정답： A,C,D

설명：
To assign roles to users or groups in vCenter, you first need to navigate to the vSphere Client and select the object (such as a datacenter, cluster, or host) where the permissions will be applied.
After selecting the object, you use the 'Add Permission' option from the context menu to start the process of assigning permissions.

You then select the role you want to assign, which will be from the predefined list of roles in vCenter. These roles define the level of access for the user or group.

질문 # 76

While preparing to enable Application Virtual Networks (AVNs) and deploying Aria Suite components, an administrator plans to deploy an NSX Edge cluster.

What is a requirement for deploying the NSX Edge cluster?

- A. The Edge transport nodes must be configured with an MTU of 1500.
- B. The Edge cluster must be configured for NSX Federation.
- C. The Edge transport nodes must be deployed using the 'large' form factor.
- D. The Edge cluster must be deployed in the management domain.

정답：D

설명：

When deploying an NSX Edge cluster in a VMware Cloud Foundation (VCF) environment, it must be deployed in the management domain. The management domain is responsible for managing and orchestrating various resources, including the NSX Edge cluster, which is crucial for network virtualization and security within the environment.

질문 # 77

Which feature of VMware Data Services Manager enhances security and compliance?

- A. Automated workload migration
- B. Storage replication
- C. Network traffic encryption
- D. Database level authentication

정답：D

설명：

VMware Data Services Manager™ offers modern database and data services management for vSphere. It is a solution that provides a data-as-a-service toolkit for on-demand provisioning and automated management of PostgreSQL and MySQL databases in vSphere environment. https://techdocs.broadcom.com/us/en/vmware-cis/dsm/data-services-manager/2-1/about-vmware-data-services-manager.html
