

Web-based NSE5_SSE_AD-7.6 Practice Test With Dumps

TrainingDumps is a platform that will provide candidates with most effective NSE5_SSE_AD-7.6 study materials to help them pass their exam. It has been recognized by all of our customers, because it was compiled by many professional experts of our website. Not only did they pass their exam but also got a satisfactory score. These are due to the high quality of our NSE5_SSE_AD-7.6 study torrent that leads to such a high pass rate.

Fortinet NSE5_SSE_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Analytics: This domain covers analyzing SD-WAN and FortiSASE logs to monitor traffic behavior, identify security threats, and generate reports.
Topic 2	<ul style="list-style-type: none">Decentralized SD-WAN: This domain covers basic SD-WAN implementation including configuring members, zones, and performance SLAs to monitor network quality.
Topic 3	<ul style="list-style-type: none">SASE Deployment: This domain covers FortiSASE administration settings, user onboarding methods, and integration with SD-WAN infrastructure.
Topic 4	<ul style="list-style-type: none">Rules and Routing: This section addresses configuring SD-WAN rules and routing policies to control and direct traffic flow across different links.
Topic 5	<ul style="list-style-type: none">Secure Internet Access (SIA) and Secure SaaS Access (SSA): This section focuses on implementing security profiles for content inspection and deploying compliance rules to managed endpoints.

100% Pass Quiz Fortinet - Perfect Valid Test NSE5_SSE_AD-7.6 Vce Free

You don't need to worry about wasting your precious time but failing to get the NSE5_SSE_AD-7.6 certification. Many people

have used our NSE5_SSE_AD-7.6 study materials and the pass rate of the exam is 99%. If any incident happens and you don't pass the NSE5_SSE_AD-7.6 exam, we will give you a full refund. Our sincerity stems from the good quality of our products. We will give you one year's free update of the exam study materials you purchase and 24/7 online service. Now just make up your mind and get your NSE5_SSE_AD-7.6 Exam Torrent!

Fortinet NSE 5 - FortiSASE and SD-WAN 7.6 Core Administrator Sample Questions (Q22-Q27):

NEW QUESTION # 22

Which two statements about configuring a steering bypass destination in FortiSASE are correct? (Choose two.)

- A. You can select from four destination types: Infrastructure, FQDN, Local Application, or Subnet
- B. Subnet is the only destination type that supports the Apply condition
- C. Apply condition can be set only to On-net or Off-net. but not both
- D. Apply condition allows split tunneling destinations to be applied to On-net, off-net, or both types of endpoints

Answer: A,D

Explanation:

According to the FortiSASE 7.6 Feature Administration Guide, steering bypass destinations (also known as split tunneling) allow administrators to optimize bandwidth by redirecting specific trusted traffic away from the SASE tunnel to the endpoint's local physical interface.

* Destination Types (Option C): When creating a bypass destination, administrators can select from four distinct types: Infrastructure (pre-defined apps like Zoom/O365), FQDN (specific domains), Local Application (identifying processes on the laptop), or Subnet (specific IP ranges).

* Apply Condition (Option B): The "Apply" condition is a flexible setting that allows the administrator to choose when the bypass is active. It can be applied to endpoints that are On-net (inside the office), Off-net (remote), or Both. This ensures that if a user is in the office, they don't use the SASE tunnel for local resources, but if they are home, they might still bypass high-bandwidth sites like YouTube to preserve tunnel capacity.

Why other options are incorrect:

* Option A: Subnet is one of four types and is not the only type supporting these conditions.

* Option D: The system explicitly supports "Both" to ensure consistency across network transitions.

NEW QUESTION # 23

You want FortiGate to use SD-WAN rules to steer ping local-out traffic. Which two constraints should you consider? (Choose two.)

- A. By default, FortiGate uses SD-WAN rules only for local-out traffic that corresponds to ping and traceroute.
- B. You must configure each local-out feature individually to use SD-WAN.
- C. By default, FortiGate uses SD-WAN rules only for local-out traffic that corresponds to ping and traceroute.
- D. You can steer local-out traffic only with SD-WAN rules that use the manual strategy.

Answer: B,C

Explanation:

In the SD-WAN 7.6 Core Administrator curriculum, steering "local-out" traffic (traffic generated by the FortiGate itself, such as DNS queries, FortiGuard updates, or diagnostic pings) requires specific configuration because this traffic follows a different path than "forward" traffic.

* Individual Configuration (Option A): By default, local-out traffic bypasses the SD-WAN engine and uses the standard system routing table (RIB/FIB). To use SD-WAN rules for specific features like DNS or RADIUS, you must individually enable the sdwan interface-select-method within that feature's configuration (e.g., config system dns or config user radius).

* Default Steerable Traffic (Option B): In FortiOS 7.6, while most local-out traffic is excluded from SD-WAN by default, the system is designed so that when SD-WAN is active, it primarily considers SD-WAN rules for specific diagnostic local-out traffic: specifically ping and traceroute—to allow administrators to verify path quality using the same logic as user traffic.

Why other options are incorrect:

* Option C: Local-out traffic can be steered using any SD-WAN strategy (Manual, Best Quality, etc.), provided the interface-selection-method is set to sdwan.

NEW QUESTION # 24

How does the FortiSASE security dashboard facilitate vulnerability management for FortiClient endpoints?

(Choose one answer)

- A. It displays only critical vulnerabilities, requires manual patching for all endpoints, and does not allow viewing of affected endpoints.
- **B. It provides a vulnerability summary, identifies affected endpoints, and supports automatic patching for eligible vulnerabilities.**
- C. It automatically patches all vulnerabilities without user intervention and does not categorize vulnerabilities by severity.
- D. It shows vulnerabilities only for applications and requires endpoint users to manually check for affected endpoints.

Answer: B

Explanation:

According to the FortiSASE 7.6 Administration Guide and the FCP - FortiSASE 24/25 Administrator training materials, the security dashboard is a centralized hub for monitoring and remediating security risks across the entire fleet of managed endpoints.

* **Vulnerability Summary:** The dashboard includes a dedicated Vulnerability summary widget that categorizes risks by severity (Critical, High, Medium, Low) and by application type (OS, Web Client, etc.).

* **Identifying Affected Endpoints:** The dashboard is fully interactive; an administrator can drill down into specific vulnerability categories to view a detailed list of CVE data and, most importantly, identify the specific affected endpoints that require attention.

* **Automatic Patching:** FortiSASE supports automatic patching for eligible vulnerabilities (such as common third-party applications and supported OS updates). This feature is configured within the Endpoint Profile, allowing the FortiClient agent to remediate risks without requiring the user to manually run updates.

Why other options are incorrect:

* **Option A:** While it supports automatic patching, it does not do so for all vulnerabilities (only eligible/supported ones), and it specifically does categorize them by severity.

* **Option B:** The dashboard shows vulnerabilities for the Operating System as well as applications, and it allows the administrator to identify affected endpoints rather than requiring the end-user to check.

* **Option C:** The dashboard displays all levels of severity (not just critical) and explicitly allows the viewing of affected endpoints.

NEW QUESTION # 25

Which statement about security posture tags in FortiSASE is correct?

- A. Multiple tags can be assigned to an endpoint, but only one is used for evaluation.
- B. Tags are static and do not change with endpoint status.
- **C. Multiple tags can be assigned to an endpoint and used for evaluation.**
- D. Only one tag can be assigned to an endpoint.

Answer: C

Explanation:

According to the FortiSASE 7.6 Administration Guide and FCP - FortiSASE 24/25 Administrator curriculum, security posture tags (often referred to as ZTNA tags) are the fundamental building blocks for identity-based and posture-based access control.

* **Multiple Tag Assignment:** A single endpoint can be assigned multiple tags at the same time. For example, an endpoint might simultaneously have the tags "OS-Windows-11", "AV-Running", and "Corporate-Domain-Joined".

* **Evaluation Logic:** During the policy evaluation process (for both SIA and SPA), FortiSASE or the FortiGate hub considers all tags assigned to the endpoint. Security policies can be configured to use these tags as source criteria. If an administrator defines a policy that requires both "AV-Running" and

"Corporate-Domain-Joined," the system evaluates both tags to decide whether to permit the traffic.

* **Dynamic Nature:** Contrary to Option C, these tags are highly dynamic. They are automatically applied or removed in real-time based on the telemetry data sent by the FortiClient to the SASE cloud. If a user disables their antivirus, the "AV-Running" tag is removed immediately, and the endpoint's access is revoked by the next policy evaluation.

* **Scalability:** While the system supports many tags, documentation recommends a baseline of custom tags for optimal performance, though it confirms that multiple tags are standard for reflecting a comprehensive security posture.

Why other options are incorrect:

* **Option A:** This is incorrect because the system does not pick just one tag; it evaluates the collection of tags against the policy's requirements (e.g., matching any or matching all).

* **Option C:** This is incorrect because tags are dynamic and change as soon as the endpoint's status (like vulnerability count or software presence) changes.

* Option D: This is incorrect because the architectural advantage of ZTNA is the ability to layer multiple security "checks" (tags) for a single user.

NEW QUESTION # 26

How is the Geofencing feature used in FortiSASE? (Choose one answer)

- A. To restrict access to applications based on the time of day in specific countries.
- **B. To allow or block remote user connections to FortiSASE POPs from specific countries.**
- C. To encrypt data at rest on mobile devices in specific countries.
- D. To monitor user behavior on websites and block non-work-related content from specific countries

Answer: B

NEW QUESTION # 27

.....

Do you want to pass NSE5_SSE_AD-7.6 exam and get the related certification within the minimum time and effort? If you would like to give me a positive answer, you really should keep a close eye on our website since you can find the best NSE5_SSE_AD-7.6 study material in here--our NSE5_SSE_AD-7.6 Training Materials. We have helped millions of thousands of candidates to prepare for the NSE5_SSE_AD-7.6 exam and all of them have got a fruitful outcome, we believe you will be the next winner as long as you join in us!
