NEW QUESTION # 99

With multiple CI data sources, which choice is the best for determining which source can update a CI attribute?

- A. Data Certification
- B. Reconciliation Rules
- C. Business Rules
- D. Transform Maps

Answer: B

NEW QUESTION # 100

In a discovery pattern, which types are available with CI Attributes in the Pattern Designer? (Choose two.)

- A. Main pattern CI type
- B. All CI types
- C. Global CI types
- D. Related CI types

Answer: A,D

Explanation:

In a discovery pattern, CI Attributes are the fields that store the information about the configuration items (CIs) that are discovered by the pattern. The Pattern Designer is a graphical interface that allows users to create and edit patterns using drag-and-drop operations. In the Pattern Designer, there are two types of CI Attributes that are available: Main pattern CI type and Related CI types. The Main pattern CI type is the CI type that the pattern is designed to discover, such as Windows Server, Linux Server, or Database. The Related CI types are the CI types that are related to the main CI type, such as IP Address, Network Adapter, or Software Installation. Users can select the CI Attributes from these types to populate the CMDB tables with the data collected by the pattern.
