

Reliable EMC D-PVM-OE-01 Exam Prep | D-PVM-OE-01 Latest Demo

Module - 1 :> Single Variable Differential calculus ①

of a function

Limits :-

A function said to have a limit 'l' as $x \rightarrow a$ written as $\lim_{x \rightarrow a} f(x) = l$, if $\forall \epsilon > 0$, however small, there exists $\delta > 0$ such that $|f(x) - l| < \epsilon \quad \forall 0 < |x - a| < \delta$

* Continuous function :-

A function $f(x)$ is said to be continuous at a point $x = a$, if $\lim_{x \rightarrow a} f(x) = f(a)$

* Differentiable function :-

A function $f(x)$ is said to be differentiable at $x = a$, if $\lim_{x \rightarrow a} \frac{f(x) - f(a)}{x - a}$ exists and is unique

Three versions for D-PVM-OE-01 exam cram are available, and you can choose the most suitable one according to your own needs. D-PVM-OE-01 Online test engine supports all web browsers, and you can also have offline practice. One of the most outstanding features of D-PVM-OE-01 Online test engine is that it has testing history and performance review, and you can have a general review of what you have learnt through this version. D-PVM-OE-01 Soft test engine supports MS operating system as well as stimulates real exam environment, therefore it can build up your confidence. D-PVM-OE-01 PDF version is printable, and you can study anytime.

It is easy for you to pass the exam because you only need 20-30 hours to learn and prepare for the exam. You may worry there is little time for you to learn the D-PVM-OE-01 Study Tool and prepare the exam because you have spent your main time and energy on your most important thing such as the job and the learning and can't spare too much time to learn. But if you buy our Dell Technologies PowerMax Operate test torrent you only need 1-2 hours to learn and prepare the exam and focus your main attention on your most important thing.

The Channel Partner Program Dell Technologies PowerMax Operate D-PVM-OE-01 certification is a valuable credential earned

by individuals to validate their skills and competence to perform certain job tasks. Your Dell Technologies PowerMax Operate D-PVM-OE-01 Certification is usually displayed as proof that you've been trained, educated, and prepared to meet the specific requirement for your professional role.

EMC Dell Technologies PowerMax Operate Sample Questions (Q11-Q16):

NEW QUESTION # 11

A systems administrator has decommissioned a host with two devices allocated to it. What must the administrator do prior to deleting the devices?

- A. Remove the Storage Group
- B. Delete the Initiators
- C. Unmap from the front-end ports
- D. Remove the device attribute

Answer: A

NEW QUESTION # 12

A company is setting up a multi-tenant environment where multiple departments share the same storage array with SID 1762. The IT department requires 2 TB of storage to be available on the ESXi1 host. Use "ESXi1_SG" for the storage group name, create a port group with Dir- Ports "OR-1C:0 and OR-2C:0," and leave all other settings at their default.

Using the simulator, provision the storage required with a single volume using auto-provisioning groups.

Answer:

Explanation:

See the explanation for step by step solution.

Explanation:

We need to provision 2 TB of storage to the ESXi1 host on a PowerMax array (SID 1762) using Unisphere, in a multi-tenant environment. We'll use auto-provisioning with the following specifics:

- * Storage Group Name:ESXi1_SG
- * Port Group:(A new port group with Directors OR-1C:0 and OR-2C:0)
- * Volume Size:2 TB (single volume)
- * Other Settings:Default

Here are the step-by-step instructions, tailored for the Unisphere simulator as described in the question:

Steps:

1. Launch the Simulator and Navigate to Storage Groups
 - * Open Unisphere for PowerMax in your web browser.
 - * You should already be logged in to the simulator, with the PowerMax array with SID 1762.
 - * In the left-hand navigation pane, click on Storage>Storage Groups.
2. Initiate Storage Group Creation
 - * Click the Create button (likely a plus "+" icon) in the Storage Groups section to start the Create Storage Group wizard.
 - 3. Name the Storage Group
 - * In the "Create Storage Group" wizard:
 - * Storage Group Name:Enter ESXi1_SG.
 - * Enable FAST/Service Level:Do not check this option, as we are leaving all other settings at their default.
 - * Click Next or Continue(the exact wording might vary).
 - 4. Add Volumes
 - * Ensure "Create new volumes" is selected.
 - * Number of Volumes:Enter 1.
 - * Volume Size:
 - * Enter 2.
 - * Select TB from the dropdown for the unit.
 - * Click Next.
 - 5. Create the Port Group
 - * You should now be on the "Connectivity" or "Host" step, where you will add a new port group.
 - * Select "Create Port Group"
 - * Port Group Name:Give the new port group a name. You can use something descriptive like

"ESXi1_PG," or any name that follows your organization's naming conventions.

* Select Ports:

* Find and select the following Directors and ports from the list of available ports:

* OR-1C:0

* OR-2C:0

* Note: The simulator may not allow you to highlight the exact director ports as in a production environment. It will likely display all directors and ports under the selected array. Just ensure they are selected as part of the port group.

* ClickNext.

6. Add host to the Masking View

* Select "Add Host"

* Select "Create New Host"

* Host Name:ESXi1

* Initiators: You don't have specific initiators to add in this simulation, so you can skip this part or add any from the available options. This is because we are working within a simulated environment.

* ClickNext

7. Review and Create

* You'll be presented with a summary page that shows:

* Storage Group: ESXi1_SG

* Volume: 1 x 2 TB volume

* Port Group: (The new port group you created with OR-1C:0 and OR-2C:0)

* Host: ESXi1

* Carefully review all the settings to make sure they are correct.

* Click Run Now or Finish (or similar wording) to create the storage group, volume, port group, and masking view.

8. Verification (Optional)

* After the operation completes, you can verify the results:

* Go back to the Storage Groups list. You should see the ESXi1_SG storage group.

* Click on ESXi1_SG to view its details. You should see the 2 TB volume and the associated host (ESXi1) and port group.

* You can also navigate to Hosts > Port Groups to verify that the new port group was created correctly.

* Finally, you can navigate to Hosts > Masking Views to verify that a masking view was created correctly.

NEW QUESTION # 13

A PowerMax administrator is provisioning their environment using Solutions Enabler 9.0 and Unisphere for PowerMax. Two large Storage Resource Pools (SRPs) have been configured for virtual provisioning. The pools are setup with RAID 5 (7+1) TDATs and there are no errors. The administrator is able to fully access and browse each pool's elements and decided to make some modifications to the pools. However, they are unable to edit or make any changes to the pool attributes. What is the most likely reason for this issue?

- A. One of the SRPs is not configured as the default SRP
- B. Pool modification is restricted to only Dell Technologies personnel
- C. An unsupported version of Solutions Enabler was used
- D. An unsupported version of Unisphere for PowerMax was used

Answer: B

NEW QUESTION # 14

What is the maximum size that can be created for externally visible devices in PowerMax and VMAX Family arrays?

- A. 64 TB
- B. 128 TB
- C. 256 TB
- D. 32 TB

Answer: A

NEW QUESTION # 15

What does the `symcfg discover` command do when upgrading Solutions Enabler on a Linux host1?

- A. Builds the SYMAPI database
- B. Creates backups of the configuration directories
- C. **Identifies the running SE version**
- D. Verifies that the SE daemons have been stopped

Answer: C

Explanation:

Step by Step Comprehensive Detailed Explanation:

When upgrading Solutions Enabler (SE) on a Linux host, the symcfg discover command plays a crucial role in preparing for the upgrade. Its primary function in this context is to:

* Identify the running SE version: Before proceeding with the upgrade, it's essential to know the current version of Solutions Enabler installed on the host. The symcfg discover command gathers information about the existing SE environment, including the version number. This information is used to determine the appropriate upgrade path and ensure compatibility.

Why other options are incorrect:

* B. Verifies that the SE daemons have been stopped: While stopping SE daemons is a necessary step before the upgrade, it's not the function of the symcfg discover command.

* C. Builds the SYMAPI database: The SYMAPI database is typically built during the initial installation or after a fresh discovery.

* D. Creates backups of the configuration directories: Backups are important, but they are usually handled separately as part of the upgrade process, not by the symcfg discover command itself.

References and documents of Dell's public documentation for PowerMax Operate v.2:

* Dell Solutions Enabler 10.0.0 Installation Guide: This guide provides detailed instructions for upgrading Solutions Enabler on different operating systems, including Linux. It explains the steps involved and the role of the symcfg discover command in the upgrade process. You can find this document on the Dell Support website by searching for "Solutions Enabler Installation Guide."

NEW QUESTION # 16
