Itexamdump는 고품질의 IT SAP C-ACDET-2506시험공부자료를 제공하는 차별화 된 사이트입니다. Itexamdump는 SAP C-ACDET-2506응시자들이 처음 시도하는SAP C-ACDET-2506시험에서의 합격을 도와드립니다. 가장 적은 시간은 투자하여 어려운SAP C-ACDET-2506시험을 통과하여 자격증을 많이 취득하셔서 IT업계에서 자신만의 가치를 찾으세요.

SAP C-ACDET-2506 시험요강:

주제	소개
주제 1	• Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.
주제 2	• Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.

주제 3	Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.

C-ACDET-2506최고품질 시험대비자료 최신 시험덤프자료

Itexamdump의 SAP인증 C-ACDET-2506덤프를 선택하여SAP인증 C-ACDET-2506시험공부를 하는건 제일 현명한 선택입니다. 시험에서 떨어지면 덤프비용 전액을 환불처리해드리고SAP인증 C-ACDET-2506시험이 바뀌면 덤프도 업데이트하여 고객님의게 최신버전을 발송해드립니다. SAP인증 C-ACDET-2506덤프뿐만 아니라 IT인증시험에 관한 모든 덤프를 제공해드립니다.

최신 SAP Certified Associate C-ACDET-2506 무료샘플문제 (Q58-Q63):

질문 # 58

When preparing to load legacy contracts during a Bluefield deployment in SAP Ariba Contracts, which of the following actions are required to ensure a successful migration?

- A. Skip the legacy contract upload step if the Production site already contains migrated Flex Master Data Templates.
- **B. Use the exact same process and tools as used in the Greenfield migration scenario to upload legacy contracts.**
- C. Manually enter legacy contract data into SAP Ariba Contracts using the application's UI instead of using import tools.
- D. Create a new customized contract upload process specifically for Bluefield deployments to accommodate differences in site structure.

정답: B

설명:

In Bluefield deployments, the legacy contract migration process is the same as in Greenfield deployments.

The standard approach uses SAP Ariba's import tools to upload contract data in bulk; no special new processes are needed.

Manual entry via UI is inefficient and error-prone. Also, existing Flex Master Data Templates do not negate the need to migrate legacy contract data.

Following the established Greenfield procedures ensures data consistency and alignment with configured templates and workflows in the target environment. This includes exporting contract data from legacy systems, validating, transforming as needed, and importing through the Production UI under contract management.

This standardization simplifies migrations across different deployment scenarios.

질문 # 59

How can you define default values on fields?

- A. Default values must be manually entered by the user
- B. Set only for Constant values
- C. Default values are not permitted
- **D. Set as Constants or Expressions based on other field values**

정답: D

설명:

SAP Ariba allows you to define default values for fields either as static Constants or as dynamic Expressions based on other field values. Expressions use the Ariba expression language, supporting logical comparisons and operators to calculate defaults dynamically during data entry. This enables tailored defaulting logic that adapts to form context or user input. Default values are applied automatically by the system; users do not have to enter them manually unless they override the defaults. This flexibility improves data accuracy and user experience.

질문 # 60

The customer wants to have a field to hold Contract Storage Locations and the address. Those locations are loaded from an external system, and the user should be able to search for storage locations. What should be used to hold the valid storage locations?

- A. Create a new field of type Date, where each date entry is tied to a unique Storage Location and its corresponding address, allowing users to select locations based on historical data entries.
- B. You should load a new Enumeration Type and call it Storage Location and load the location addresses. Create a new field of type Enumeration with a custom filter to only Enumerations of type show Storage Locations.
- C. Create a new field of type Text, with a custom Validation where the available Storage Locations are listed.
- D. You should create a new Flex Master Data (FMD) Template with appropriate attributes and call it Storage Location. Once the template is published and sample data loaded, you can create a custom field and select the type Storage Location

정답: D

질문 # 61

Which of the following is NOT mentioned as a configuration type migrated by the Intelligent Configuration Manager?

- A. Template - project templates such as Contract templates
- B. AMLExtension - AML customizations such as custom fields
- C. DynamicForm - custom form templates (dForms)
- D. SupplierContact - contacts for the suppliers

정답: D

질문 # 62

You want to apply a preset filter to a custom field so that it only shows valid values based on the value of another field. What do you use to apply predefined filter criteria for a field?

- A. Enable field property "Enable for Template Field Setter" in the Advanced tab
- B. Enable field property "Use relationship chooser" in the Advanced tab
- C. Load Relation types and Relation entries
- D. Populate the "Relation Name" and "NameTableConstraintFieldPath" in the Advanced tab
- E. Define a Visibility Condition in the Conditions tab

정답: D

질문 # 63
