A Solutions Architect is designing a routing solution for a branch office. The office has a core switch that needs to be configured to route between the local user VLAN (VLAN 10) and a server VLAN (VLAN
20). Additionally, all traffic destined for the internet must be forwarded to a primary firewall at
10.255.255.1. For redundancy, a secondary, floating static route should be configured to forward traffic to a backup firewall at

Initial State:
* The switch is in its factory default state, connected via the console.
* VLANs 10 and 20 are already created.
Required Configuration:
* Enable IP routing on the switch.
* Configure an SVI for VLAN 10 with IP address 192.168.10.1/24.
* Configure an SVI for VLAN 20 with IP address 192.168.20.1/24.
