

New American Society of Microbiology ABMM Exam Answers & ABMM Complete Exam Dumps

Microbiology 2025 Lecture Syllabus Summer 2018
Microbiology: A Systems Approach, 8th Ed., Stephen Sauer, 2012
Ch1: The Main Themes of Microbiology
Ch2: The Chemistry of Biology
Ch4: Prokaryotic Protein: the Bacteria and Archaea
Exam: Ch: 1, 2, & 4
Ch5: Eukaryotic Cells and Microorganisms
Ch6: An Introduction to the Viruses
Ch7: Microbial Nutrition, Growth, and Survival
Exam: Ch: 5, 6, & 7
Ch11: Physical and Chemical Control of Microbes
Ch12: Drugs, Biologics, Host: The Elements of Chemotherapy
Ch13: Host-Microbe Interactions: Infection and Disease
Exam: Ch: 11, 12, & 13
Ch14: Host Defenses 1: Overview & Non-specific Defenses
Ch16: HIV/AIDS (pp 488-518)
Ch22: Infectious Diseases Affecting the Gastrointestinal Tract
Ch23: Infectious Diseases Affecting the Respiratory System
Final Exam: Ch: 14, 16, 22, & 23
*There is <u>no</u> comprehensive Final

ABMM Complete Exam Dumps - ABMM Valid Dumps

If you want to get ABMM certification and get hired immediately, you've come to the right place. BootcampPDF offers you the best exam dump for ABMM certification. With the guidance of no less than seasoned ABMM professionals, we have formulated updated actual questions for ABMM Certified exams, over the years. To keep our questions up to date, we constantly review and revise them to be at par with the latest ABMM syllabus for ABMM certification.

American Society of Microbiology ABMM Sample Questions (Q122-Q127):

NEW QUESTION # 122

A patient with HIV infection and a CD4+ T-cell count of 30 cells/ μ L develops progressive multifocal leukoencephalopathy (PML). The causative agent of PML is:

- A. Epstein-Barr virus (EBV)
- B. Human herpesvirus 6 (HHV-6)
- C. JC virus (JCV)
- D. Cytomegalovirus (CMV)

Answer: C

NEW QUESTION # 123

A patient with a history of liver transplantation develops a bloodstream infection with a Gram-negative bacterium. The isolate is identified as *Sphingomonas paucimobilis*. This opportunistic pathogen is known for its ability to:

- A. Form biofilms on indwelling catheters and prosthetic devices.
- B. Produce potent exotoxins that directly damage host tissues.
- C. Exhibit intrinsic resistance to a broad spectrum of antibiotics.
- D. Degrade a wide range of environmental pollutants.

Answer: C

NEW QUESTION # 124

The human virome, the collection of viruses that reside in and on the human body, is increasingly recognized for its role in health and disease. Which of the following statements regarding the human virome is MOST accurate?

- A. Bacteriophages, viruses that infect bacteria, are a significant component of the human gut virome.
- B. The human virome is primarily composed of pathogenic viruses that cause acute infections.
- C. The composition of the human virome is relatively stable over time and is not influenced by environmental factors.
- D. The human virome is largely independent of the host's immune status.

Answer: A

NEW QUESTION # 125

A patient with a history of inflammatory bowel disease is diagnosed with primary sclerosing cholangitis and undergoes liver transplantation. Post-transplant, they develop a bloodstream infection with a Gram-negative bacterium that is identified as *Fusobacterium nucleatum*. This organism's role in the pathogenesis of colorectal cancer is primarily attributed to its ability to:

- A. Directly induce mutations in colonic epithelial cells.
- B. Modulate the host immune response and promote a pro-inflammatory microenvironment.
- C. Form biofilms that physically obstruct the bile ducts.
- D. Produce potent exotoxins that damage the intestinal epithelium.

Answer: B

NEW QUESTION # 126

What is the most appropriate method for sterilizing a heat-labile liquid solution containing essential proteins for use in tissue culture?

- A. Filtration through a 0.22 μ m pore size membrane filter
- B. Irradiation with ultraviolet (UV) light
- C. Autoclaving at 121°C for 15 minutes
- D. Exposure to ethylene oxide gas

Answer: A
