If you prepare with our Critical Care Nursing Exam CCRN-Pediatric Actual Dumps, we ensure that you will become capable to crack the Critical Care Nursing Exam CCRN-Pediatric test within a few days. The Critical Care Nursing Exam CCRN-Pediatric price is affordable.

AACN Critical Care Nursing Exam Sample Questions (Q115-Q120):

NEW QUESTION # 115

A mother of a child with heart failure questions the necessity of weighing the baby everyday. The nurse's best response should be guided by the fact that the daily weight is essential in determining:

- A. success of treatment
- B. nutritional status
- C. dosage of medication
- D. **fluid retention**

Answer: D

Explanation:

Explanation: Retention of fluid is reflected by excessive weight gain in just a short period of time.

Insufficient cardiac output lowers flow to the kidneys that leads to intracellular fluid increase and hypervolemia. Weight gain or loss due to nutrition is gradual. Dosage of medication is not recalculated everyday based on weight gain.

NEW QUESTION # 116

A nurse conducts teaching among adolescents about STD's. One of the Participants asks about any early sign or symptom of Syphilis. The nurse should state that it is:

- A. rashes on genitals
- B. **lesion on genitals**
- C. difficulty in urination
- D. pus on genitals

Answer: B

Explanation:

Explanation: Lesion on genitals is the earliest sign of syphilis. During a dark-field exam of the scraping will reveal the causative agent - *Treponema pallidum*.

NEW QUESTION # 117

A nursing practice council is reviewing a protocol for flushing unused IV lines. A team member questions the use of saline vs. dextrose. What should the council do first?

- A. Develop research methods
- B. **Determine the problem**
- C. Identify the outcomes
- D. Plan interventions

Answer: B

Explanation:

The first step in any evidence-based practice (EBP) or quality improvement (QI) process is to clearly define the clinical problem or question. Before outcomes or interventions are addressed, the council must determine the exact issue to be studied.

"In quality improvement and evidence-based practice, step one is always problem identification. A well-defined problem leads to targeted and effective research." (Referenced from CCRN Pediatric - Professional Caring and Ethical Practice: Evidence-Based Practice and QI Models)

NEW QUESTION # 118

A 1-month-old presents with a 3-day history of fever, nausea, and vomiting. On assessment:

- * Pink, warm, dry skin
- * Slightly sunken fontanel
- * BP: 80/40
- * HR: 120
- * RR: 42

Which of the following changes indicate deterioration?

- A. **Hypoventilation and decreased level of consciousness**
- B. Hyperventilation and decreased level of consciousness
- C. Hyperventilation and increased BP
- D. Hypoventilation and increased BP

Answer: A

Explanation:

In neonates and young infants, hypoventilation and decreased level of consciousness (LOC) are late and critical signs

of decompensation in systemic infection or shock. A progression from normal respiratory rate to hypoventilation, especially with altered LOC, indicates impending respiratory failure or septic shock.

"Hypoventilation and changes in mental status (such as lethargy or decreased LOC) are indicators of deterioration in infants with sepsis or dehydration. Immediate intervention is required to prevent arrest." (Referenced from CCRN Pediatric - Direct Care: Multisystem, Pediatric Sepsis and Deterioration Cues)

NEW QUESTION # 119

A 6-year-old child is admitted following ingestion of an unidentified substance. Assessment reveals:

- * BP: 120/84
- * HR: 190
- * RR: 44
- * ECG: Sinus rhythm with occasional PVCs
- * Dilated pupils
- * Dry mucous membranes
- * Disorientation
- * Urinary retention

These findings are consistent with ingestion of:

- A. Chlorpromazine (Thorazine)
- B. Digoxin (Lanoxin)
- **C. Amitriptyline (Elavil)**
- D. Acetaminophen (Tylenol)

Answer: C

Explanation:

The described symptoms indicate anticholinergic toxicity, which is classically associated with tricyclic antidepressant (TCA) overdose. Amitriptyline, a TCA, causes anticholinergic symptoms: tachycardia, dilated pupils, dry mucosa, urinary retention, altered mental status, and PVCs on ECG.

"TCA toxicity presents with anticholinergic signs-dry mouth, mydriasis, tachycardia, neurologic changes, and cardiac conduction abnormalities. Amitriptyline overdose is life-threatening and requires immediate supportive care and cardiac monitoring." (Referenced from CCRN Pediatric - Direct Care: Neurological Emergencies and Toxicology)

NEW QUESTION # 120

.....

The study material is available in three formats, i.e. PDF format, web-based practice exam, and desktop practice test software. The PDF format is easy for those who always have their smart devices and love to study from them. Users can also make notes of printed PDF AACN Critical Care Nursing Exam certification exam so they can study them anywhere to pass AACN CCRN-Pediatric Certification test with a good score.
