

# Free PDF 2026 Juniper JN0-336: Security, Specialist (JNCIS-SEC) Pass-Sure Free Download Pdf

P.S. Free 2025 Juniper JN0-336 dumps are available on Google Drive shared by ExamsReviews: <https://drive.google.com/open?id=1evlpLjwcwMYjoIeLTZrlqbAHo7nvqdzH>

It is not hard to find that there are many different kinds of products in the education market now. It may be difficult for users to determine the best way to fit in the complex choices. We can tell you with confidence that the JN0-336 practice materials are superior in all respects to similar products. First, users can have a free trial of JN0-336 test prep, to help users better understand the JN0-336 Study Guide. If the user discovers that the product is not appropriate for him, the user can choose another type of learning material. Respect the user's choice, will not impose the user must purchase the JN0-336 practice materials. We can meet all the requirements of the user as much as possible, to help users better pass the qualifying exams.

This society is ever – changing and the test content will change with the change of society. You don't have to worry that our JN0-336 study materials will be out of date. In order to keep up with the change direction of the exam, our question bank has been constantly updated. We have dedicated IT staff that checks for updates every day and sends them to you automatically once they occur. The update for our JN0-336 Study Materials will be free for one year and half price concession will be offered one year later.

## Updated Juniper JN0-336 Exam Questions in PDF Format for Quick Preparation

You don't have to spend all your energy to the exam because our JN0-336 learning questions are very efficient. Only should you spend a little time practicing them can you pass the exam successfully. In addition, the passing rate of our JN0-336 Study Materials is very high, and we are very confident to ensure your success. And we can claim that our JN0-336 exam braindumps will help you pass the exam if you study with our JN0-336 practice engine.

## Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q46-Q51):

### NEW QUESTION # 46

Which method does the IoT Security feature use to identify traffic sourced from IoT devices?

- A. The SRX Series device streams transit traffic received from the IoT device to Juniper ATP Cloud.
- B. The SRX Series device streams metadata from the IoT device transit traffic to Juniper ATP Cloud Juniper ATP Cloud.
- C. The SRX Series device identifies IoT devices from metadata extracted from their transit traffic.
- D. The SRX Series device identifies IoT devices using their MAC address.

**Answer: C**

Explanation:

The metadata is used to identify the type of device, its associated activities and its threat profile. This information is used to determine the appropriate security policy for the device. For more information on IoT Security, please refer to the Juniper Security, Specialist (JNCIS-SEC) study guide.

**NEW QUESTION # 47**

You enable chassis clustering on two devices and assign a cluster ID and a node ID to each device.

In this scenario, what is the correct order for rebooting the devices?

- A. Reboot only the primary device since the secondary will assign itself the correct cluster and node ID.
- B. Reboot the primary device, then the secondary device.
- C. Reboot only the secondary device since the primary will assign itself the correct cluster and node ID.
- D. **Reboot the secondary device, then the primary device.**

**Answer: D**

Explanation:

When chassis clustering is enabled and IDs are assigned, it is typically recommended to first reboot the secondary device. This allows the secondary device to fully integrate and recognize its role and settings within the cluster without affecting the ongoing traffic that the primary device might be handling.

Once the secondary device has successfully rebooted and is operational within the cluster, the primary device can then be rebooted. This ensures that the primary device's reboot does not cause any network downtime, as the secondary device, now fully operational, can take over the traffic and roles as needed.

**NEW QUESTION # 48**

You are troubleshooting unexpected issues on your JIMS server due to out of order event log timestamps.

Which action should you take to solve this issue?

- A. Enable time synchronization on the SRX Series devices.
- B. Enable time synchronization on the client devices.
- C. Enable time synchronization on the JIMS server.
- D. **Enable time synchronization on the domain controllers.**

**Answer: D**

Explanation:

To solve the issue of out of order event log timestamps on your JIMS server, you should enable time synchronization on the domain controllers. JIMS (Juniper Identity Management Service) is a Windows service that collects user, device, and group information from Active Directory domains or syslog sources and provides it to SRX Series devices and CSO for identity-based security policies. JIMS relies on the timestamps of the event logs generated by the domain controllers to track user logins, logouts, and IP address changes. If the domain controllers have different or inaccurate clocks, the event logs may have out of order or incorrect timestamps, which can cause JIMS to miss or misinterpret some events and affect its accuracy and performance. Therefore, you should ensure that all the domain controllers in your network are synchronized with a reliable time source, such as an NTP server or a Windows Time service. Reference: = Juniper Identity Management Service User Guide, Juniper Identity Management Service Feature Guide, Configure JIMS Collector to Get Microsoft Event Logs, Considerations for timestamps in centralized logging platforms

**NEW QUESTION # 49**

What information does encrypted traffic insights (ETI) use to notify SRX Series devices about known malware sites?

- A. dynamic address groups
- B. MAC addresses
- C. certificates
- D. **domain names**

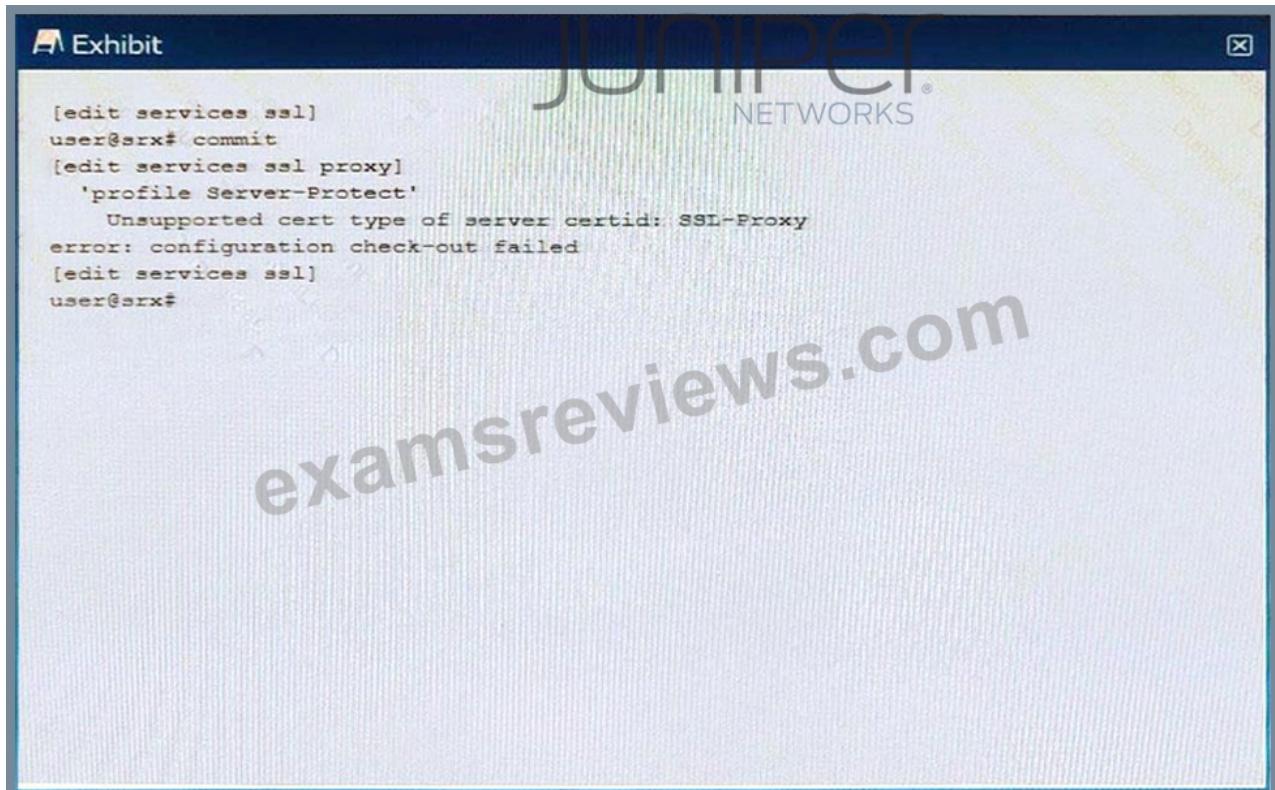

**Answer: D**

Explanation:

Encrypted traffic insights (ETI) uses domain names to notify SRX Series devices about known malware sites. ETI is a feature of the SRX Series firewall that can detect and block malware that is hidden in encrypted traffic. It works by analyzing the domain names of the websites that the encrypted traffic is attempting to access. If the domain name matches a known malware site, ETI will send an alert to the SRX Series device, which can then take appropriate action to block the traffic. ETI is a useful tool for protecting against threats that attempt to evade detection by hiding in encrypted traffic.

**NEW QUESTION # 50**

Exhibit

The image shows a computer screen with a terminal window titled 'Exhibit'. The terminal session is running on a Juniper SRX device. The user is attempting to configure an SSL proxy profile named 'Server-Protect'. The configuration command is '[edit services ssl proxy 'Server-Protect'']'. The user then tries to commit the configuration with 'user@srx# commit'. This results in an error message: 'Unsupported cert type of server certid: SSL-Proxy' and 'error: configuration check-out failed'. The user then exits the configuration mode with '[edit services ssl]' and returns to the main prompt 'user@srx#'. The Juniper Networks logo is visible in the top right corner of the terminal window.

```
[edit services ssl]
user@srx# commit
[edit services ssl proxy]
  'profile Server-Protect'
    Unsupported cert type of server certid: SSL-Proxy
    error: configuration check-out failed
[edit services ssl]
user@srx#
```

When trying to set up a server protection SSL proxy, you receive the error shown.

What are two reasons for this error? (Choose two.)

- A. The SSL proxy certificate ID does not have the correct renegotiation option set.
- B. The SSL proxy certificate ID is part of a blocklist.
- C. The SSL proxy certificate ID is for a forwarding proxy.
- D. The SSL proxy certificate ID does not exist.

**Answer: A,D**

Explanation:

The error message shown in the exhibit regarding the SSL proxy setup indicates an issue with the type of server certificate being used. The error explicitly states, "Unsupported cert type of server certid." Here are two plausible reasons for this error based on the options provided:

Option B. The SSL proxy certificate ID does not have the correct renegotiation option set.

This option points to a configuration issue related to the properties or capabilities of the certificate, such as renegotiation, which if not set correctly according to the expected requirements of the SSL proxy, might lead to the certificate being unsupported.

Renegotiation settings are critical in ensuring secure connections, and mismatches in configuration can result in errors.

Option D. The SSL proxy certificate ID does not exist.

If the certificate ID being referred to in the SSL proxy profile does not exist in the device's certificate store or is incorrectly referenced, the system will be unable to apply the configuration, leading to an error during the commit operation. This situation would typically result in an error indicating that the system can't find or recognize the specified certificate ID.

**NEW QUESTION # 51**

.....

Our company has employed a lot of leading experts in the field to compile the JN0-336 exam question. Our system of team-based working is designed to bring out the best in our people in whose minds and hands the next generation of the best JN0-336 exam torrent will ultimately take shape. Our company has a proven track record in delivering outstanding after sale services and bringing innovation to the guide torrent. Your success is guaranteed for our experts can produce world class JN0-336 Guide Torrent for our customers. You will be bound to pass the JN0-336 exam.
