Are you ready to elevate your career in cloud development to new heights? The Google Cloud Professional Cloud Developer (GCP PCD) exam is a crucial step in proving your expertise in designing, building, and managing scalable and highly available solutions on the Google Cloud Platform. In this comprehensive guide, we'll delve into the key aspects of exam preparation, focusing on the invaluable resource: [GCP PCD Exam Practice Questions](#)

Understanding the GCP PCD Exam

Before diving into the practice questions, let's briefly understand what the GCP PCD exam entails. This certification is designed for professionals who design, develop, and manage robust GCP solutions. It assesses your ability to design and plan the architecture of cloud solutions, manage and provision the cloud infrastructure, and ensure solution and operation reliability.

Why do practice questions matter?

- 1. Exam Simulation:** Practice questions simulate the exam environment, allowing you to get comfortable with the format, time constraints, and the overall structure of the test.
- 2. Identifying Knowledge Gaps:** By attempting a variety of practice questions, you can identify areas where you need to strengthen your understanding. This targeted approach ensures that you focus your study time on the topics that matter most.

New Professional-Cloud-Developer Exam Cram, 100% Professional-Cloud-Developer Exam Coverage

Do you want to pass your exam by using the latest time? If you do, you can choose the Professional-Cloud-Developer study guide of us. We can help you pass the exam just one time. With experienced experts to compile and verify the Professional-Cloud-Developer exam dumps, the quality and accuracy can be guaranteed. Therefore, you just need to spend 48 to 72 hours on training, you can pass the exam. In addition, we offer you free demo to have a try before buying Professional-Cloud-Developer Study Guide, so that you can know what the complete version is like. Our online and offline chat service staff will give you reply of all your confusions about the Professional-Cloud-Developer exam dumps.

The Google Professional-Cloud-Developer exam consists of multiple-choice and multiple-select questions, as well as case studies and coding challenges. Candidates have two hours to complete the exam, and they must achieve a passing score of 70% or higher to earn the certification. Professional-Cloud-Developer exam can be taken online, and it is available in English, Japanese, and Spanish.

Google Professional-Cloud-Developer certification is a valuable credential for developers who want to demonstrate their expertise in cloud application development using Google Cloud Platform. Google Certified Professional - Cloud Developer certification validates the candidate's skills and knowledge in this area and can increase their earning potential and open up new career opportunities. Professional-Cloud-Developer Exam is designed for developers with at least three years of experience in software development and at least one year of experience working with Google Cloud Platform.

Google Certified Professional - Cloud Developer Sample Questions (Q376-Q381):

NEW QUESTION # 376

You have an application running in App Engine. Your application is instrumented with Stackdriver Trace. The `/product-details` request reports details about four known unique products at `/sku-details` as shown below. You want to reduce the time it takes for the request to complete. What should you do?

- A. Store the `/sku-details` information in a database, and replace the webservice call with a database query.
- B. Increase the size of the instance class.
- C. Change `/product-details` to perform the requests in parallel.
- D. Change the Persistent Disk type to SSD.

Answer: C

NEW QUESTION # 377

You have an application deployed in production. When a new version is deployed, some issues don't arise until the application receives traffic from users in production. You want to reduce both the impact and the number of users affected.

Which deployment strategy should you use?

- A. Rolling deployment
- B. Canary deployment
- C. Blue/green deployment
- D. Recreate deployment

Answer: C

Explanation:

NEW QUESTION # 378

Laura is performing a visual inspection of an embedded battery. What kinds of cosmetic issues should she look for? (Choose two.)

- A. Dents or dot imprints
- B. Apple product serial number
- C. UPC Code
- D. Apple logo
- E. Scratches
- F. IATA compliance label
- G. QR Code

Answer: A,E

Explanation:

Explanation/Reference: <https://docplayer.net/50514766-Embedded-battery-safety.html>

NEW QUESTION # 379

You are capturing important audit activity in Stackdriver Logging. You need to read the information from Stackdriver Logging to perform real-time analysis of the logs. You will have multiple processes performing different types of analysis on the logging data. What should you do?

- A. Set up a Stackdriver Logging sync to BigQuery, and read the logs from the BigQuery table.
- B. Read the logs directly from the Stackdriver Logging API.
- C. Set up a Stackdriver Logging sync to Cloud Storage, and read the logs from a Cloud Storage bucket.
- **D. Set up a Stackdriver Logging sync to Cloud Pub/Sub, and read the logs from a Cloud Pub/Sub topic.**

Answer: D

Explanation:

A is not correct because the API has read limits and is not a suitable solution if you have multiple readers.

(<https://cloud.google.com/logging/quotas>) B is not correct because this solution is not real time.

(https://cloud.google.com/logging/docs/export/using_exported_logs#bigquery-availability) C is correct because this solution is real time.

(https://cloud.google.com/logging/docs/export/using_exported_logs#pubsub-availability) D is not correct because this solution is not real time.

(https://cloud.google.com/logging/docs/export/using_exported_logs#gcs-availability)

NEW QUESTION # 380

You have an application running in production on Cloud Run. Your team needs to change one of the application's services to return a new field. You want to test the new revision on 10% of your clients using the least amount of effort. What should you do to keep your service backward compatible?

- A. Replace the current service with the new revision. Deploy the new revision with no traffic allocated. After the deployment, split the traffic between the previous service and the new revision.
- B. Update the current service with the new changes. Deploy the new revision. After the deployment, split the traffic between the current service and the new revision.
- **C. Update the current service with the new changes. Deploy the new revision with no traffic allocated. Split the traffic between the current service and the new revision.**
- D. Replace the current service with the new revision. Deploy the new revision. Create a load balancer to split the traffic between the previous service and the new revision.

Answer: C

Explanation:

Backward Compatibility: By updating the current service and deploying the new revision without allocating traffic initially, you ensure that the current functionality remains intact for all users.

Traffic Splitting: After deployment, you can easily configure traffic splitting between the current service and the new revision, allowing you to test the new field with 10% of your clients while the majority continue using the stable version.

Ease of Implementation: This approach minimizes disruptions and allows you to control the rollout gradually, which is essential for testing and validation.
