Adobe Experience Manager Architect Master Sample Questions (Q75-Q80):

NEW QUESTION # 75

A client has set up branded error pages in AEM to be presented in case of HTTP 400 and HTTP 500 errors on an AEM hosted website. The website pages are under "/content/xbrand/fi/fi/" directory. The error pages are located under "/content/xbrand/fi/fi/error-docs/". The architect notices that the error pages are being invalidated too whenever any other site page is published. Which solution would prevent the error pages from invalidating when publishing any other site page?

- A. Add error pages to the /rule property of dispatcher.any to prevent from invalidation
- **B. Add error pages to the /filter property of dispatcher.any to prevent from invalidation**
- C. Add error pages to the /invalidate property of dispatcher.any to prevent from invalidation

Answer: B

NEW QUESTION # 76

An AEM client requests that an Architect to establish non-functional KPIs. The Architect needs to avoid impacting user experience, asset processing, and download speed while doing this.

How should the Architect measure the performance properly to establish target metrics?

- A. Use the OOTB Explain Query Tool
- B. Tail the Access Log and look for long-running queries
- C. Use the Free Request Log Analyzer Command Line Tool
- D. Use JMeter for end-to-end tests

Answer: A

NEW QUESTION # 77

A financial sector client is using AEM 6.5 on premise. The creative team needs to create the content for the various marketing campaigns that are scheduled. The client wants to use Experience Fragments (XF) to accelerate content creation for marketing purposes.

Which Data flow diagram should an Architect use to communicate requirements to the client network team?

- A)
- B)
- C)
- D)

- A. OptionA
- B. OptionB
- C. OptionD
- D. OptionC

Answer: D

NEW QUESTION # 78

Refer to the exhibit.

A customer with an existing AEM implementation wants to enrich product pages with technical data coming from their PIM system. The PIM system sits behind an API Management solution that publicly exposes the PIM API's as RESTful web services with basic authentication as the security mechanism. Data consistency with the PIM and secure access to the APIs are key elements of the integration.

How should the Architect set up the integration between AEM and the PIM?

- A. Import the technical data into the AEM Author and replicate to Publishers
- B. Integrate the AEM Publishers directly with the API Management solution
- C. Convert the technical data to Content Fragments and expose using Content Services
- D. Use a client-side integration with AJAX from the browser to the API Management

Answer: B

Explanation:

Integrate the AEM Publishers directly with the API Management solution . According to Adobe Experience Manager documentation¹, a direct integration between AEM and PIM can enable marketers and creative professionals to manage eCommerce-related product data and photography within AEM. A direct integration can also ensure data consistency with the PIM and secure access to the APIs using basic authentication²³. Option A is the only diagram that shows how AEM Publishers can directly communicate with the API Management solution.

NEW QUESTION # 79

An architect is leading a cross-functional team in a retail organization tasked with enhancing the online shopping experience. The goal is to render product pages and catalog pages using Adobe Experience Manager (AEM), while keeping the checkout process within the commerce engine. The team is considering different architecture options to achieve this. Given the complexity of the project and
